Introductory: Foundations of Economic and Evolution of Indian Culture	Life
CHAPTER I	
Economic history; its scope and importance; method of enquiry; enquiry as regards India; paucity of literature and difficul-	

ties in reconstructing Indian economic history; date of literary works and their evidence

1-33

CHAPTER II

Early civilization of India; study of environment and natural wealth; economic flora and fauna; mineral wealth

34-66

CHAPTER III

Early history of man and his culture—Palæolithic and Neolithic culture; new discoveries; the Aryans; the primitive Aryans and the Indo-Aryans

67-88

PAGES

CHAPTER IV

Division into periods

89-94

BOOK II

VEDIC PERIOD

CHAPTER I

Aryan settlement and advance; social organisation; caste and profession; the Vedic village; the land of the village; nature of private ownership; royal rights in land; idea of village corporation; growth of towns

97-124

CHAPTER II -

Development of agriculture; cultivated plants; agricultural implements and irrigation; agricultural labour; the agriculturist's ideal; sheep and cattle-rearing; the cow and other animals; hunting and fishing

125-145

CHAPTER III

The growth of arts and crafts; the various crafts; knowledge of and working in metals

146-160

CHAPTER IV

Labour and	occupations	; non-in	dustrial and
menial	occupations;	labour;	existence of
guilds	•••	***	•••

161-168

CHAPTER V

Trade and commerce: maritime trade

... 169-177

CHAPTER VI

Exchange—its methods and mediums; use of gold as medium of exchange

178-190

CHAPTER VII

Socio-economic life in the Vedic age; the Vedic house; food; domestic labour and household economy; the Vedic householder's condition; capitalism; development of landed aristocracy: social inequalities; wealthier classes—their origin; caste divisions; governmental ideal and the concept of social duty ... 191-214

BOOK III

THE SECOND OR THE PRE-IMPERIAL PERIOD

CHAPTER I

Extent of Aryan occupation; growth of towns, trade-routes; sea-voyages 217-229

CHAPTER II	Pages
· /	
Agriculture and village life	. 230-239

Classes of the population; wealth, luxury and charity ... 299-303

CHAPTER X

Character of economic evolution ... 304-305

CHAPTER XI

The state in relation to economic life; taxes and revenue; socio-economic life; gradual transition to state-interference ... 306-313

BOOK IV

SUPPLEMENTARY EVIDENCES FROM THE RAMAYANA AND THE MAHABHARATA

CHAPTER I

Character of the epic evidence; localities of production; internal and foreign commerce; Indian and extra-Indian geographical knowledge; town life; crafts and guilds; agriculture; famines; occupations; the study of Vārttā; general wealth of the country; paternal ideal; labour and wages

317-41

Index ... 343-47

PREFACE TO THE SECOND EDITION

Dr. Narayanchandra Bandyopadhyaya died suddenly, last year, while the second edition of his 'Economic Life and Progress in Ancient India' was being printed under the auspices of Calcutta University. The work was nearing completion when this unfortunate event occurred, with the first 272 pages of the book already printed and the remaining pages 273-341 finally revised by him in proofs. After his sad demise, I received a request from the University for assistance in seeing the rest of the work through the Press. I have taken some pains in going through the proofs already revised by the author himself, corrected a few mistakes which escaped his notice, and added one or two references the omission of which must have been due to some oversight. The page-references in the Index had to be altered for the second edition. This work has been kindly carried out by Mr. Sudhir Ranjan Das, M.A., to whom grateful thanks are due.

It is hoped that a cordial reception will be accorded to this fresh edition of Dr. N. C. Bandyopadhyaya's book by his numerous friends and admirers who regard his untimely death as a distinct loss to Indology.

PREFACE TO THE FIRST EDITION

Since the year 1918, when I was appointed a Lecturer on Ancient Indian History and Culture, I have had to make a special study of Ancient Indian Economic History. The subject was a fascinating one, but a very great difficulty had to be faced, as no one had attempted a systematic study of Indian economic life on scientific lines. Partly with a view to helping my students, and partly to make a systematic study of the subject, I had to work hard. As a result of these labours a synopsis was presented to the students, and the present work is an elaboration of the first few chapters of that synopsis.

In this volume, I have entered upon a preliminary discussion of the object and scope of Economic History and of the importance of the factors which influence the economic life of a people. I have further discussed the foundations of Indian economic life, the peculiarities of the situation of India, and its economic flora and fauna. Next, I have passed on to a study of the history of the races which came to be settled on the Indian soil. Elaborate discussion in regard to these has been avoided, since that will be out of place here. In regard to the periods, I have discarded more or less the old one, and have divided the economic history of India into periods, from a consideration of the economic forces and phenomena characterising them.

Next, I have discussed the main features of Indian economic life during each of these periods. In regard to the Vedic period, I have rather gone into details, as I had to trace the evolution of economic life from the very beginning. In all subsequent periods, only a general survey of economic life has been given with a view to showing the progress at each step, and the causes leading to them. With this object in view I have done my best to give a picture of economic conditions at the end of the Vedic period. In connection with the next period, I have traced the economic factors, and as a result dwelt upon the characteristics of economic life. The growth of guilds, town life, and foreign trade have been fully discussed, as also the forces and factors which brought in the interfering policy of the Maurya Government. In the next period, the effects of the opening up of direct foreign trade with the Western markets has been fully discussed, and towards the close, the causes that led to the decay of Indian political life and the economic decline of India owing to foreign invasions, especially the Musalman conquest.

The present work forms the first volume of the Economic History of India, and the second volume, which will follow, will deal with the next two periods of Hindu India, the manuscript of which is already complete. Moreover, I have taken upon myself the preparation of two complementary volumes dealing with the economic life of India during the Muhammadan occupation and under British rule.

In preparing this work, I have received great assistance from the works of many scholars, whose labours have considerably lessened my task. In regard to the Vedic period, the two volumes of the Vedic Index by Messrs. Macdonell and Keith were of great service to me, as furnishing a storehouse of information so far as the Vedic period was concerned. In regard to the next period, two articles of Mrs. Rhys Davids on the Economic Condition of India, were of great assistance to me. On the subject of Indian village communities and land-tenure, I have received great help from the well-known work of Baden-Powell, while in connection with Indian Numismatics, the first part of the Numismata Orientalia and the second series of Carmichael Lectures have been of some help to me.

I have, moreover, received help from my friend Mr. R. M. Choudhury, my colleague in the Post-Graduate teaching staff in the Department of Economics. He gave me many valuable suggestions, and went through some portions of the manuscript. Mr. S. N. Mitra of the Pali and Vernacular Departments gave me his invaluable assistance by going through some of the proofs and revising them. Mr. S. Kumar of the Imperial Library also did me great assistance by his suggestions.

Further, I am in duty bound to acknowledge my indebtedness to Kumar Dr. N. N. Law, M.A., B.L., P.R.S., Ph.D., himself a scholar of great renown, without whose help the publication of this work could not have been attempted. During one of the saddest

periods of my life, it was his encouragement which enabled me to persevere in this work. His kindness did not end there, and his noble-minded munificence has given this humble work a place in his *Oriental Series*. My best thanks as well as those of all interested in the subject are due to Dr. Law for the publication of this humble work of mine.

Lastly, I owe an apology to the reading public. Some typographical errors have crept in, especially with regard to the diacritical marks. The condition of printing in this country is not of a high level of excellence, and the resources of our printing houses are not very great. I have, however, appended a table of errata which, I hope, will to some extent, remove inconvenience to the reader.

Calcutta, April, 1925. NARAYANCHANDRA BANERJEE

ECONOMIC LIFE AND PROGRESS IN ANCIENT INDIA

BOOK I

CHAPTER I

I

ECONOMIC HISTORY: ITS SCOPE AND IMPORTANCE

The evolution of human culture is intimately connected with the material basis of existence, and man, ever since his creation, has waged an eternal struggle not only to free himself from the vagaries of nature but to provide for his own comfort by modifying the environment and utilising the forces of nature to his own account. All throughout this struggle, there remains an intimate relation between him and the surrounding nature which exerts the most powerful influence on the evolution of his life and thought. The material environment remains the basis of all his activity. He is intimately bound to the soil. The aspects of nature regulate the conditions of his existence and progress. His social life remains intimately connected with the economic factors of production and distribution of his necessaries. He remains, as it were, a conscious and self-asserting though insignificant element in the working of nature's great phenomenatoo weak entirely to resist her influence, and practically dependent on her bounty. At no stage of progress can he free himself entirely from her influence.

Such, indeed, is the history of human civilization, and one who wishes to engage in the study of human society, can hardly neglect man's relation to this material basis, so essential to his life and progress. enquiry of this nature is important from the point of view of the historian, who enquires into the progress of the community in general—the evolution of its life and progress, as opposed to its internal arrangement, the working of its component parts, and the maintenance of internal order, which all come within the sphere of political history. Such a study discloses to him the real man, the man of wants and desires, and not the man of higher ideals or objectives. Anyone who fails to do this must necessarily blind himself to the existence of forces which play so prominent a part in the moulding of human society. The result of such a neglect will make him over-estimate other forces, vitiate his judgment and lead to false generalisations.

The examination of these material factors of human society is reserved in particular for the economic historian who makes it the special subject of his study. It is for him to investigate the material aspect of the problem which faces the social man, and to note his efforts along with the results attained at each stage. Such a study of the various economic facts and phenomena will enable him to disclose the influence of forces otherwise unnoticed and to estimate their effects upon

the social progress. So far as social evolution is concerned this economic interpretation will throw new light in explaining the past and serve as a guide for the future.

Herein lies the importance of economic history. Yet, strangely enough, in the past it hardly drew the attention of historians except incidentally. They used to confine their attention entirely to the political history of a nation, the vicissitudes of its ruling princes and statesmen, the strife of parties, the struggle of armed forces, success or failure of movements, but failed to take into account the economic factors which contribute to man's progress or deterioration and which constitute an essential part of a nation's history in the true sense of the term. As Dr. Price observes, "Until a time not yet removed by any distance from the present day, it was thought no necessary portion of the duty of the general historian to devote substantial sections of his narrative to the economic interests and affairs of the people or the country whose advancing or declining fortunes he was studying and describing. Political changes and constitutional developments, the rise and fall of dynasties and statesmen, the vicissitudes of military and naval conflict filled the canvas and presented tempting opportunities for able draftsmanship or rich contrasted colouring." Such being the state of things, the historian narrated everything but excepted from his attention the materials which directly furnished him with information on the struggles which centre round the real problems of humanity.

Of late, however, changes have come to pass, which,

Changed circumstances. Revived interest in Economic History in comparatively recent times.

in Europe and more recently in the East, have altered the conception of history and also the ideals of humanity. During the close of the 18th century

the cry of political reform put into the background all strife about theology and religion. Everywhere the people asserted themselves and claimed political power, hitherto solely reserved to their despotic rulers. Nations burst the fetters of despotic authority and repudiated the claims of irresponsible legitimacy to rule at its will. Along with these, or perhaps earlier, came the Industrial Revolution, facilitated and made possible by a series of scientific discoveries and inventions which enabled man to utilise the forces of nature to his advantage.

The Industrial Revolution brought about fundamental changes in the organisation and technique of industry. The introduction of machinery widened the scope of large-scale production and directly facilitated the growth of eapitalism, which in its turn deprived for the time being a large number of men of the opportunity of earning their livelihood by means of manual labour. The man of labour passed into the grip of the capitalist and the struggle between capital and labour began.

The antagonism of interests diverted the attention of thinkers to the consideration of forces and factors hitherto neglected. Gradually, the strife for political equality lost its charm and 7, the era of politics passed

into that of social reform," always aiming at the adjustment of the relative claims of the masses and of the classes in a favoured situation. All this led to a revival of interest in the consideration of economic factors in human life, and though there was a tendency to over-estimate these forces, they at length received that amount of consideration which they deserve. This gave an impetus to the study of economic history which makes the study of the various economic phenomena its special business, and assigns them their proper place in human history "amid the throng of conflicting and co-operating causes to which historical effects are due." 1

II

METHOD OF ENQUIRY

In studying the economic life of a community in any age the first consideration with the historian is an examination of the environment in which it lives. In connection with this, he must take into account a number of physical factors which exert so great an influence upon the life of the community. These

¹ Economic history henceforth drew a number of scholars in Europe and in America, and every day the number of such scholars is increasing. We may mention here the names of some of those whose works have become almost classical. Prominent among them are Toynbee, Cunningham and Ashley in England, Wagner and Schmoller in Germany, Bogart and Oman in America, who all deserve the first rank among the pioneers of this I ranch of study.

include the climate and geographical configuration, the nature of the soil, its productive capacity, its peculiar products, the conditions of food supply and such other considerations, to which may be referred the whole of the "external phenomena by which man is permanently affected."

A consideration of these not only enables us to see clearly the extent of that remarkable "influence which in an early stage of society the powers of nature exercise over the fortunes of man," but at the same time helps us in tracing the basic principles underlying the character and development of all societies.

Thus, no civilization can flourish unless the forces of nature are favourable to man and help him in producing his necessaries of life. Where natural obstacles are very great, man's efforts are blasted and the bitter struggle for existence kills the instinct of progress in him. No great civilization in antiquity flourished except in well-watered plains, or in regions naturally fertile or rich. On the contrary, when conditions are favourable to man, he attains an early civilization. The valleys of the Nile, the Euphrates, the Indus, the Ganges and the Yangtse became centres of an early civilization, since, there man was put in circumstances which enabled him easily to attain the necessaries of his life. On the contrary, the bleak desert regions, or those under the scorching sun, or the realms of eternal snow have remained devoid of culture.

Man also is influenced by the climate and configuration of his habitat. His food supply, which depends on the climate and soil, influences him directly and regulates his efforts. Moreover, climate influences his capacity for labour. The rigours of the arctic zone as well as that of the tropics are both detrimental to his progress. In one case the moist heat and the lavish bounty of nature take away man's habit of industry and kill the desire for further progress, as is the case with the tropical regions of Africa; in the other, the extreme cold of the arctic regions similarly affects him. Climate and meteorological phenomena influence at the same time agriculture and industry. They determine harvests and exert the influence on man's temperament and his habits.

Economic conditions, moreover, are influenced by the geological formation of the soil, and the mineral wealth hidden underneath the surface. Thus, in sandy deserts as well as in swampy regions man remains for ever a nomad or a semi-nomad, moving from oasis to oasis or from place to place in search of good pasturage for his flock. In fertile soils, the progress of agriculture is rapid, and fosters a settled life; other industries, too, grow very rapidly; while mineral wealth enables communities to attain an early prosperity and furthers the growth of commerce. In primitive times, civilization was bound up with the wealth of communities in copper and iron. The abundance of these metals contributed to their fighting and conquering capacity and the early growth of industry. In our own days, the influence of metals is far greater. The character or the flora and fauna, too, materially

influences civilization. In some cases, they go to influence the social life or the character of development. Lastly, a nation's proximity to the sea contributes to its maritime and trading activity.

The normal influence of these factors, moreover, is liable to variation, owing to forceschanges in them or through the contact. action of outside influences. A variation of these physical factors modifies the social life. Outside influences, too, act as modifying agents. nation may come into contact with a different type of civilization or social organisation and the influence of such a contact is very great. Such contacts may take place with the migration of communities, the intercourse of one with another through trade or through war. In any case, the changes brought about are often remarkable and history abounds in instances where the contact of one nation with another, either through war or peace, brought in new factors in economic life by introducing new commodities, industries or industrial ideals.

III

ENQUIRY AS REGARDS INDIA

In order to make a systematic study of economic development in India in the earliest part of her history, we must first of all study the physical factors which influenced the growth of Indian culture. With this

end in view, we must study the peculiarities of her situation, the physical character of her landscape and soil, and her climate. We shall next pass on to a consideration of her natural resources, e.g., her natural mineral wealth, flora and fauna, the productive capacity and the character of her soil, and then trace the advent of the race or races, with whom the history of her civilization is so closely associated.

In connection with this human element, we shall enquire in detail as to the state of culture attained by the race or races, of whom we have definite records, at the very outset, and the nature and influence of any outside force.

After a consideration of these, we shall attempt to find out suitable landmarks which may help us in determining the important periods in the history of economic development, and in this connection we shall take chronology into account. A neglect of chronology will be altogether unscientific. It will put obstacles in the way of discriminating the successive phases of development and will introduce confusion in tracing the relation between cause and effect.

We shall next study the chief features of the economic life of the earliest period. In order to do that, we shall have to enquire into the general social condition of the community, the relation subsisting between its various sections, their mode of life and occupations, the state of the arts and crafts, the exchange of commodities and the medium employed therein.

Then we shall pass on to subsequent periods noting the chief economic forces and phenomena and also the nature of any change or improvement which might have taken place with regard to the economic life, or other factors associated with these. In course of this we shall proceed to a consideration of the chief points of study as enumerated above.

The plan thus followed in this work will comprise a systematic and detailed enquiry into the economic condition of India during successive ages and this will include an enquiry into the following heads, with the special purpose of elucidating their importance and bearing on the life of the community:—

- (1) A systematic study of the village—its arrangement, its socio-economic organisation, land tenure, with a detailed discussion as to the ownership of the various classes of land. In connection with this we shall discuss the nature and origin of the village community which has a special Indian interest in it.
- (2) Agriculture—including a description of agricultural methods and operations, e.g., ploughing, water supply, cultivated plants, agricultural labour, the royal share of the produce, and such other topics bearing thereon.
- (3) The chief industries, e.g., weaving, smeltting and working in metals, carpentry,

and other minor crafts; the influence of the growth of industry upon the life of the community; the separation of the industrial element from the agricultural; movement of population from villages to industrial centres, i.e., to towns; the growth of town life. In connection with industry, industrial organisation, labour and the part of capital in industry will also be discussed.

- (4) The various occupations of the people, the evolution of caste on the basis of division of labour.
- (5) The state of commerce, internal and foreign, causes and circumstances fostering it, exchange of commodities, barter, mediums of exchange and metallic currency, money transactions and such other things as are closely connected therewith.

As we proceed we shall discuss the same topic following practically the same arrangement and order for all periods and shall thus be in a position to note the changes introduced during each. Such a procedure will help us not only in following progress in successive stages, but also in tracing from the point of view of comparative study, the relation of cause and effect at each step.

TV

PAUCITY OF LITERATURE AND DIFFICULTIES IN RECONSTRUCTING INDIAN ECONOMIC HISTORY

A systematic Economic History of India during the early part of her cultural development has not yet been attempted. Some scholars have indeed given us fragmentary accounts of particular periods or have dealt with various topics bearing upon her economic life in the past.

The difficulties of reconstruction are very great. First of all, we have to examine the condition of an age far removed from us. There is not only a want of chronology prior to the establishment of intercourse with foreign nations, but also a lack of material directly bearing upon economic life and conditions. In India we are to deal with a people who neglected to keep a systematic account of their political or social activities to speak the least of their economic life. This latter circumstance makes us often entirely depend upon literary records of doubtful historical value of which we hardly know the exact date of composition, and which contain evidences of superposition of different strata of social condition and thought.

As to the want of chronology prior to foreign intercourse we need not dwell at large, since it is admitted by most historians who are engaged in the study of Indian antiquities. But as to the lack of first-hand materials, it is indeed deplorable, when we find

conclusive evidences to prove their existence in the past. The ancient Hindus distinguished as they were by a peculiar turn which made their social system assume a spiritual aspect, hardly neglected to take proper care for the advancement of the material aspects of life.

As early as the immediate post-Vedic period, we find the growth of a literature, forming Lack of literature on in itself, a subsidiary study to the Economics. Vedas and comprising several branches known as the Upavedas. According to the evidence of the Caranavyūha¹ (49th Parisista of the Atharva-Veda), Artha-śāstra was the Upaveda of the Rg-Veda. This is also confirmed by the evidence of the Caranavyūha ascribed to Saunaka.2 The Artha-Veda (as the name of this Upaveda was) was solely devoted to the discussion of means of acquisition of wealth and thus included vārttā and other allied branches of study.3 A later writer,4 the author of the "Sarva-siddhantasamgraha " (ascribed to the great Sankarācārya), has defined Artha-Veda as "solely devoted to the study of that happiness which is consequent upon the proper

¹ tatra Rg-vedasyārthaśāstram-upavedah xlix, 3.

³ For tradition as to the rise of the Upavedas see Viṣṇupurāṇam, Part III, Ch. VI. 29.—Āyurvedo dhanurvedo gāndharvaśceti te trayaḥ | Arthaśāstram caturthantu vidyā hyaṣṭādaśaiva tāḥ ||

The same tradition finds place in the commentary of the Yājñavalkya Saṃhitā, e.g., Āyurvedo dhanurvedo, gāndharva-vedo'rthaśāstramiti catvāra upavedāḥ.

⁴ Arthavedo'nnapānādi-pradānamukhatatparaḥ |

⁻Sarva-siddhanta-samgraha, 13-14, Chap. I.

distribution of food, drink and such other things among the people' and "which thus brings in the fruition of those aims of life which make up the well-known caturvarga, e.g., dharma, artha, kāma and mokṣa.

The study of the Artha-Veda gave rise to systematic treatises dealing with practical politics and the ways of acquiring wealth which came to be known as Arthaśāstras. These Arthaśāstras were many in number, though only one, perhaps the last to be composed—that of Kautilya—has come down to us.

Apart from these there were exclusive treatises on agriculture, cattle-rearing and on the ways of conducting business and trade. All these fell within the scope of Vārttā,¹ the importance of which has been emphasised in more than one place in the Mahābhārata, and in all later works like the Smṛtis, and the Nīti works.² Kauṭilya too quotes his predecessors, and all authorities agree with him in holding Vārttā to be one of the chief branches of study.³ All these presupposes an extensive literature on Vārttā and Arthanīti. In the days of the great Kauṭilya himself a class of teachers known as Adhyakṣas taught Vārttā to students and some of these were granted help from the State. (Vārttāmadhyakṣebhyaḥ—Ar.śā., p. 10).

¹ Krsi-pāsopālye vanijyā ca vārttā. Ar.sā., p. 8,

² See M. V., Santi Parva, Ch. LXVIII, sl. 35—Varttamulo hyayam lokah, etc.; also Kamandaka, Ch. III, 14—Vartta tu jivanam.

³ Anvikṣikī trayī vārttā Danda-nītiśceti vidyāḥ. Kaut., Ar.śā., Ch. I, Bk. 1. See also passages quoted by Kautilya to support the view that vārttā was one of the principal branches of study.

Again, there is reason to believe that separate treatises were composed on the various branches of this important subject of Vartta. No such work has reached us but we find the names of some in commentaries of later works. Thus Sankarārya, the commentator of the Kāmandaka Nītisāra, mentions a treatise on cattle-rearing and cattle treatment by Gautama and Sālihotra (tacca Gautama Sālihotrapranîtām). He mentions moreover a treatise on agriculture by Parāśara (kṛsih Parāśara-proktā vījavāpa-vidhānārthā), another on trade composed by Videharāja (panyam.....krayavikray-asvarūpam vānijyamiti yāvat—tacca videha-rāja-proktam). With the exception of a fragmentary treatise on agriculture ascribed to the sage Parāśara, these works so far as we know are lost.

Portions of their contents seem to be preserved in fragments in some of the Purāṇas or in later treatises which still exist in manuscript. Thus the Agnipurāṇa contains chapters on townplanning, and housebuilding (104-06). The Matsyapurāṇa too contains chapters on the same and other miscellaneous topics (Chs. 257-69). A large number of works of the latter class exist in manuscript and Dr. N. N. Law has prepared a list of these after carefully going through the catalogues of manuscripts made by Aufrecht and other scholars.¹

¹ Dr. N. N. Law (in his article on Vartta—The Ancient Hindu Economics, Indian Antiquary, XLVII, p. 253, 1918) collected a list of printed books and manuscripts, dealing with the subject-matter of Economics. Among these we find a large number of treatises on architecture, on the construction of idols and images, on gems and precious stones. Several deal with the subject of

The sources of information as regards economic condition in ancient India may be classified into (a) Indian, and (b) Foreign.

- (a) The Indian sources include—
 - (1) contemporary or non-contemporary religious, historical, semi-historical, legal and allied literary works from which we know some thing of the social and economic life of the people. Thus we have a good picture of Vedic society from the Vedas and the Brāhmaṇas and some of the Sūtras attached to them. From the Epics, the Purāṇas and the Jātakas too we get much information as to the social and economic condition of

metals and metallurgy, some with trade, some with cattle-rearing and a large number with Silpa.

As to works on architecture some of them are yet unpublished and include works like Manusyālaya-Candrikā, Maya-śilpa, Maya-mata, Višvakarmīya-śilpam, etc.

The books on idols and images are numerous. Similarly many deal with gems and precious stones and it is needless to mention their names. Several of them are very old, as is proved by their being referred to by Hemādri and other old authors. All these however do not furnish us with materials directly bearing on the subject of economic life but it may be of some interest to mention the works on metals by name (e.g., Nos. 86-88 in the list), e.g., the Loharatnākara, the Lohārnava, Loha-fāstra. Another of these treatises, the Nāva-fāstra, throws some light on Shipbuilding and Navigation but the work is fragmentary. On agriculture we have some works in Telugu (Ratta-Mattam) and these contain some observations on the meteorological influences on agriculture.

One treatise, the Manavala-Narayana-Satakam, is a work on the conduct of merchants. Very recently the Travancore Government have published several works on Silpa and architecture and these include the Silparatna Mayamata and several others.

ancient India. But most of these literary works are non-contemporary sources of evidence since most of them describe a condition of society different from that of the period of their composition. The non-contemporary character of these works however does not take away the value of the evidence furnished by them, though we are to proceed cautiously and examine thoroughly the evidence in respect of the time and period to which it refers. This is pre-eminently the cases with the great Epic, the Mahābhārata, which took centuries to be reduced to its present form, and the Puranas which along with the mass of later interpolations, fabrications and alterations preserve some very old and genuine traditions; similar is the case with that mass of popular folklore, later on transformed into the Jatakas or the Birthstories of the great Buddha, written in the Pali vernacular of the day and supposed to have been reduced to their present form in about the fifth century A.D. A critical examination of these stories which furnish us with ample reliable material for the construction of a history of the social and economic life of ancient India shows that whatever be the date of their redaction to their present form they preserve a good deal of that very remote period in which they originated and inspite

of the modifications and alteration which the traditional stories underwent at the hands of the Buddhists during centuries (and which can be traced) they have not materially altered. The Artha-śāstra and the later legal works are sources of information for the period in which they were composed.

(2) In the archæological records we have another great source of information. These include inscriptions of ancient kings and private individuals, and of guilds, ancient coins and monuments. As a rule these are most trustworthy to the historian inasmuch as they furnish him with definite information as to a particular period which is clearly known.

(b) Our foreign sources include—

(1) the evidence of foreign literature containing descriptions of India. From the days of Homer downwards we have accounts of India in the Greek, Hebrew, and Latin literatures, either in fragments or in detail. These, though often fanciful, contain much useful information. Even when such accounts are lacking, the silence of history is broken by the testimony of words. The names of Indian commodities and products occur in the Greek, Latin, Hebrew and other ancient literatures, and the philological

evidence of these words come to our help. Thus the word Sintu in Assyrian meaning cotton goods points, according to Lassen, to its Indian origin. The words Elephant and Kassiteros occur in Homer's poems. Kassiteros means tin and is an exact echo of Sanskrit kastira. Karpas in Hebrew, and karpasos in Greek and carbasus in Latin bearing close resemblance to the Sanskrit word kārpāsa and having the same meaning were borrowed by these nations from the Indians with whom they had commercial intercourse.²

(2) We have moreover accounts of foreign travellers about India from the 3rd century B.C. to a comparatively recent age. Thus, as intercourse ripened, the accounts of Greek travellers and historians multiplied, and many of these like the fragments of Megasthenes, or of his successors supply us with details not to be found elsewhere. Even now they are a store of information for us.

Next to them, Chinese and Moslem travellers visited India, between the 4th to the 10th century A.D. The accounts of Fa-hien, Hiuen-tsang and of Al-beruni throw a flood of light on the social and economic condition of contemporary India.

ON THE DATE OF CERTAIN WORKS AND THEIR EVIDENCE

Before entering into a consideration of the economic condition of India something has to be said as to the date of the works mentioned above and the nature of the evidence furnished by them.

Our earliest information is supplied by those ancient hymns which have been compiled into the various Vedic Samhitās, in accordance with their character and importance and with reference to the various aspects of sacrificial performance. Of these the Rg-Veda contains by far the largest number of hymns written in verse for the use of the hotr priests, while the Sāma-Samhitā comprises hymns which, with the exception of about seventyfive, are mostly the same as in the Rg-Veda, distinguished only by their archaic language and adaptability for singing by the udgātr priests. The Yajur-Veda on the other hand contains, in addition to hymns, sacrificial directions, and explanations which serve as hints to the adhvaryu priests. Lastly comes the Atharvan (Samhitā) collections which comprise in addition to hymns found in the Rg-Veda and Yajur-Veda new materials, compiled together for the use of the brahma priests.

A careful analysis of the material contained in the various Samhitās convinces us of the utter lack of homogeneity in regard to their composition and date. Each of the Samhitās seems to contain several strata

of compositions belonging to different periods and different families of composers. The internal evidence of all the Vedas goes to prove the same. In the case of the Rg-Veda, we have express references to the older hymns and of the older schools of composers by the rsis themselves.1 We have at present no means of classifying the hymns, according to their date of composition, but it is shown by the language of the various sections of the hymns of the Rg-Veda. What is true of the Rg-Veda is true of the other Samhitas. The Yajur-Veda too contains both older and newer materials, the former being as old as or perhaps earlier in some cases than the mass of the Rg-Veda hymns. Even the Atharva-Veda which has been supposed to be the latest production of the rsis contains hymns rivalling in antiquity some of the oldest Rk hymns.

Another point to be borne in mind is that the hymns of the Rg-Veda do not represent the earliest composition of the Vedic Indo-Aryans. A superficial examination of the question may lend support to a contrary view since Rg-Veda seems to have supplied many hymns to the other Vedas, e.g., the Yajus and the Atharva, not to speak of the Sāma which is almost entirely indebted to it.

¹ Thus in the very first hymn of the 1st Mandala of the Rg-Veda Madhucchandas speaks of Agni being worshipped by the older rsis-as well as the new generation of composers to which he-Madhucchandas-belongs. (Agnih pürvebhih rsibhiridyo nütanairntah-R. V., I. 1. 1.) In another place Kasyara, another rsi of the older generation speaks of the worship of Soma with the stotras composed by still older sages (Rse mantrakṛtāṃ stotraiḥ kāśyapodvarayan giralı).

Among European scholars the late Dr. Martin Haug was the first to raise this point, and in the introduction to his Aitareya Brāhmana, he asked whether, "the finished and polished hymns of the Rg-Veda with their artificial metres were the most ancient relics of the whole religious literature of the Brāhmanas." In the course of a discussion of the above question, he showed the high polish of the Rg-Vedic Hymns which no primitive people could use in their rudimentary ritual of a less developed age. After that he compared the Rg-Vedic hymns with the Nivids and the Nigadas contained in the Yajus, which appeared to him to be the older sacrificial formulæ preceding the composition of the Reas. The former were proved to be advanced and well-developed, not only in point of language but also in thought. These Nivids and Nigadas in opinion were the oldest possible Vedic composition that have come down to us.1

In addition to the Nivids we hear of another kind of composition the Āhābas which are referred to in the Aitareya Brāhmaņa (II- 32) but we know nothing of these, nor do they exist either in entirety or in fragments.

A detailed discussion of the importance and the antiquity of the Nivids will surely be out of place here.

¹ The antiquity of the Nivids is proved by constant references to them in the Rg-Vedic hymns. where they are repeatedly described as belonging to an older period. Thus in R. V., I. 89.3, Gotama Rāhugaņa speaks of the worship of Bhaga, Aditi, Mitra, etc., with these old Nivids. (Tān pūrvayā nividā hūmahe vayaṃ Bhagaṃ Mitram Aditiṃ dakṣam asridham). In I. 96. 2, Kutsa speaks of the Nivids in the same strain (sa pūrvayā nividā kavyatāyorimāḥ prajā ajanayan manūnām). Again in the second Maṇḍala Gṛtsamada makes the same reverential reference to the old Nivids (Juṣethāṃ yajňaṃ bodhataṃ havasya me satto hotā Nividaḥ pūrvyā anu, II. 36. 6).

Haug's views seem to receive confirmation when we examine the Rg-Vedic composition from the point of view of social and economic development. The Rg-Veda (as will be shown in subsequent chapters) as well as the other samhitās, do not depict a primitive society. The evidence of these works reveals to us a "ready-made civilization" suddenly springing to our view, complete in all the details of cultural development as may be expected from a society removed from that of ours, by at least four thousand years. This makes us lean towards the presupposition of several stages of advancement, as far as the Vedic Aryans are concerned.

As to the date of composition of the Vedic hymns, it is very difficult to determine it accurately, since they Date of the Vedic furnish no safe chronological data; consequently, we depend entirely on the evidence of language or mythology and we find a difference of opinion among different sets of scholars. Some of these try to prove the comparative modernity of the Vedic age. Here some of their views may be quoted. Thus according to Oldenberg, the Vedic Indians lived at the time of the composition of the Vedas, which formed the earliest sources of their history, by the Indus and in the Punjab, some time about 1500 to 1000 B.C. ("die Religion des Veda," p. i). Next to Oldenberg we have the views of Macdonell summed up in his preface to the Vedic Index (p. viii). He thinks that the upper limit of the age of the Vedas and of the Brāhmanas, i.e., that of the composition of the oldest Vedic Hymn, is not much earlier than 1200 B.C.

There are on the other hand some eminent scholars, who are convinced of the higher antiquity of the Vedic hymns. Prominent among these may be mentioned the names of Haug, Jacobi and Winternitz. Haug's views on Vedic chronology are to be found in his introduction to the Aitareya Brāhmaṇa where he sums up as follows (pp. 47-48, Vol. I):—

"We do not hesitate therefore to assign the composition of the bulk of the Brāhmaṇas to the years 1400-1200 B.C.; for the Samhitās we require a period of at least 500-600 years with an interval of 200 years at least between the end of the proper Brāhmaṇa period. Thus we obtain for the bulk of the Samhitās the space from 1400-2000; the oldest hymns and sacrificial formulas may be a few hundred years more ancient still, so that, we would fix the very commencement of the Vedic literature between 2400-2000 B.C."

Jacobi who based his calculation on astronomical data as well as the Mittani tablets is disposed to assign a date, between 3000 and 2000 B.C., to the origin of Vedic civilization. According to Winternitz the Vedic period may be taken to extend from the earliest times (cir. 2500 B.C.) to 800 B.C., the upper limit having been reckoned by him to be not later than 2500 B.C. The views of Haug thus very nearly coincide with that of Jacobi and Winternitz.

On account, of this absence of proper data, the reconstruction of Vedic chronology will ever present a difficult task to the scholars interested in this subject. A detailed discussion of the same would be indeed out

of place in a treatise which is professedly an enquiry into the economic aspect of the Indian society. For the present, only this much may be said that the estimates of Jacobi, Haug and Winternitz may be accepted as a workable hypothesis.

As to the lower limit, we may roughly take the 10th century B.C. to be the landmark separating the Vedic period proper from the one succeeding it. By that date the Vedic tongue had ceased to be the spoken dialect of the people. The Vedic religion too was fast dying a natural death, in view of the cumbrousness of its ceremonies, and the fast and steady rise of philosophical speculation which we find embodied in the Upanisads and Āranyakas. The society, too, was changing its character.

Next to the Vedic Samhitas, the Brahmanas and the Aranyakas come in importance. These works, as a whole, go to show a stage of social development, which must have been the outcome and expression of various forces, acting upon the community. We find traces of the working of these forces in the Samhitas. Their evidence bears testimony to the expansion of the Arvans towards the east and the south, and their establishment of contact with the races dwelling therein. We get glimpses of a change in the social structure, as also in in the prevailing political ideals and institutions.

The compilation of these works may be referred to a period, ranging from the time of composition of some of the hymns of the Rg-Veda to a period not later than the 10th century B.C. Taken as a whole they may be regarded as post-Vedic, though they seem to contain occasionally very older materials.

the Sūtras and the Upaniṣads. Of the former the Srauta Sūtras may be generally taken to be pre-Buddhistic, and the date of compilation may be taken to range between the eighth to the fifth century B.C. The majority of the Gṛḥya Sūtras were compiled not later than the fifth century B.C. In spite of this rather late composition, they contain traditions and information of the Brāhmaṇa period, and seem to have existed long in the memories of men—the rules being often altered and modified with the social changes and reactions.

The Dharma Sūtras as a class may be regarded as being composed before the fourth century B.C. though the text we now have may contain some later additions. The social condition, the extent of Madhyadeśa as

The Dharma Sūtras. defined therein and the simple state of political organisation, which we find in them, all point to the same

conclusion; and we may safely infer that they give us the picture of a society anterior to the time of the Artha-śāstra of Kauṭilya which we take to be a product of the 4th century B.C.

As to the Sūtras of Pāṇini there are two different dates assigned to them. The first was suggested by Goldstücker, viz., the seventh century B.C. While according to some other scholars they have been placed

in the fifth century B.C. The bulk of the Sūtras, according to the evidence they furnish, appears to have been pre-Buddhistic and may be referred to a period anterior to the rise of Jainism and Buddhism, though they may contain some references to the older philosophical school of the Ajīvikas, first propounded and elaborated by Gosāla.

The objection of those who try to prove the comparative modernity of the Sūtras by pointing to the occurrence of "Yavanas," may be met by identifying the Yavanas not with the Greeks, after Alexander, but with other western nations, with whom the Indians came into close touch in the 7th and 8th centuries, or even earlier.

As to the Pali books, the composition of the Tripitaka in their present form ranges from the fifth century B.C. to the second The Pali works. century B.C. although we may hold it with Prof. Rhys Davids that the Canon, with its Pitaka and Nikāya divisions, was well-known in the time of king Aśoka. The major portion of the first four Nikāyas and the bulk of the Pāti-mokkha rules, and certain books of the Vinaya and the Khuddaka Nikāyas, may be regarded as the earliest portion of the Buddhist Canon and belong to the fifth century B.C., if not earlier. The Vinaya Texts with the single exception of the Parivāra-pātha taken as a whole may be assigned to a period somewhat anterior to Aśoka. The Niddesas. which are the canonical commentaries on the Atthaka and the Pārāyana Vaggas (of the Sutta Nipāta), perhaps

the oldest materials of the Buddhist Canon, may be regarded as being contemporaneous to the time of Aśoka. The Thera and Therī Gāthās in their present form probably belong to the same period. The Jātakas, or as we now have them, the Jātaka-atthakathā of Fausböll, have assumed their present form after successive redactions. Most of the stories are undoubtedly old, older than Buddhism itself. But they underwent modifications at the hands of the monks, and this process continued up till the days of Asoka and the present redaction was compiled in the 5th century A.D. Inspite of this, however, they give us, according to Bühler, a picture of Indian society of a period earlier than the third or fourth century B.C. But in accepting the Jataka evidence we must proceed cautiously and distinguish between the older materials and later additions and modifications without which we are sure to be misguided in respect of the period to which they may be taken to refer to. The presence of modifications and of later elements in the Jatakas has been detected even by Prof. Rhys Davids. According to him, "the whole of the longer stories in the 6th volume are later both in language and in view of the social condition of India they depict, than those in the earlier volumes" (Bud. India, p. 205). The corroborative evidence. however, of the Jatakas is very great and on this we may safely rely.

Next to these we must mention the Artha-śāstra of Kautilya ascribed to the prime-minister of Candragupta, the first Maurya Emperor of India. The majority of competent scholars leans towards the acceptance of the traditional view and agrees in referring the Artha-śāstra to the 4th century B.C. Recently, however, some critics have raised serious objections to the tacit acceptance of that date, and one of them, Dr. Hillebrandt pointed to the use of the name Kauṭilya in the third person in connection with certain controversial points and on its basis tried to prove that the book was not written by Kauṭilya himself but by some of his disciples. These arguments were ably met by Professor Oldenberg. More recently Dr. Winternitz has also advanced arguments in support of the contention that the Artha-śāstra is a work of the third century A.D.

Without entering into a consideration of the points raised by the parties in the controversy as to the date of the Artha-śāstra, it may be pointed out that there is hardly any room for doubting Kauṭilya's authorship of the book. The mention of the author's name in the third person is a peculiar Indian practice which we find not only among classical writers but even among later writers and vernacular poets. The work, moreover, contains clear references to Kauṭilya's authorship in four places.

Statements to that effect occur in the beginning and in the end. Thus in the first chapter we are told that the Artha-śāstra was compiled by Kauţilya after consultting various works.

Thus says Kauţilya, "Kauţilyena kṛtaṃ śāstraṃ vimuktagrantha-vistaram." Again at the end of the chapter on Sāsanādhikāra occurs the following passage:

"Sarvaśāstrāņyanukramya prayogamupalabhya ca / Kauṭilyena narendrârthe śāsanasya vidhiḥ kṛtaḥ." Furthermore, at the conclusion of the work we find the verses—"Yena śāstram ca śastram ca Nandarājagatā ca bhūḥ Amarṣeṇoddhṛtānyāśu tena śāstramidam kṛtam N Dṛṣṭvā vipratipattim hi śāstreṣu bahudhā bhāṣyakārāṇām Svayameva Viṣṇuguptaścakāra sūtram ca bhāṣyam ca ""

Apart from these references to the authorship of Kautilya the style and language of the book, all go to confirm its great antiquity, and we have no reason for rejecting the tradition which connects Kautilya with Candragupta and places him in the 4th century B.C. Moreover, when we consider the picture of social and political conditions furnished by the work, we are sure to come to the conclusion that the work was produced in an age which had seen the rise of Buddhism but as yet that religion had not assumed that importance and universal character which the patronage of Aśoka Maurya enabled it to do. The picture of social conditions are those which may be put down as belonging to a period immediately subsequent to the one described in the Jātaka stories. The picture of political conditions as also of the leading features of Indian Administration substantially tallies with the accounts of the Greeks who visited the court of Candragupta Maurya.

The Milinda-pañha gives us a picture of North-Western India during the 2nd century B.C. just after the downfall of the Mauryas (e.g., the time of Menander) though the present text may be somewhat later.

Next to these, the metrical Dharmaśāstras are of great importance to us. Of these the Manusamhitā holds a pre-eminent place by virtue of its admittedly higher authority and its wider circulation all over India. The present Samhitā bearing the name of Manu is ascribed to his pupil Bhrgu and contains in addition to older materials later additions which bear the stamp of a conservative reaction against the teachings of the preceding age. The period of this reaction seems on closer examination to synchronise with the Sunga-Kāṇva Brāhmanical revival and the saṃhitā as a whole may be referred to that period.

The Yājñavalkya-saṃhitā, which seems to follow the Manusaṃhitā in many respects may be assigned to a somewhat later date, e.g., the 2nd or 3rd century A.D. The Viṣṇu Smṛti, too, belongs approximately to the same period, while the fragments of Bṛhaspati and Kātyāyana may be assigned to the 5th or the 6th century A.D. The Nārada Smṛti which shows a further advance in judicial procedure belongs to a still later date.

As to the Epics—the Rāmāyaṇa and the Mahābhārata—it is very difficult to find out even an approximate date as to their composition, and differences of opinion exist among scholars. As a matter of fact both these works contain materials hardly homogeneous in point of their date or of authorship. The kernel of both seems to be very old, that of the Rāmāyaṇa, going as far back as the 6th century B.C.; while the Mahābhārata

seems to have existed in an abridged form even before the days of Pāṇini. The present epic, which is more of the nature of an encyclopaedia of moral historical wisdom contains undoubtedly later additions to a somewhat older compilation, the bulk of which existed practically the same as they are, in the 3rd or 4th century B.C.

Thus the political teachings of the Rajadharma Parvādhyāya often show a remarkable resemblance to the corresponding chapters of the Artha-śāstra. Many passages exist in common both in the Mahabhārata and the Artha-śāstra. The difficulty, however, lies in separating the older material from the later additions inasmuch as they are so hopelessly blended together. Everywhere we find a superposition of different strata of political thought and often of social pictures of different ages.

In view of these difficulties, our main guiding principle ought to be one of close examination of each chapter, before we proceed to build our theories with the evidence furnished by it. Each separate chapter must stand on its own merit.

After all these, comes the Sukranîti, a work composed in its present form on the eve of the Mussalman intercourse with India, and furnishing us with remarkable evidences directly bearing on the economic and social life of the country. The present work Sukranītisāra seems to have been composed about the 9th century A.D., if not later.

Lastly, we get some really interesting materials from the Purāṇas, the Sanskrit dramas and poetical works and romances, which, though meagre, is of some service to us.

T

EARLY CIVILIZATION OF INDIA

India is one of those countries which have attained an early civilization. From a remote antiquity, the valleys of the Indus and the Ganges became the seat of a culture distinguished by its originality and many-sided development. Alike in the domain of intellectual advancement as also in the arts of material progress this civilization proved its excellence at any early date.

Before the Celts and the Teutons had passed to Central and Western Europe, before the Latins had laid the foundation of the seven-hilled Her early civilization. city later on destined to be the mistress of the Western world, before the Hellenes had learned the arts of civilization, the culture of India had already a long history. Precise information as to the date of its origin is indeed lacking, but evidences seem to exist, which may carry it back to a remoter antiquity—long before the wisest monarch of the ancient world had laid the foundation of the divine Ark of Jehovah, before Assyria had risen into a power and her proud conquerors broke the power of nations and mocked at the pretensions of their gods, before the Egyptians were carrying their arms across Syria, before the Kassites

ruled in Babylon or the Mitannians were settled in North Syria—perhaps to that age when nomadic Aryan tribes were fighting the sturdy Semites or fierce unknown invaders were alternately spreading consternation in Western Asia or settling down to found empires.

As we go on in search of the beginnings of Indian culture we are carried to a region of uncertainty and darkness, with no light to guide our steps or to illuminate the objects of vision. We lose ourselves in the dark labyrinth of hoary antiquity.

With the consideration of that period which falls within the domain of pre-history we are not concerned and our enquiry begins with the age in which records are available. To those interested in pre-history the monotony of their sojourn is occasionally relieved by the find of a few cairns or monoliths containing the relics of primitive man, or the implements with which he attempted to mitigate the hardship of his struggle with nature. These supply him with data to proceed with a scientific enquiry about the evolution of man in the past. But to the ordinary historian, they are of not so great interest as to the enquirer into the history of primitive man, since to the former they supply no basis for chronology or for detailed study of events or the doings of mankind.

When we return to the region of history proper we find the fame of Indian culture spreading far and wide. The adventurous sons of India penetrated into foreign lands and her commodities passed to other countries. By this process contact with other nations was

established and the stories of her wealth became known to the outside world. She became the land of wonder and of plenty. Henceforth references to her are found in the literatures of the ancient world. The Hebrew Chronicler clearly refers to her shores when he speaks of the gold-producing Havilah (Gn. II) or Ophir whence the sailors of Hiram and those from Tarshish (1 Kings X. 11; IX. 26-28) brought Solomon his gold, silver, ivory (shenhabbin), apes (qof) and peacocks (tukim).

Later on the Greeks came in contact with the Indians, and Homer mentions some Indian commodities while Ktesias gives us a description of India though in many places fabulous and fanciful. After him, we find India in the pages of Herodotus, the father of history, who more precisely mentions the Indian fighter in the ranks of the Persian army.

With Alexander began the direct intercourse of Greece with India and from one of the ambassadors of a lieutenant of his—we have detailed descriptions of India of which fragments are preserved in the works of later writers. About the same time, or perhaps earlier, began a direct intercourse of India with China, the Indies, and other lands. Indian missionaries carried the teaching of Buddha to the outside world and India became for a long period the teacher of the ancient world. For centuries reverence was paid to her sages by students from all parts of the civilized world.

A few centuries afterwards decay set in, hordes of barbarians entered and ravaged her soil or settled down to rule the unhappy land. Yet her civilization was not destroyed nor her prosperity interrupted. The conqueror became the captive in turn and yielded to the charms of the prostrate enemy.

Something different however happened in the land from the 10th to the 12th century A.D., when the tide of Saracenic conquest turned to the East and after repeated attempts broke the political power of the race which had long held sway in Hindusthan. With their establishment began a struggle for existence and for the regaining of national independence. This engaged the attention of the Indians and continued with varying fortunes on both sides till the period which saw the dawn of Modern History. This struggle, however, did not destroy the economic prosperity of India. She retained her position and held good her reputation for wealth and splendour. The story of her wealth passed to the other continents. Nations strove to open communication with the coveted land, the stories of the wealth of which had reached their ears, and whence rich commodities had passed into their hands through the exacting merchants of Western Asia.

After repeated attempts their efforts were crowned with success. The Europeans came as traders and later on became the masters of this once-coveted land.

II

STUDY OF ENVIRONMENT AND NATURAL WEALTH

The prosperity of India was largely due to the influence of those physical factors to which we have

referred in the introductory chapter and before we proceed to a study of economic conditions in India, a consideration of these with special reference to India must engage our attention.

In her geographical situation, India occupies a peculiarly advantageous position. She Situation. the middle-most position covers between the two southern peninsulas of the Asiatic Continent. The northern half of this, which may be called Continental India, mainly lies to the north of the Tropic of Cancer while the peninsular region to the south of that line juts out into the sea and stretches about 1,000 miles southwards. The country as a whole lies between the latitudes 36°N and 8°S and between 62° and 96° longitudes. The extreme length from north to south is about 1,800 miles, while the breadth is approximately the same.

This situation was a great advantage to India and contributed to the development of her industry and civilization. Placed in the centre, her people could draw upon the natural resources of the rich archipelago of the East Indies, as well as from the coasts of the African continent. Her adventurous sons took advantage of this, and these two regions became covered with Indian colonies and settlements. Later on as her industry developed, India from her central position supplied the markets of the west and of the far east with her goods.

The natural boundaries of India are well defined. She is separated from the Central Asian region by the

Himalayan wall on the north, while offshoots of the same separate her both in the north-west and in the north-east from the Asiatic Continent. On all other sides she is bounded by the sea. She thus became practically secure from invasions, and though the gaps in the mountain wall admitted free passage to conquering races which succeeded in establishing their supremacy over the coveted plains, the narrowness of the passage made it impossible for barbaric hordes to obliterate the settled civilizations of previous ages.

Thus well-defined and separated from the Continent, India embraces an area of about 15,00,000 sq. miles, being practically equal to the whole of Europe with the exception of the old Russian Empire. Within the vast area are to be found diversities which are hardly met with elsewhere. The different regions vary in physical characteristics, in climate, in topography, in the character of soil, in their products and in various other respects. To the extreme north lies the hilly

region of the Himalayas, varying in Physical characteraltitude from 10,000 to 29,000 feet. istics from the level of the sea. From the

snow-capped hills of this region take rise almost all the river systems of the plain to the south of it. The extreme northern region is a land of eternal snow, and the climate of this system of high lands remains cold? all the year round.

To the south of this region lies the great plain of Hindustan covering an area roughly of 5,00,000 sq. miles, fertile and well-watered by the river systems of

the Indus, the Ganges and the Brahmaputra. In the elevation of the plain we find a sudden drop from that of the hills. In the greater part of the plain the climate is more or less continental, the heat being very great in summer, while the winter is also very cold. The fertility of the soil is increased by an ample rainfall, which rises to a maximum in the east. A portion to the south-west of this plain is comparatively barren, while in the east, the Gangetic Delta is almost a muddy flat of little elevation, and cut up into small islands by the various channels which bring the waters of the Ganges to the sea.

To the south of this Gangetic plain lies the great plateau of the Deccan, surrounded by a system of hilly ridges on all sides. The northern boundary is formed by the Vindhya and Satpura ranges, which along with the Mahadeo hills, the Maikal range, and the hills of Chota Nagpur continue the high belt separating it from the plains to the north. The plateau, which at present maintains on an average an elevation of 1,500 to 3,000 feet is bounded on the west by the Western Ghats, in the east by the Eastern Ghats and on the south by the Nilgiri Hills. The Western Ghats maintain on an average of 6,000 feet, while the Eastern Ghats are comparatively low. This plateau is fringed on the south and east by a belt of fertile plain land.

and this coastal belt forms a separate Geological account. region by itself.

The evolution of these physical characteristics was an event of the remote past-long anterior to the age of human records. In the absence of these the historian must turn to those engaged in the history of the formation of the world, namely, the geologists.

According to geologists the present physical features of India are the result of a series of great revolutions which took place in the remote past, separated from us by an interval which is beyond the conception of the ordinary historian who attempts to record the doings of man in the historical period. Geologists recognize within the area of present day "two dissimilar areas unlike in geological history and equally unlike in the physical features which are the direct outcome of the geological past." They recognize first of all—

- (1) the peninsula, which "withstood all tendencies to earth-folding for as long as the palaeontographical records go back";
- (2) the other area is represented by the regions to the north including even the Himalayan region which had undergone series of changes. We find repeated immersions beneath the ocean followed by upheavals of the land area.

The oldest of the physical features was perhaps the Aravalli range of which only the divested and degraded remnants have survived to our days (which formed a powerful mountain system which existed in Palæozoic times). Moreover in the earliest period this mountain region was flanked by a part of the peninsula stretching from the Aravallis to the present coast. India was thus represented by the Central plateau and the northern fringe of the

Aravalli mountains. To the north of the region was a vast shallow sea which covered the area of Afghanistan, Raiputana and a large part of the present Himalayan region.

In Tertiary times the Gondwana beds were formed, and after the Palæozoic era and during the secondary stage of evolution, the rock area extended over Assam and the Eastern Himalayas, while Burma and the N.-E. Himalayas still remained submerged.

At this time the nucleus of India formed part of a vast continent with which the continent of Africa seems to have been joined together by a stretch of dry land. The evidence of plant and animal life of past ages, as also of their remains found in the two regions now separated by the ocean goes to confirm the above view. (Imp. Gazetteer, I, pp. 85-87). This was succeeded by revolutions in physical geography and as the result of these during the same Tertiary period the Gondwana continent was broken up and the same period saw the rise of the Himalayan mountain system. As a result of the series of volcanic cataclysms 2,00,000 sq. miles of the Indian continent were covered with lava and the present landscape of the Deccan was formed

Towards the close of the period of volcanic activity, there commenced the great upheaval to the north, which resulted in the formation of the Himalayas, the mightiest mountain system. This took place in the Pliocene period. The collected alluvium of ages, the deterioration of rock and gravel on both sides filled up in course of time the shallow gap. Gradually the Indus systems of rivers became distinct, and in historic times, the two great river systems of the Indus and the Ganges were separated and India attained roughly her present shape.¹

This happened in comparatively recent though prehistoric times. According to some geologists this was a gradual process, which completed itself with the close of the Pleistocene period. But it is very difficult to determine when the sea ceased to exist. Most probably it was long before the advent of the Vedic Aryans and their settlement in the plains of Hindustan. The evidence of the Vedic hymns dispels any idea of an inland sea. Nowhere do they speak of an inland sea, nor do they contain any reference to a cataclysm, which might have raised the land and expelled the water. The whole region of advance was dry land, which came to be appropriated and was covered with the Aryan settlements.

Within recent times no great changes have taken place; only certain rivers, especially the Indus, have changed their courses, the area at the mouth of the delta has received some accretions, owing to the deposit of silt, or here or there the coastal area has varied, either owing to the receding of the sea, or to the erosion of the coast.

The general slope of the plateau is from west to the east while the greatest elevation is in the southern angle where lies the high and elevated state of Mysore.

¹ This section is based on the Imperial Gazetteer, Vol. I, pp. 50-87.

The coastal region attached to the plateau forms a distinct portion by itself. Its elevation is very small in comparison with the plateau.

The Indian continent owes much to the great river systems, which supply it with water, add to the fertility of the soil and thus lessens the toil of the agriculturist.

In the Gangetic plain there are two distinct river systems. The one which is probably the older is that of the Indus which rises in the hills to the north of the Himalayan chain and after passing in a north-westerly direction for 800 miles turns southwards; it is then fed by the water of regions which vary in altitude from 10,000 to 18,000 feet. The main tributaries of the Indus are the Sutlej, the Beas, the Ravi, the Chenab, the Jhelum, while the Kabul river which joins it near Attock draws water from the regions beyond the frontier, whence come smaller affluents like the Kuram, with the Tochi and the Gomal. Later on, it passes through the plain of the Punjab and falls into the Arabian Sea.

The hymns of the Rg-Veda show a familiarity with the Indus river system. Not only is the Indus repeatedly mentioned, but the names of the tributaries figure prominently in connection with the advancing Aryans. Not only are the Sutudri, Asikni, Paruṣṇī (Irāvatī) mentioned but we have repeated references to the Kubhā (Kabul), the Krumu (Kurum) and the Gomatī (Gomal).

Apart from this Indus system of rivers, we have two other systems, which though they take their rise in the

Northern region, flow for a time in different directions and after a junction in Eastern Bengal fall into the Bay of Bengal.

The Ganges which is formed in the hill region of Garhwal, by the junction of the Alaknanda and Bhāgīrathī passes in a south-easterly direction. From the north it receives the waters of the Ramganga, the Gumti, the Gogrā, the Gundak and the Kuśī and from the south the waters of the Jumpa and the Son. After passing the Rajmahal hills the Ganges turns south-east and its main course is diverted into two channels. One continues eastward and becomes the Padma, after its separation from the Madhumati to the south of Pabna. The other passes directly south below and after receiving the waters of feeder rivers becomes the Hughli near Calcutta. Like the Indus, the Ganges too is mentioned in the Rg-Veda repeatedly along with the Jumna. In the later Samhitās and in the Brāhmanic and post-Brāhmanic literature, its sacred character is repeatedly inculcated upon.

The other great river of Eastern India is the Brahmaputra which takes its rise in the region of the Mānasasarovar and after passing in an easterly direction for 700 miles takes a south-westerly course through the Assam Valley and after various changes joins the Padma; and the united waters of the two pass into the Bay, through the Padmā and the Arial Khan.

In the Deccan and the Peninsula, two river systems are noticeable. The one comprising the Narmada and the Tāpti falls into the Gulf of Cambay. The other system comprising four almost parallel rivers flows in an easterly direction. They are the Mahānadī, the Godāvarī, the Kṛṣṇā, and the Kāverī.

For the greater part of its length the Indian coast is almost uniform and regular. There are few indentations, and consequently India is very poor in naturally protected landlocked bays or harbours. Only a few of them

The Indian Coast.

exist on the western coast, while in in the east the coast is practically devoid of safe anchorages.

At the present time we have only a few harbours of importance, e.g., Karachi at the mouth of the Indus, Bombay, Goa and Karwar on the west coast, Tuticorin in the south, Madras and Pondicherry on the east coast, the river port of Calcutta in the Delta region and Chittagong in the east.

In ancient times however when the size of trading vessels was not so huge as in our days, a large number of fair-weather anchorages were available. Thus in the 5th century B.C. we have distinct historical evidence which goes to prove that the ports of Broach (Bharu-kaccha) and Surat (Surāṣṭra or Suraṭṭha) were great centres of maritime activity. Later on, we have accounts of the great importance of the ports of Suppāra on the west and of Tāmralipta in Bengal which had by the 5th century B.C. become the port of departure for vessels going to Ceylon and the Archipelago. So also in the days of the Periplus and of Ptolemy were Suppāra (Suppāraka) and Calliena (Kalyan, a few

miles to the north of Bombay harbour), Melizigara and Byzantium (described as a fine harbour). Further south lay Muziris, Nelcynda, and Bacare (Porcad) and Colchi (Korkai) in the Cera and Pandya kingdoms. Even in the east coast lay a large number of ports and safe-weather anchorages, whence the Pandyan and later on the Cola maritime adventurers started to the islands of the Indies either for conquest or for trade.

The mariners of ancient days moreover took advantage of the surface currents or drifts which even now affect the coasts of India. They utilised also the monsoon winds, the importance of which has now

rents.

been reduced to their rain-bearing The great monsoon wind and coastal curagency. These surface currents which now run along the west coast from

north to south, and vice versa, on the eastern side, during the South-West Monsoon, facilitate the coasting trade. During the North-East Monsoon the current was reversed. The mariner took advantage of both during the respective seasons for his outward journey and for his return home.

Next to these currents and drifts of the sea, the monsoon wind is of great importance. The monsoon wind current was of great service to the trader of ancient times. The South-Western Monsoon helped the journey from the African coast or other countries to Western India. It also helped the mariners of India who engaged in trade with the Eastern Archipelago, while the North-East Monsoon facilitated a return journey. According to Pliny, the existence

of the air-currents was discovered, so far as the Græco-Roman world was concerned, by the Greek sailer Hippalus, and this contributed to the growth and the volume of their trade with India. The Indians, however, seem to have known it centuries ago, and utilised these winds to facilitate the journey of their sailing vessels.

The monsoon wind brought, as it brings in our own days, the charge of moisture which converted into rain, helped the agriculturist who devised his seasons for ploughing and sowing, accordingly.

The soil of India, which has not changed much within historic times, varies considerably in the different regions. Generally in the plain of the North it consists mainly of alluvial deposits. Geologists believe that

the whole plain has been produced by the deposit of the fine rock crumblings brought down by the two great

river systems. In the region of the Delta, the soil is entirely clayey, with very little rocky matter in it and is black in colour; while in the plain of Hindustan, the soil contains rock crumblings and mineral matters.

In the Deccan, the soil varies considerably. In the so-called Deccan Trap, which contains by far the so-called black cotton soil, it is mainly basaltic rock, and is supposed to have been of volcanic origin. This soil is dark in colour and very fertile, and its water-bearing capacity is very great. This covers the whole of the north-western part of the Deccan and embraces two-thirds of Kathiawar.

In other parts of the Deccan and a part of the tract to the north of Kathiawar, the soil cosists of hard crystalline Archaean rock. The soil here is light and porous. The rain enters easily and is passed down to the subsoil.

In addition to these there are regions where the soil is sandy. This is the case in a large part of the region to the south of the Indus Valley. A large part of Rajputana is sandy desert.

Forests exist even now in large tracts of India. At present the forest areas include Forests. a large part of the Tarai Region, the Assam Valley, the Sunderbuns, and a large part of Central India and Chota Nagpur.

In ancient times the forest area was much larger. In fact the early inhabited settlements were but islands in the midst of the forests. The Vedas speak of forests repeatedly. In the Buddhist literature we hear of the Mahā-Kalinga forest to the west of the Orissa sea coast. The Rāmāyana describes the forest region to the east and south of Mithila which was then the home of the savage enemies of the Aryan race. Pancavati and practically the whole southern region was a dense forest in those days. A large part of the Maratha country formed till a very late period the celebrated Dandakāranya, which was cleared only in historical times. The region of the Vindhya hills too was covered with forests and we have innumerable references to the state of affairs in the forest regions in Indian literature, and only in recent historical times they have been partially cleared.

These forests of India are of great economic value, and even now the Government derives a large revenue from them. In ancient times they were of great. service to the people. The forests supplied the early builders with timbers to build their houses with. The Sal (Shorea robusta), the Sisoo (Dalbergia Sisoo), the Black wood of Malabar, the Deodar, and the Pine were of great service to man.

In Malabar, the Sandalwood grew wild and it was largely exported to the other countries of the ancient world. A large number of other forest products were also valuable. Thus the Myrobalam furnished tanning material. The Bamboo, the giant grass, supplied building materials to the poor. A large number of forest trees and shrubs were utilised for their medicinal properties. Canes and creepers were used for basket making. Smaller trees furnished fuel in an age when coal was unknown.

The high economic value of the products of forests was recognised by Indian princes, and as early as the 4th century B.C. the forests came to be regarded as state property. State officers not only collected the timber, and other produce, but established manufactories for producing various articles of use wild animals too were state property. Game laws were introduced and indiscriminate hunting forbidden. The elephant was used in war. The skin of ferocious animals was collected. The deer was hunted for its flesh

TTT

ECONOMIC FLORA

The fertile soil of India is capable of bearing large crops of food-grains and other useful plants. We have evidences to prove that a large number of such plants was either native to the Indian soil or came to be cultivated from remote antiquity. The following are the chief among these:—

RICE (Oryza Sativa).—Now practically forms the staple food of the people of many provinces of India, and was indigenous. De Candolle thought it to have been cultivated in China as early as 2700 B.C. Its chief wild habitat extends from South India to Cochin China. Lyall seems to believe in an early cultivation of rice in India and compares its foreign names, e.g., Persian Virinzi, Arabic Aruzz, and Greek Oryza, with the Vedic Vrīhi.

Wheat (Triticum Vulgara).—The history of its cultivation goes as far back as the Vedic period though some scholars deny mention of it in the hymns of the Rg-Veda. De Candolle thought its cultivation to have been pre-historic and almost general throughout the pre-historic centres of civilization. Heer found it in the remains of the habitations of the lake-dwellers of Switzerland. Unger found it in an Egyptian pyramid of 3400 B.C. Philological evidence proves its knowledge

34848

among almost all the ancient nations. Probably its cultivation was introduced by the Aryan immigrants who found the soil and climate capable of producing it.

Barley. (Hordeum Vulgare; Sans. Yava, Old Per.

Yao).—To this plant, which is one of the earliest to be cultivated by man, we find the earliest references in the Rg-Veda which contains the word Yava. Some scholars have taken it in the sense of grain in general. The cultivation of Yava, which has been identified by De Candolle with the Indian Hexastichum variety, is even now carried on in large areas of modern India.

Millets.—At present the chief millets grown in India are the Jowar Cholum, the Cumboo or Bajra and the Ragi. All these, which require much less water than rice or wheat, seem to have been extensively cultivated from an early period. Regarding the sorghum vulgare there exists some doubt as to whether it was indigenous to India. The case of some other varieties of millets (Miliaceum) is not so much open to doubt. As to the Ragi, Watt 1 says, "There is perhaps no doubt that as a cultivated crop it (Ragi—Eleusine Coracana) originated in India."

A large variety of pulses, too, was cultivated even in the earliest times. It is difficult to find out whether they were indigenous to India, but there is no doubt that their

¹ Watt, Economic Products of India, p. 1032.

cultivation goes back to the period of the Samhitās other than the Rg-Veda. These latter mention the Mudga (Phaseolus Mungs), Māṣa (Phaseolus Radiatus), Masūra (Ervum Hessutim), and Kulattha (Dolichos Oliflorus).

Next in importance to the food-grains, we have important fibrous plants. These were of great service to humanity since they supplied man with materials for clothing and thereby protected him from the extremes of heat and cold. In India, not only do we find a large number of such plants but most of these seem to have been indigenous to her soil where they were earliest cultivated and whence the world learnt their use. Chief among the fibrous plants of India are the following:—

Cotton.—Pre-eminent among the fibrous plants is cotton which was indigenous to India and from her soil, its knowledge and cultivation spread to the rest of the world. This would appear from the fact that the name of this plant has been borrowed by all the nations of antiquity from India. Thus Sanskrit Kārpāsa became Kapas in Hebrew (and this word was used to designate the green hanging in the Book of Esther) and Carpasos or Carbasos in Greek and in Latin. The earliest Greek information about this is furnished by Ktesias and later on by Theophrastus and Herodotus, whose way of describing it as the 'wool of trees' showed Greek ignorance about it. We have no information about its

cultivation elsewhere—not even in China, where it is believed to have been first cultivated in the 13th century A.D.; neither in Egypt, though Lassen once supposed the Mummy cloth to have been cotton, but this has been refuted by Mr. Thompson, the Kew expert (J.R.A.S., 1898, pp. 250-51).

The earliest mention of cotton is in the Āśvalāyana Srauta Sūtra (VI. 4. 17.). The absence of the word kārpāsa in the Vedic literature proper may be explained by the fact that the Aryans had not by that time reached the cotton-producing districts in the south or in the east.

WHITE COTTON (Simula or cotton silk. Erodendron anfractuosum).—Though doubtfully indigenous, its cultivation goes to the Vedic period and it has been since then of great service as furnishing material for pillows and is mentioned in the Atharva-Veda.

Sana hemp (Crotalaria juncia).

Sana hemp (Crotalaria juncia).

Sana hemp (Crotalaria juncia).

Sana hemp (Crotalaria juncia).

Period. It is mentioned in the Atharva-Veda (II. 4. 5.) as growing in the forest. It is also mentioned in the Satap.

Br. (III. 2. 1. 11; 1. 6. 1. 24) and in the later Sūtras.

Linen (Linum usitatissimum).—Its cultivation and use seem to go back to the Vedic period.

Linen and Flax Its various names are Atasī, Umā and Kṣauma. Suśruta also speaks of the medicinal properties of Atasī oil. Later authorities repeatedly mention it.

JUTE (Corchorus).—Variously called by different authors and identified by some with Skt. Patta, or Kālaśāka. Originally indigenous to India and parts of China, its cultivation all throughout historic period has been mainly confined to Bengal.

Sugar-cane (Saccagarum officinarum).

Sugar-cane (Saccagarum officinarum).

Sugar-cane (Saccagaof varieties. It has been an important
indigenous plant. According to Watt
at least five such grasses were natives of India, one of
the chief among them being the Saccharum officinarum
which is mentioned as early as the Atharva-Veda.

(Atharva-Veda, I. 34. 5, mentions Ikṣu; see also XII.
2. 54; XLII, 100, 277.)

Sugar from the juice of this plant was preeminently an Indian commodity, and there is reason to belive that the rest of the world derived their equivalent of sugar from the Indian Sarkarā. (Compare Arabic Shakar, Latin Saccharum, French Sucre, Eng. Sugar.)

Of oil bearing plants which have been indigenous to India, or have been cultivated since the remotest historical period, are the following:—

TILA.—According to Sir George Watt it may be regarded as indigenous to India. It has been cultivated from the earliest times, being repeatedly mentioned in the Atharva-Veda (A. V., II. 8.3; XII. 2.54;

XVIII. 3. 69,; XVIII. 4) and in other Samhitas. In the historical period it was regularly exported from India, its importance being due to its oil.

Castor.—Probably a native of India from the earliest times. Its cultivation goes back to the later Vedic period, being first mentioned in the Sānkhāy. Ār., XII. 8. Suśruta mentions the medicinal properties of its oil.

Mustard seed (Brassica Campestris and but it may be regarded as a native of India. Its cultivation too goes back to the close of the Vedic period, and is first mentioned in the Brāhmaṇa literature (Chāndogya, III. 14.3; Ṣaḍviṃ. Br., V. 2; Sāṅkhāy. Sr. Su., IV. 15.8).

Mahua.—Valued, even now, for its oil and its use Mahua (Bassia latias foola) or Madhuka. are mentioned in Suśruta, Caraka and other works.

Cocoanut (Cocos nucilera).

Cocoanut (Cocos nucilera).

Coast, and Bengal. Its importance has been very great and it has been repeatedly mentioned in early literature.

Of spices and aromatic plants we may mention the following, the cultivation and importance of which is mentioned in the historical period. Some of these

plants were natives to the Indian soil, while a large number of them was brought from the neighbouring islands, by the adventurous Indian sailors of antiquity.

PEPPER.—Lassen derives its Greek name Peperi and Latin name Piper from the Sanskrit Pepper (Piper Pippali. It was extensively cultivatnigrum). ed in the west coast of Southern India from the earliest times. According to Schoff (Periplus, pp. 213-14), its use was unknown to the Egyptians and Hebrews, and it was the Dravidian merchants who carried it to the Westerners. It was an article of export to the Western market and its trade brought unheard-of profits to Indian merchants. According to Pliny, 15 denarii were offered for a pound of pepper (Pliny, XII, 14). Alaric demanded 3,000 lbs. of pepper along with gold and silver for raising the siege of Rome (Gibbon, Decline and Fall, Ch. XXXI).

Cloves.—Its mention in Indian literature goes back to the days of the Rāmāyaṇa and Caraka. Its name Lavanga, derivable from Malaya Leh-bang, suggests according to some authorities that it was brought from Malaya. The historian Paulus Æginata states that it was brought to Rome from India.

Cardamom (Eletaria both varieties, major and minor, grow wild. It was also an article of export to the Western markets.

CINNAMON.—It is doubtful whether it was originally a native of India. In historical times, however, it was brought from the Spice Islands, cultivated and exported.

Saffron (Crocus sativus).

Saffron (Crocus sativus).

Saffron (Crocus its cultivation is now confined to the valley of Kashmir, so far as India is concerned. This can be traced back to the post-Vedic period. Kunkuma is mentioned in the Suśruta Saṃhitā, and in some other medical works where we find its medical properties described.

Costus.—Root of Saussuarea Lappa, native of

Kashmir and north-Indian hills, is

mentioned as early as the Atharva

Veda (Kuṣṭha). Not to speak of its medicinal properties
it was highly prized by the Romans as a culinary spice
and as a perfume, and was exported to Rome from
India (Pliny, XII, 25).

Spikenard (Nardostachys Jatamanisi). A perennial herb of the Alpina Himalaya, it was probably introduced in India proper, from the hilly regions where it was grown. Its earliest mention is to be found in the medical literature of the Hindus. Nalada or Naladi is mentioned in the Vedic literature (V. I., 1, 437).

The Atharva Veda mentions Aja-śṛṅgi, $Arāṭak\bar{\imath}$ and $T\bar{\imath}kshna$ -śṛṅgi along with these aromatics.

NARD.—Leaf nard was exported from India to the Roman markets, and was sold at the rate of 40 to 75 denarii per lb. Spikenard held the foremost place among the ointments of the day (Pliny, XII, 26; also Mark XIV; see Schoff's note on the Periplus, pp. 188-89). So also was Khushus (Vetiveria odorata) important for aromatic properties.

GINGER.—It was also a native Indian product, and from India its use probably spread to officinale. Some other nations. This would appear from philological evidence, which shows that the name of this plant in many languages is derived from its Sanskrit equivalent. Thus, Sanskrit Syngivera becomes Zanjabul in Arabic and Zingiber in Greek. The word Syingivera has been supposed by some to have been of Dravidian origin while others would like to regard it as a hybrid of Skt. Synga and Drav. Vera meaning 'root.'

TURMERIC.—It was grown in India from earliest times and many nations learnt its use Turmeric (Curcuma, from the Indians. Thus Sanskrit Haridrā is transformed through the Persian into the Arabic Al Hard.

Colour-Bearing Plants.—Of these, the chief in antiquity was indigo, identified by Colour-bearing plants (Indigoferra-tinctoria). De Candolle with the Nīlī of classical literature. Most probably, it was an indigenous plant of the Indian soil, though many varieties of it exist wild in the tropics. We have no

evidence to prove that any other country grew this plant in antiquity; and hence the ancients called it Indicum. It was valued in the western world for its rich colour and medicinal properties and was largely exported to the western markets (Pliny, XXXV, 25-27).

Its supposed presence in the wrapping cloth of Mummies led Royle to suppose that trade relations existed between India and the land of the Pharoahs in the 3rd millennium B.C. The presence of Indigo has been chemically tested and proved to be beyond doubt (J. R. A. S., 1898, p. 250).

In the Periplus, it is mentioned as exported from Barbaricum (Schoff's note, see pp. 172-73).

Sandalwood .—Another important Indian plant was the Sandalwood tree, a native of the hills of South-Western India, e.g., the regions of Mysore, Coorg, and the Nilgiris.

From a very remote antiquity, sandalwood was exported to the markets of the world. It is supposed by some scholars that the *Sonter* incense mentioned in the records of the naval expedition to Puanit in the reign of queen Hatsepsitu of Egypt is nothing but Malabar Sandalwood (Santalum album).

Other important Indian plants include varieties of fruit-bearing trees and plants. Of these, we may mention the Mango tree (Mangifera Indica), the Jackfruit tree (Artocarpus Integrifolia), Plums (Prunus, etc.), various kinds of Apples and Nuts, varieties of Palm, including the Areca and Date palms, the

Plantain (Musa Sapientum), Grapes and varieties of Orange, Citron and varieties of Melon.

The cultivation of Grapes goes back to a period anterior to the 7th century B.C. Grapes are mentioned in the Sūtras of Pāṇini, which speak of Kapiśā being the premier vine-growing district of India.

The vegetables indigenous to India vary in its different parts and are too numerous to relate. Varieties of sweet and bulbous roots too existed from the earliest times.

Along with these must be mentioned two other Indian products of importance, e.g., the Silk-worm and the Lac insect.

SILK.—It is very difficult to trace the introduction of silk in India. Silk-worm was cultured in China as early as the 28th century B.C. and, according to some

historians, a Chinese princess married to a Khotan prince, secretly carried with her the silk-worm and the Mulberry plant. Some scholars attribute the introduction of silk in India to an intercourse with China, of which, there is reason to believe, the earliest evidence goes back to the 6th century B.C. There is, however, evidence to prove that varieties of the silk-worm existed in the Eastern part of India, e.g., in North Bengal and Assam, and these regions are a continuation of the habitat of the silk-worm.

At present, the following three varieties of silk Saturnaldæ, e.g., wild silk, exist in Eastern India; e.g., the Tasar (Antheræa paphia) mainly of Bengal, the

Muga (Antheraea assama) of Assam and the Endi-(Attacus ricini). Most of these depend on nature and hardly require any human care. We have references to the large use of silk from the seventh century B.C. Silk is mentioned in the Sūtras of Pāṇini, in early Buddhist Literature (Koseyam), and in the Kauṭilīya Arthaśāstra which mentions indigenous silk fabric along with the produce of China (Cīnapaṭṭaḥ and Cīnabhumijāḥ).

Various plants suitable to the growth of the worm existed from time immemorial.

THE LAC INSECT.—The lac insect was endemic in India and even now is confined to her soil. The word $L\bar{a}k\bar{s}\bar{a}$ occurs in Vedic literature, being first mentioned in the Atharva Veda. References to $L\bar{a}k\bar{s}\bar{a}$ are numerous in the Sūtra literature as well as in the Epic and poetical works.

IV

ECONOMIC CONSIDERATIONS ABOUT THE FAUNA

The animals of India, both domestic and wild, are numerous and varied. India was blessed with the soil and climate capable of bearing animals useful to man.

Cattle.—At first the mass of Indian population was pastoral. They paid great attention to the growth and improvement of cattle, which formed their chief wealth during the Vedic period. The cattle wealth of the Punjab has been very great even up to our own days. As in our days, sheep and goats were reared on large

scales. The wool-bearing sheep of the Gandhara and the Parusni districts is repeatedly mentioned even in the Rg-Veda. Later on, the Himalayan regions became the chief source of wool. Sheep and goats were largely used for food. Wild goats were common. Horses were common in almost all provinces, though in Indian literature those of the West and North are praised. This condition prevails even now. The domestication and use of the horse was extensive even in the Vedic period. They were used for riding and transport purposes, both in peace and war. Asses and mules were also kept and used for various purposes. Horseracing was an important amusement.

Camels were either natives of the desert regions or brought into India at an early date. Even in the Vedic period, we find them drawing waggons or bearing burden (A.V., XX., 127, 132).

Buffaloes were used for domestic purposes. Like cows they were domesticated in the pre-Vedic period. Apart from milk-bearing, their flesh was used for food.

The taming of elephants was complete in early Vedic times, or even earlier. They were used in war, and also for other purposes.

With wild animals we are not so much concerned, though, as a matter of fact, the early settlers found it very difficult to hold their own against the lion, tiger, panther or leopard, bear, wolf, hyæna, jackal, wild boar tusked elephant, rhinoceros and wild buffalo. In course of time these ferocious enemies were put down. The skin of animals was used for household purposes, the wool of some was made into blankets, while the flesh of the deer, boar, goat, and even of the rhino was eaten. The thick hide and horn of the rhino and the tusks of elephants were used for various purposes and exported to the markets of the West. The tail of the yak was made into chauries, while from the musk-deer was extracted the aromatic substance known as Musk (moschus moschiferus).

Fishing.—Another asset of nature has been the excellent and abundant supply of fish from the rivers. Even now the supply seems to be inexhaustible. Fish-eating in all the provinces, especially in the east, gave an opportunity to many to earn their livelihood by fishery, and even in the Vedic period fishermen formed a caste.

Pearl-Fishery.—Oyster pearls are found in many Indian rivers not to speak of pearlbeds on the sea coast. From an early period pearl-fishery on the coast of Ceylon and the eastern coast of Southern India was a profitable business. The Indian pearl found its way to the Western markets and fetched a high price.

V

MINERAL WEALTH

Mineral Wealth.—India at present is regarded as considerably rich in minerals. She is found to contain not only large quantities of Gold, Copper and Iron, but also

Coal, Manganese and Mica in abundance. Owing to the lack of effort on the part of the people and want of up-to-date machinery and organisation, she is not in a position to take the place she deserves among the industrial nations of the world.

In ancient days, when neither the use of coal nor that of many other metals was known, she was considered to be rich in mineral resources. Her people learnt the use and the method of extracting various metals and we have even now the remains of the earliest mining centres. The Vedic inhabitants used gold for various purposes, the metal being obtained mainly from river washings. Later on, other centres of the gold-bearing quartz were discovered mainly in Southern India. Towards the close of the Vedic period, the Aryans became familiar with Zinc, Copper, Tin and Lead in addition to Gold, Silver and Iron.

The Greeks, when they came to India, were struck with the mineral wealth of the country. Megasthenes says (Frag. 1) that "While the soil bears on its surface all kinds of fruits known to cultivation, it has also underground numerous veins of all sorts of metals, for it contains much gold and silver, and copper and iron in no small quantities and even tin and other metals which are employed in making articles of use and ornaments as well as the implements and accourrements of war."

Several later authorities speak of the presence of silver mines in India, which is corroborated even by Moslem writers.

Copper too was extracted in various localities. Iron was found in large quantities and from it was made excellent steel, which found its way to the land of the Hebrews, Syria and Arabia, as we shall see later on. As regards iron, India is now-a-days regarded as very rich, and laterite, hæmatite, magnetite ores are found in abundance.

Of the sources of other metals mentioned in early Indian literature, we have but little information, e.g., Mercury, Tin, Lead, Zinc; probably there existed mines which are now no longer worked. Sulphides of Antimony and Arsenic were found in large quantities, and are even now abundant.

Precious Stones.—India is and was rich in precious stones; Diamond mines existed in India but they are now supposed to be exhausted. Sapphires, and Topazes too were found in various places and varieties of precious stones were exported to the Western markets. We shall speak of them in detail later on.

Salt.—Salt mines exist in many places in India. In ancient days, salt was obtained from sea water, mines of rock salt, and from salt lakes. The output of salt mines on the Punjab border or of the Sambhar lake supplies the needs of more than half of India. In the days of the Mauryas salt mining was a Government monopoly.

Alkali deposits of crude Potash and Saltpetre existed and are found even now in various places in India.

CHAPTER III

EARLY HISTORY OF MAN AND HIS CULTURE

I

It is difficult to determine even to a degree of approximation the date of the advent of man in a country like India, so favourably situated and provided with the bounties of nature. We have no history of the races of men who dwelt there, until we come to the accounts of the settlers with whom the intellectual and material advancement of the country is so closely bound.

The advent of the so-called Aryan settlers (cir. 3000 B.C.) is a mystery and still more the circumstances of their progress and advancement. They spring into our view all on a sudden with a highly developed civilization, and with an amount of culture hardly inferior to that of any of the contemporary sections of mankind.

Previous to the Aryans, various races of men dwelt in India. Pre-historic archæology records the existence of man in the Palæolithic and Neolithic ages. Records of the palæolithic period as also of the succeeding age are however very scanty and ossiferous caves bearing the remains of primitive men are very rare. Hacket found an ovate instrument of chipped quartzite at Bhutra lying in undisturbed post-tertiary gravels, and containing the bones of *Hippopotamus Namadicus* and other extinct animals. Similar primitive instruments,

of agate, quartzite or laterite have been found by Wynne, Bruce Foote, Carlleyle and other scholars in various places of Northern and Southern India.¹

Neolithic.—Remains of the Neolithic period are greater in number and the labours of Neolithic. indefatigable scholars like Bruce Foote, Cockburn, and Carlleyle have been rewarded with such finds all over India, though such remains are scantier in the Punjab and Bengal. They consist not only of stone implements, early pottery, and other dugout remains from mounds which are presumably the sites of neolithic communities but also of ruddle drawings.2 Of the first, we have innumerable specimens found throughout India in the shape of flint knives, hammers, and broken celts of various types. Of the second class we have in the records of Bruce Foote an account of neolithic settlements and even of implement factories.3 According to the same author, the circular cinder mounds in the district of Bellary represent the remains of neolithic age.

Apart from these implements, we have sepulchral remains of the neolithic period. Not only do we have human skeletons in various detached graves, but, also have innumerable sites, which seem to have been the burial places of ancient communities.⁴ They are nume-

¹ See Imperial Gazetteer, Vol. II, pp. 90, 92; also the work "Foote Collection of Indian Pre-historic and Proto-historic Antiquities," by Mr. Bruce Foote, Madras Govt. Press, 1916.

² See Cockburn's article, J.R.A.S., 1899; also Imp. Gazetteer, II, p. 94.

³ Imp. Gazetteer, II, pp. 93, 94.

⁴ Ibid., II, pp. 95, 96.

rous in Southern India and are in themselves objects of close study.¹

The above evidences as regards the paleolithic and neolithic men are but of little interest to the student of economic history, though they help us in solving greater problems connected with the early history and distribution of mankind. As we leave the neolithic period and come to the age of the use of metals, we meet with evidences which throw light on the history of the culture of races, who dwelt in the various regions of India in comparatively recent yet pre-historic times.

The Age of the Use of Metals: Copper Age. During the age immediately succeeding the neolithic period, India seems to have been peopled presumably by a race or races of men who were not only acquainted with the use of metals, but had attained a high civilization. Next to the races who had attained the neolithic culture there came a race, who though not familiar with the use of bronze, seems to have known the use of copper and some other metals, and it is inferred by many that the use of copper intervened between that of stone and iron. This is the view of the late Dr. Vincent Smith, whose article on the Copper and Bronze Implements in India 2 appeared in 1905. His theory is based on an examination of the finds in Gungeria in Central India in 1870. The finds consisted of a large number of copper implements including some bar celts two feet long and a number of silver plates and animal

¹ Imperial Gazetteer, II, pp. 95, 96.

² Indian Antiquary, 1905.

figures weighing 8 lbs. The bar celts resembled those of Peruvia, Babylonia and Egypt. Dr. Smith summed up as follows: "A remote date must be assigned to both the copper tools and the silver ornaments. The Irish celts many of which are identical with those of Gungeria specimens are assigned to period 2000 B.C."

More important information is furnished by those sepulchral remains, which are so common to the Madras Presidency. These, which are of various shapes and putterns, furnish us with data and help us to reconstruct the history of a well-developed civilization, of which records are now lost. Thus we have specimens of cairns or mounds which contain the remains of men of a past age. Megalithic tombs too are very common in many of these southern districts. In some cases there are kistvaens, in others more commonly dolmens or cairns. These South Indian graves of the pre-historic period differ from those found elsewhere in the world.

These sepulchral monuments have been studied in detail by various scholars. Those of Coimbatore were studied by Walhouse,² those of Tinnevelly by Mr. Rea,³ while an account of the graves near Pallavaram

¹ Apart from those mentioned above, implements of pure copper have been found at 12 other sites, namely, at Rajpur in Bijnaur district, Mathura, Mainpuri, Farrukkabad and Etawa districts, at Bithur near Cawnpur and Kosen near Allahabad, and in the Hazaribagh district in Chota Nagpur. Imperial Gazetteer, II.

Walhouse, "Megalithic Monuments in Coimbatore District," J.R.A.S., 1875.

^{3 &}quot;Pre-historic Antiquities of Tinnevelly," by A. Rea, Ar. Sur. Rep., 1902-03 and 1903-04.

was given by Surgeon General Biddie who visited the spot in 1886.¹

The Coimbatore monuments which fall into two important groups, (e.g., those near Nallampatti and those near the Malabar border) consist of chambers, formed of enormous slabs, covered over with cap-stones, over which were placed heaps of black stones often rising up to 30 feet in height. The larger cairns are surrounded with circles of upright stones. Those of Tinnevelly differ slightly in their outward appearance while those of Malabar, called Topekals, form a distinct group.

All these sepulchres contain terra-cotta sarcophagi of different patterns. In some places they are oblong, in other places pyriform, while those found in Tinnevelly are elongated globular pots of thick red earthenware.² These sarcophagi bear resemblance to those found elsewhere. The oblong specimens are identical in form with those found at Gehrareh near Baghdad, showing an archaic connection of the races of these two different localities in pre-historic times.³

Apart from the sarcophagi patterns, the contents are of great importance. They seem to be the remnants of an advanced type of civilization, which

¹ See J.R.A.S., 1887, p. 693; see also J.R.A.S., 1899, "Pre-histori: Burial S tes in Southern India," by Sewell, and J.R.A.S., 1902, "The Cinder-mounds of Bellary."

² Capt. Newbold discovered a coffin shaped trough measuring $10' \times 2'$ standing on eight legs.

³ Coffin-shaped terra-cotta sarcophagi have been found in Babylon, Egypt and Italy,

flourished in pre-historic ages, and they do not betray any vestige of palaeolithic or pre-lithic cultures.

The Coimbatore finds included fine pottery, iron implements such as knives and spear blades, as also human bones. Those of Tinnevelly as examined and studied by Mr. Rea were of greater importance. They include fine pottery, iron implements and weapons, vessels and personal ornaments of bronze, lamps of iron stone-slabs, household stone implements, traces of cloth and wood, quantities of mica, swords, tridents. lances, axes, spears, arrows, daggers, mostly of iron. ornamental vase-stands, bowls, cups, grotesque images of the cock, bangles, necklaces, scent-bottles of bronze, diadems of gold bearing close resemblances to those of other places, and a ring of iron covered with gold plating (found at Vallanad). A number of urns contained husks of rice and millets. We have moreover, representations in metal of domestic and wild animals. Of these latter we have the figures of the buffalo, goat, sheep, cock, tiger, elephant and antelope.

To sum up, these remains evidently belong to a race of men who were skilful in moulding pottery, in casting and brating metals, in weaving, in working in stone and wood, with a considerable artistic skill and possessing a good agricultural knowledge. Rea thinks that their religion was perhaps devil-worship as evidenced by their various sacrificial implements similar to those used in that worship.

II

MORE NEW DISCOVERIES

More interesting finds have recently been discovered throwing some additional light on the past civilization of races inhabiting India or on their connection with other peoples of antiquity. In November, 1915, some highly-polished black and red pottery bearing peculiar marks on them were discovered in the course of excavations at Maulali and Rajgir. Mr. Yazdani, Superintendent of the Archeological Department of His Exalted Highness the Nizam, visited the Madras Museum where he found a large quantity of marked pottery bearing similar marks which he carefully studied. These marks had been noted by Mr. Bruce Foote, who took them not unreasonably for owner's marks. Mr. Yazdani published a note on his study in the Journal of the Hyderabad Archæological Society, No. 3, 1917. The most notable feature about these marks according to him was that about 75 p.c. of these marks were found to be identical with the alphabetical signs given by Evans in his comparative table showing the relation between Cretan and Ægean, Egypto-Lybian and Lybian writings. He came to the conclusion that an identity to such an extent could not be accidental and one is led to believe that the cairn-builders of South India had a distinct connection either of stock or culture with

Catalogue of Pre-historic Remains in the Madras Museum, pp. xvii and xxvv.

the Mediterranean race whom Sergi calls Eur-African. This view further gains ground from the identity and uniformity in the shape and ornamentalities of pottery, in the working of the stone, in the ritual of the dead and in the curious mode of burial in an extended position in a doubled up and crouching posture and the burying of several bodies together in a family vault. In his article on this pottery, entitled "Megalithic Remains of the Deccan: A New Feature of them, 'he further sums up by saying that "evidence is forthcoming from research in independent fields of the relation of the Ægean races to the Pre-Vedic peoples of India and it is not unlikely that the megaliths of Southern India when carefully explored, and the marked pottery systematically studied, may confirm that relation and help us in the determination of the alphabet which was common to the races and ultimately in the decipherment of the inscriptions which are now sealed records."1

So much for an account of the races, of whom nothing but an unmistakable evidence of their existence in the remote past, has come down to us. Everything else is forgotten; and even tradition is silent. Their relics are but dumb witnesses of their old culture. They remain sealed records to us and will remain so until and unless the genius of man deciphers them and unfolds to us the history of a race who had attained so high a cultural development.

¹ For a summary of Schrader's views, see his "Pre-historic Antiquities of the Aryan People," IV, Ch. XIV; also Taylor, "Origin of the Aryans," pp. 50-53.

III

THE ARYANS

Next to these, and probably last in the series of migrations in antiquity came the race, whom tradition regards as the forefathers of the high-caste Hindus of the present day. We would designate this race by the name Aryan, since this was the term they used in describing themselves, as opposed to the aborigines of the country. A systematic historical record of this race is wanting. For we have no account as to the date of its settlement in India during the earliest period; nor have we any systematic records depicting its civilization. We have only the religious literature of the people.

From the early part of the last century, the history of this race attracted the attention of the scholars of the West and evoked in them the greatest possible interest in the subject. The greatest of European scholars devoted years to the study of the culture of the race, as its language, religion, and mythology were akin to those of their forefathers, and its philosophy and literature far outshone their own. Oriental studies had by that time been fairly progressing among the Europeans, who had established a direct contact with the lands of East, and established their dominions in various parts of Asia. Comparative philology and comparative mythology had as the result of those studies developed into sciences, while anthropology was gradually progressing to the status of a science.

The conscious European mind, with the help of these sciences, discovered an affinity in race and language, with the Aryans of India, and gradually evolved the theory of the past existence of a race, from which they along with the Indian Aryans and the Iranians, claimed a common descent. The theory received general acceptance and the best brains of Europe were engaged in trying to find out the original home of the Central Aryan stock.

The question of the original home of this people has been debated upon for the past hundred years. This subject is a complicated one and, owing to lack of evidence with regard to chronology, has given rise to the widest possible divergence of opinion among philologists, antiquarians and anthropologists. Affinity in language, mythology or religion, resemblances of racial types, supposed or real, have all been exploited

to form bases for theories as to the original home original location of the Vedic Aryans, along with their supposed kinsmen, the ancestors of the European nations. At one time Central Asia was supposed to be the original home of the Aryan stock and this opinion was favoured by a large number of scholars. First propounded by J. G. Rhode (in 1820), the theory of Central Asian home received countenance from Pott, Lassen and Grimm, and received strong support from Max Müller in 1859.

Divergences of opinion, however, soon arose and Adolph Pictet, in his "Origines Indo-Européennes," tried to place them in the region of the Caspian. He was followed by Justi, the author of the "Primeval Indo-Germanic Period," and he in his turn was also strongly supported by Schleicher. Later on, some tried to prove Southern Russia as the original home, in view of the supposed analogy between Sanskrit and Lithuanian. Other scholars, pre-eminently Latham (1854), came to the conclusion that the original home should be looked for in Europe, and he was supported by Fick, Benfey and Geiger. Pietrement placed it in Siberia, while Cuno attempted to locate it in the North European plain (1871).

The controversy is not ended yet, and "it still divides scholars into hostile camps, holding diverse views as to the original home of the Aryans," one holding the Asiatic hypothesis, while the other party preferring an original home somewhere in Europe. From the point of view of philological investigations, the view of Dr. Schrader appears to be free from any party bias. In his work on the Indo-European races, he has submitted several points for consideration. These, along with the solution they call for, may be summarised as follows:

The evidence of linguistic palæontology is far from decisive. The primitive Aryan race was pastoral and semi-nomadic and consequently extended over a vast area. The grade of civilization agreed clearly with that disclosed by the oldest lake dwellings of Switzerland and consequently it seemed to have existed in Europe at an early epoch. The philological evidence thus does not enable us to draw any sharp line of division between

the Asiatic and European branches of the Aryan people. A comparative study of the vocabularies and religion convinces us of the close similarity between the diverse branches. The original cradle of the race was in the cold icy regions of the north, since words for ice and snow are common to all Aryan languages.1

The above is a summary of the views of scholars who carried on their investigations mainly with the help of philological evidence. This latter was once a favourite weapon with the anthropologists. Of late, however a great change has come. Anthropologists, now-a-days, do not attach any imporance to the supposed permanence of the relation between race language. Cuno among philologists demolished the assumption that "Aryan blood was co-extensive with Aryan speech." Some of his successors attributed the origin of various languages to a process of evolution and in 1880 they were followed by Delbrück who denied the existence of any uniform primitive Aryan speech.

In the hands of the anthropologists, the controversy took a different turn. Some of the greatest among them like Broca and Topinard repeatedly raised their voices against the confidence often put in philological evidence. They have tried to prove the insignificant ethnological value of philological considerations and following them we have a large number

¹ For a summary of Schrader's views, see his "Pre-h storic Antiquities of the Aryan Peoples," IV, Ch. XIV; also Taylor, "Origin of the Aryans," pp. 50-53.

of scholars who deny altogether the existence of a primitive Aryan people. This view now-a-days is gaining ground everywhere, and eminent men like Keane have come to regard the term "Aryan" as a mere linguistic expression "entirely forced into the domain of ethnology by philologists," though some anthropologists still believe in the past existence of communities, who, living in the Hindukush and Carpathian, evolved the Aryan mother-tongue and had a certain amount of uniformity in their physical characteristics. They believe, moreover, in the absorption of this race in a hundred other races even in pre-historic times. Hence, in their opinion the use of the word "Aryan" must be regarded as a misnomer.

The Aryan question is far from being settled. For our purpose, it may not be of so much importance, as it is in the domain of Anthropology or of pre-historic culture. We may still give the name "Aryans" to the Vedic Indians since that was the term they used in designating themselves.

As to the original home of these people, something may be said here regarding the evidence of the Vedas. The hymns give us absolutely no clue as to the original home of the composers but they show a south-easterly expansion of the race from the region of the hills of the western Punjab, to the plains eastward. Moreover they betray a familiarity with the regions of the western Punjab and the region of the Kabul valley

¹ Keane and Haddon, pp. 441, 442,

as we shall see later on. All these seem to point to the fact that these regions formed the home of the Aryans during the period when some of the hymns were composed. Formerly they must have lived somewhere in the region to the north of the Hindukush along with the fore-fathers of the Iranians, with whom they had much in common, in religion, language and custom and from whom they separated after a bitter struggle, which had its origin probably in religious disputes. Apart from this, we cannot say anything about the home of the Vedic Indians in their pre-Iranian days and an investigation of that subject must be left to antiquarians and anthropologists.

TV

THE PRIMITIVE ARYANS AND THE INDO-ARYANS

The Rg-Veda is our earliest record about the Aryans, and a careful study of this book convinces us that, by the time of the composition of the hymns, the Aryans had attained the stage of culture which was far from primitive, as also "sharply separated from that of the Western peoples supposed to be related to them" (Die Literature der alten Indian, p. 1). The mass of the people had taken to settled life; agriculture was well advanced; private property in land was established, the family organisation was complete. As we shall see presently, they were acquainted with the use of gold, silver, and another metal, the nature of which will be discussed in a subsequent chapter.

We know very little about the primitive Aryans before their migration into different lands. As yet scholars are not unanimous about the state of culture attained by them at that stage. The subject of the earliest Aryan civilisation was studied by Max Müller (see his Biographies of Words, chapter on the earliest Aryan civilisation) and by others, prominent among whom is Schrader, the author of Pre-historic Antiquities of the Aryans. A comparison between the civilisation of the Indo-Aryans and the Indo-Europeans convinces us of the great advance which the former had made upon the civilisation of the primitive Aryans. The primitive Aryans knew very little of agriculture and had hardly any conception of private property in land, while their kinsmen in Vedic India had a good knowledge of both. With the primitive Arvans, the various arts were in a rude state, and they knew one metal only, while the Vedic Aryans had developed weaving, carpentry, working in metals, and probably used metallic currency.

Coming to an explanation of the cultural development of the Vedic Aryans, we may at the outset enquire, "Whence came this civilisation?" and in this connection the question arises whether it was due to the contact of the moving Aryans with the cultured Semites of Western Asia or whether it was derived from the cultured but enervated people who were The theory of Semite conquered by them in India?

The theory of Semite contact found favour with certain scholars, and as early as

1879, Dr. Hommel of Munich tried to show, in his learned work "Die Arier und Semiten," that the Aryan and Semitic nations possessed in common a number of names connected with early civilisation and that they lived in very ancient times in close proximity. The principal words which Dr. Hommel mentioned as Semitic loan-words were the names for bull, horn, lion, gold, silver and vine. Hommel's views found support from Delitzsch who claimed to have identified 100 Semite roots with corresponding Aryan roots and also from Kremer. Dr. Schrader too believed that the Akadian word Mana (akin to Hebrew Maneh and Egyptian Mn) is found in the Rg.-Veda (VIII. 78. 2). Max Müller, in his "Biographies of Words" (pp. 111-16), tried to refute these arguments, and refused even to admit "any intercourse between the Semitic inhabitants of Babylonia and the Aryans of India, in later though still pre-Vedic times, as asserted by some scholars on the slenderest evidence.' Apart from the slender philological evidence, nothing was forthcoming.

Of late, however, we have historical records proving the contact of these races in the past. The recent researches of the Assyriologists have indeed thrown some remarkable side-lights on this Aryan-Semitic contact in the region of Sumeria, about the close of the 3rd millennium B.C. Records have been discovered showing the existence of an Aryan race, the Kassites, who conquered a large part of Sumeria in 1745 B.C. and ruled there for centuries. Of these

Kassites nothing more is known except the names of some of their kings and gods. Nothing can be made out of these royal names Gandash, Kashtiliash, Ushshi, and Adumetash. But among the gods, some are distinctly Indo-Aryan. Thus the Vedic Marut figures as Maruttash, Sūrya as Suryash, Bhaga as Bugash. We may hope that a proper study of the Kassite language and phonology will enable scholars to show the real connection of these people with the Indo-Aryans. Next to the Kussites. Kassites and the we have records also of the Mitan-Mitanni. nians, another Aryan race, who had in the 16th and 17th centuries B.C. established a kingdom in Northern Syria where they ruled for a long time and established relations with the Pharaohs of Egypt and other neighbouring princes (Hall, Ancient History of the Near East, p. 201). The names of the Mitanni kings appear to have been those of an Aryan people. Some of these bear strong resemblance to those of the Vedic Aryans. Of these we may cite the names

Artatama, Subandi, (Skt. Subandhu?), Swardata (Isvardatta?) and Yasdata (Yasodatta?). These names are seemingly those of a race speaking either an Aryan or an Iranoid dialect. Next to these, the discoveries near Boghaz-kyöi are still more interesting. There has been found a treaty written in cuneiform between the Mitannian King Mattiuaza, son of Dushratta and the Hittite conqueror Shubbiluliuma. As protectors of the treaty, the gods of the two peoples were invoked, and in this list we find the names of Mitra, Varuna, Indra

and the Nāsatyas. (See Hall, p. 201, pp. 351-352; Myers, Dawn of History, p. 109). These last two discoveries go to prove at any rate the existence of intercourse in the second millenium B.C. between a section of the Aryan race and the Semites, but what connection they had with their kinsmen in India we do not at present know; and as yet the evidence is not enough to justify us in drawing the conclusion that the Aryan civilisation of India was influenced by that of the Semites of Western Asia.

Next we come to discuss the question of the influence of any pre-Aryan indigenous civilisation of India upon that of the original civilisation of the Aryan race. Supposed Dravidian There certainly was a time when it influence. was supposed by most scholars that the pre-Aryan inhabitants of India were semi-savages who succumbed to the inroads of the highly civilized invaders. Modern research which with indefatigable energy tries to pierce the veil of dark antiquity has as yet hardly taken up the study of the culture of those races who inhabited India prior to the Aryan settlements; yet as the result of the labours of some of those who have taken up the study of pre-historic culture of India. we know (as we have tried to show) something of a race who cultivated rice and millets, who knew the art of weaving, domesticated the buffalo, goat and sheep, knew the extraction and use of iron, silver and gold, wore silver and gold ornaments, were probably acquainted with the use of the metallic currency, and had most probably devised a rude system of hieroglyphic writing.

The existence of a pre-Vedic culture is also attested by some passages of the Rg-Veda speaking of the gold, silver, and cattle-wealth of the enemies of the Aryan (RV, III, 34, 9; also Baden-Powell, p. 84), their forts and strongholds, and of the dread inspired by their enmity.

This all is that we know of the contact of the Aryans with the Semite and the pre-Aryan culture of India, which might have influenced the civilisation of the Aryans; but, as yet, we are not in a position to answer the question whether the Aryans borrowed considerably from these sources. The controversy as to the influence of foreign cultures on the civilisation of the Vedic Aryans is far from being ended and some of the greatest scholars of the present day are coming forward with their own explanations as to the origin of the Indo-Aryan culture. Prominent among these may be mentioned the view put forward by Hall, the author of the "Ancient History of the Near East," who, on ethnic and other considerations, has propounded a theory that the Sumerians were a branch of the Dravidian race originally living in India. They brought their culture developed in that country and planted it in the land of Sumeria. In a footnote to page 174 of his book, he adds that "The culture of India is pre-Aryan and the Aryan Indian owed his civilisation and degeneration to the Dravidians." At present, however, we are not in a position to answer the question as to the probability or extent of these mutual borrowings. Who borrowed from whom and to what extent, is very difficult to answer. The question of Dravidian influence still remains an open one. No evidence has as yet been furnished to prove any considerable Dravidian influence upon the Vedic Indian culture. Even the earliest hymns of the Vedas describe, as we shall see later on, a highly developed society, lacking in almost all the characteristics of a primitive culture. The evidence of pre-history or of philology does not help us in substantiating the views of Hall or his followers. The evidence of the latter science shows rather a contrary influence of Aryan culture upon the civilisation of the Dravidians. Hall's theory must therefore be regarded as a piece of brilliant conjecture.

There can be no question as to the antiquity of Dravidian civilisation. Their literature may go back to the 7th or 8th cent. B.C. The history of their settlement may go to a period of greater antiquity. They may be racially identified with the cavern-builders of the South-and the megaliths may be taken to be the monuments of their ancestors. But does that go to prove that the Aryan culture was entirely borrowed from them? Contact with them might have influenced the Aryan Indian culture, but has that been proved to have been of any considerable amount? On the contrary, we find the preponderating influence of Aryan culture on Dravidian civilisation. Take their alphabetical system-it has been midified and reduced to the Aryan model, though their peculiar characters have survived. In their language, in their history, in their tradition, we find an acknowledgement of Aryan influence. Do we not find the tradition of the Sage Agastya-or as he is called. Tamir Muni-as the "earliest teacher of arts, sciences and literature to the primitive Dravidian tribes " (Caldwell's Introduction to the Grammar of Dravidian Language, p. 114)? Do not the existing traditions and the names by which the Brahmans are designated, e.g., Eigar (instructors) and Parppar (seers), show the indebtedness of the Dravidians to the Brahmanic culture? D) we not find the tradition of the Pandyas establishing themselves in the South, long before the 4th cent. BC. and regarded as an offshoot of the Lunar race of Pandyas of the North (Caldwell, pp. 110-11)? Have not the Southern languages including Tamil. inspite of their great antiquity, not only assimilated a large number of technical

So far as our present evidence goes we may take the Indian Aryan culture as being indigenous in its evolu-In the races to which the composers of the Vedic hymns belonged, we have a conglomeration of several highly gifted and intelligent peoples, placed in an environment entirely favourable to the development of man. The amount of culture which the races possessed in common with many other nations of antiquity was far from being inconsiderable. The history of its origin is lost in the darkness of antiquity. Racial expansion, contact with other peoples, and the favourable influence of the material richness of the land of their habitation, all contributed to accelerate the growth of their culture. As they spread over the whole of India, they learnt to exploit the natural resources of the country. The hostility of enemies not only brought them into contact with diverse elements, but induced, in its turn, an effort for self preservation and progress,

and culture words and roots from Sanskrit, but also many Sanskrit suffixes and idioms?

With all these evidences before us, we cannot subscribe to the views of Hall or his followers, though we think it the duty of all scholars and antiquarians to acknowledge the early civilization of the Tamil peoples. On this much-debated subject, it would be best for us to follow the views of Dr. Caldwell and other Dravidian scholars who have studied the subject thoroughly and are competent to pronounce their judgment. After proving the antiquity of Tamil literature and giving an estimate of the Pre-Aryan civilisation of the Dravidians (Caldwell's Grammar, pp. 113-14), Caldwell sums up as follows:— 'This civilisation was probably indigenous in its origin, but it seems to have been indebted, for its rapid development at so early a period, to the influence of a succession of small colonies of the Aryans, chiefly Brahmanas from Northern India, who were probably attracted to the South by the reports of the fertility of the rich alluvial plains watered by the Kaveri, the Tamraparni and other peninsular rivers.''

and stimulated the further development of the race. The cultural development of the Indian Aryans has been a slow and gradual process. We find nothing coming into view suddenly. Take the history of Indian economic life, the history of Indian social development, the growth of Indian philosophy—in everything we find stages of evolution, one succeeding the other, the whole forming a series which gives us a complete history of the development of a race. We find nothing abrupt, nothing abnormal, springing into our view, which may justify the existence of any extraneous factor, introducing sudden modifications. In the history of India, we find moreover peculiarities in institutional and cultural development, which stand out unique and have parallels nowhere in this world; and the existence of such elements scouts the idea of any extraneous moulding influence.

We proceed next to divide the economic history of India into several important periods in order that we may make a systematic and comparative study.

CHAPTER IV

DIVISION INTO PERIODS

The economic history of India extending from the earliest times to the end of the Hindu period (cir. 1200 A.D.) may be divided into the following periods:—

(1) The Vedic period. We take this period as extending from the earliest time to the tenth century B.C. For this period, our sources of information are the Vedas, the Brahmanas and some of the Sūtras attached to the Vedas, which, though composed later, preserve some old and genuine traditions relating to the Vedic period. During the greater part of this period, agriculture and cattle-rearing were the main occupations of the people. Individual ownership in land was established and villages remained for the most part self-sufficient units. The use of various metals including gold and silver came to be known. Gold and Silver currency came into existence though the introduction of metallic currency did not displace barter alto-Vedic economic life. gether. We find also the beginnings of industry and the developments of various crafts (e.g., working in metals, weaving, carpentry, etc.) and it was towards the end of this period that the earliest unions among craftsmen were formed. As we proceed onwards, trade and commercial enterprise are found to be developed, showing the growth of mutual interdependence between the various parts of the country.

(2) The second or the Pre-Kautilyan period extending from 1000 B.C. to 400 B.C., i.e., from the end of the Vedic period to the rise of the highly centralised monarchy in Magadha. This period is characterised by some of the greatest religious and social upheavals, e.g., the rise of Buddhism, Jainism, and various other religious sects opposed to the Vedic religious system. It was also during this period that there grew up an active and direct intercourse between India and some of the nations of antiquity, e.g., the Semites of Western Asia, the Phænicians, the Hebrews and the Persians. We find the growth of towns, the development of town-life, and the rise of the guilds in all spheres of national

Town life, foreign trade and guilds. activity. From the point of view of economic history it was an age of guild enterprise and marked the tran-

sition from individual enterprise to that of corporate activity, and ultimately paved the way for the rise of state control in economic organisation. The materials for a study of this period are very scanty, our sources of information being some of the Brahmanical Sūtra works (e.g., the Gṛhya, Srauta and Dharma Sūtras, and the Sūtras of Pāṇini), and the early religious literature of the Buddhists. The Arthasāstra of Kauṭilya, which describes the social and economic condition of the next period, is of great service to us inasmuch as from the picture given in it of social and economic life, we can get certain data about the condition of the preceding period.

(3) The third or the Imperial Maurya-Kautilyan period, which extends from 400 B.C. to the disruption

of the Empire and the Imperial system, ending with the overthrow of the Sunga-Kāṇvas in the first century B.C. We have a good picture of the social and economic condition of this period in the Arthaśāstra of Kauṭilya as well as in the edicts of Aśoka corroborated by the evidence of the Greek travellers who visited India during the reign of Candragupta and his successors. The evidence of portions of the Great Epic which belong to this poriod is also interesting.

From the Arthasastra, we know that the Maurya State had a definite economic policy, and it—

- (a) aimed not only at administrative centralisation but the definite establishment of state control on national economic activity;
- (b) attempted to nationalise certain industries and tried to enrich itself by establishing monopolies in various articles;
- (c) regulated the working of guilds and crafts; controlled the price of articles, the profits of merchants and the wages of artisans;
- (d) gave great encouragement to agriculture by granting loans and advances of money and corn to cultivators, and bestowing privileges and exemptions on them. It encouraged Indian manufacturers and traders by finding out new markets for Indian goods, by encouraging foreign traders to live

encouraging foreign traders to live and settle in India, and by establishing state factories under the supervision of royal

- officials which served perhaps as models to the public;
- (e) established control over the currency by appointing officers to superintend the manufacture of gold and silver coins.

It was during this period that a direct intercourse with the Graeco-Roman world and with China was established.

(4) (a) The fourth period again may be further subdivided into two periods, viz., one extending from the beginning of the Christian era to the middle of the seventh century A.D. which witnessed the establishment of the Saracens in the Near East putting an end to the Indo-Graeco-Roman trade, and the other from that age to the end of the Hind u period. During the first part of this period, the Indians came into contact with many foreign nations, e.g., the Parthians, the Indo-Greeks, the Sakas, the Kusanas, who came as conquerors, and subsequently settled down in this country, thus adding new elements to the Indian population and probably many new principles in economic life. The importance of this period lies in the fact that it saw the great commercial and maritime activity of Hindu. traders of Northern and Southern India, who in their own vessels sailed up to the coast of Persia, Arabia, and Africa in the West, and in the East to the Islands of the Indian Archipelago and China. Moreover, merchants from Northern India carried on an overland caravan trade with the nations of Central and Western

Asia. All this, together with the industrial development, led to the growth of market towns, and stimulated the further growth of the guilds and their banking activity. They developed into ruling organisations and into municipal bodies. The law of joint-stock organisation was developed. The activity of adventurous Indian traders and princes led to the extension of Indian conquests in Further India and to the establishment of Indian colonies in the Islands of Sumatra, Java, Bali, and Borneo, and of settlements on the coast of Africa. At home, we find continued industrial development as proved by the importance of manufactured Indian articles in the Western market, and the prosperity of the merchants and of the guilds. Another important characteristic was the great improvement of Indian coinage after the model of the Greeks and Romans.

(b) From the seventh century to the end of the twelfth, there comes a period in which there is hardly any continuity of development. The evils of war and anarchy at home were supplemented by foreign competition abroad, and gradually the Indian trader lost ground. This period thus saw that gradual decay which culminated in the loss of independence. Indian economic activity dwindled down, maritime trade passed into other hands, and a bitter struggle for existence began.

With regard to these periods, something more ought to be said in passing. First of all, we cannot venture to have clear-cut demarcations either by means of historical landmarks or important events. The periods are

more or less overlapping as far as some of the main economic phenomena are concerned. Secondly, the scantiness of material at our disposal often stands in the way of our realising, to the fullest extent, the importance and nature of the economic phenomena, together with their causes and effects.

BOOK II

THE VEDIC PERIOD

BOOK II

CHAPTER I

1

ARYAN SETTLEMENT AND ADVANCE

We proceed now with the study of the economic condition of India in the Vedic period. The early Vedic period was an age of "migration and settlement." The Aryan invaders came in large numbers along with their families and moveables, divided into groups, each group under its own chief to whom the allegiance of the tribesmen was due. Of the tribes, the names of five, viz., the Anus, Purus, Druhyus, Yadus and Turvasas, are prominently mentioned in the Rg-Veda. In addition to these five, we know of some more tribes who rose into prominence later on, e.g., the Bharatas, Pancālas, Kurus, Usīnaras, Matsyas, and many others. As time went on the number of tribes and clans multiplied.

In course of time a large section of the Aryans became settled in the land while others, either hard-pressed or in search of more suitable homes, moved forward. Many sections like the Vrātyas, retained for a long time their quasi-nomadic habits and in some passages of the Brāhmaṇas we find mention of chiefs wandering with their villages. In this connection the story of Saryāta Mānava may be cited—a man who is

described in the Satapatha Br. (IV. 1. 5) as wandering with his village.

Gradual Extension of the Vedic Aryans.—By the time of the Rg-Veda the Aryans had spread over the whole of the region extending from the Kabul valley up to the Ganges and the Jumnā. In the list of rivers in the Nadī-stuti hymn, and elsewhere (R. V., X. 75; X. 53, 64) we find the names of the Gangā, the Yamunā, the Sarayū (X. 55) and the Sarasvatī, and this goes to show the limit of advance in the East. Of the western tributaries of the Indus, we find the names of the Kubhā (mod. Kabul), the Suvāstu (mod. Swat), the Krumu (mod. Kurrum) and the Gomatī (mod. Gomal) rivers. All this shows a familiarity with the valleys of the Indus and its tributaries.

At present it is difficult to determine how far south beyond the region of the junction of the various Punjab rivers with the Indus, the Aryans advanced, and it is yet a disputed point as to whether the sea was known to them. Of course the word Samudra, meaning ocean in later Sanskrit, occurs many times in the Rg-Veda but it has been taken to mean a "collection of waters" and following this argument it may mean the broad rivers of the Punjab and not the sea. This was the view of Vivien de St. Martin. Other scholars like Zimmer hive taken the word Samudra to mean in most places the lower course of the Indus which was wide. In many other places the use of the word has been taken to be metaphorical. The evidence of some passages however makes it not improbable that to the

Rg-Vedic Aryans, the word Samudra meant something more than a river; for in many places the treasures in the sea are spoken of, while in others pearls and the gains of maritime trade are referred to. Lastly, in the story of the ship-wrecked Bhujjyu, we hear of his being saved by the hundred-oared galley of the Aśvins, a vessel too big to be used in a river in those early days. This was the state of affairs during the time of the composition of the Rg-Veda. In the later Samhitās, the meaning 'ocean' is quite clear, as we shall see later on.

Though most familiar with the Punjab, the Aryans did not remain confined to it and they gradually spread over the greater part of the Ganges valley. Some sections even passed beyond the limit reached by the mass of the population. Thus the Rg-Veda mentions Kīkata which has been identified by some scholars with the country of Magadha (III. 53. 14, kim te krnvanti kīkatesu gāvah). The bulk of the later hymns of the Atharva-Veda seems to be familiar with the whole region extending from the land of the Mahā-vrsas, Vālhikas, Muja-Vantas, and Gandhāris, to the confines of Anga and Magadha in the East (A.V., V. 22, 14, Gandhāribhyo Mūjavatbhyo' angebhyo Magadhebhyah), as would appear from the 22nd hymn of Book V where fever is banded over to the habitants Later advance. of these regions. They seem to have belonged to a different race, termed contemptuously as

¹ R. V., I. 47. 6, VII. 6, 7, IX. 97. 44.

² R. V., I. 48, 3, I. 56, 2, IV. 55, 6.

³ Vedic Index, II, pp. 431-32.

Dāsas and Sūdras. By the time of the Āraṇyakas and Upaniṣads they had passed beyond the land of the Kuru-Pāncālas and advanced as far as Mithilā, which had become a great centre of Aryan culture and learning. The Aitareya Āraṇyaka has a passage which, according to some, contains a reference to Vaṅga in addition to Magadha (II 1. 1, Imaḥ prajāḥ.......Vangā-vagādhāś-cerapādāḥ arkamabhito viviśraḥ).

As regards the South, we hear of the Andhras mentioned in the Aitareya Brāhmaṇa in connection with the attempted sacrifice of Sunaḥśepha, and his subsequent adoption by Viśvāmitra (Aitareya. Br., VII. 17 and 18). The same sage is described as having cursed his fifty sons to become unclean like the Andhras and Mutivas, owing to their refusal to regard ex-Sunah-śepha Devarāta as their elder brother. In the same Brāhmaṇa (VII. 34. 9) we find the Prince Bḥīma designated as Vaidarbha, e.g., Prince of the Vidarbha country (Bhīmāya Vaidarbhāya—see Bhandarkar, Car. Lec., Series 1, Chap. I). The refer-

ence to the Andhras may not be taken to prove any fixed limit of southern extension, since at that time, the Andhras might have been in a nomadic stage, but the reference to Vidarbha, presumably a place name, may give us an idea of the limit of Aryan penetration into the South.

¹ The passage of the Aitareya Aranyaka cited above goes further than this and has been interpreted as mentioning Vanga and even Cera by Mahamahopādhyīya H. P. Sāstri.

This process of colonisation and settlement continued throughout the whole of the Vedic period, and even after that, streams of settlers continued to advance beyond the line of the farthest outposts of Aryan civilization. This eastern and southern advance beyond the borders of the Vedic homeland, continued, inspite of the terrible anathema of excommunication and loss of social position, pronounced by the law-givers of the Sūtra periol, upon those who dared to make journeys to Pundra, Vanga, Kalinga, Surāṣtra, Sindhu and other countries beyond the Aryan pale (see Bodhāyana D.S., I, I. 28. 31).

II

SOCIAL ORGANISATION

Social Organisation.—In the earlier period the tribe (Jana) was the highest political union among the Aryans and was probably an agglomeration of several settlements or Viśas and included a fairly large number of villages. The exact relation, social and economic, subsisting between the Jana and the Viś is yet to be found out. As yet it is almost impossible "to state in what exact relation the grāma in Vedic times stood to the Viś," whether it was a mere local division, or whether it was "a unit of blood relationship." The question is still further complicated by the existence of an older social division, viz., that of the Gotra, which later on became the basic principle in the formation of

See Vedic Index, entries Viś and Grāma.

exogamous groups. By the period of the composition of the Brāhmaṇas, the Jana and the Gotra became the real elements of division of the community, while the Viś practically disappeared.

Whatever might have been the original state of things the social fabric was wholly Caste in the Vedus modified by the rise of the caste system, the germs of which can be unmistakably traced in the hymns of the Rg-Veda, though we have very little of an exposition of the theory of the division of castes in that book. The only explanation of the theory of caste is found in Rg-V., X. 90, viz., the Purusasūkta, where the Rsi, Nārāyana, describes a system which seems to have already existed in his time. Beyond this we have no history, no tradition, about the origin of caste, excepting a late Brahminical tradition in the Visnu Purāna and in the Harivamsa, which ascribes the division into castes, to Saunaka, the descendant of Grtsamada, the traditional revealer of the second Mandala of the Rg-Veda.1

The majority of European scholars regard the Purusasūkta as a later interpolation. They seem to entertain the view that the Rg-Veda knew very little of caste divisions and they try to explain its rise as being due to the eastern migration of the Vedic Aryans and the consequent rise of complexities in social life. But when we proceed historically we find unmistakable evidences to the contrary, and a careful study of the

¹ Viśnu P., IV. 8. 1; Harivamśa, Ch. XXIX.

hymns convinces us that social divisions existed even during the period in which the oldest parts of the Rg-Veda were composed. Thus in some of the hymns, which are admitted to belong to the oldest portions of the Rg-Veda, we find in more than one place, the mention of a threefold or fourfold division of the community, viz., Brahma, Kṣatra, and Viś. (See R.V., VIII. 35. 16-18 and I. 113. 6.) Not to speak of this mere reference to a social division, we have separate mention of the three classes. Thus the word Brāhmana meaning a member of the priestly or the sacerdotal order occurs in more than one place (I. 164. 45; VI. 75. 10; VII. 103. 1, 7, 8; X. 16.6; X. 71.8 and 9; X. 88.19; X. 90-12; X. 97, 22; X. 109. 4; etc.). Similarly we have evidences which clearly point to the separate existence of the fighting class. Their Brāhmaņa and Kṣatriya. formation into a separate section of the community is proved by the repeated mention of the words Ksatra (R.V., I. 24. 11; 136-1-3; IV. 17. 1; V. 62.6), Ksatriya (R.V., IV. 12.3; IV. 42.1; V. 69.1; VII. 64. 2; VIII. 25. 8), Rajanya, and such other terms. The mass of the common agricultural people seem to have formed a separate division and was known by the term Viś, or, as we have it later on, the Vaiśyas. The servile classes, whether descended from degraded Aryans or from conquered enemies, formed a body to which the names Sūdra was given in the Rg-Veda.

The Vedic evidence goes further than this, and a study of hymns admittedly belonging to the older portion convinces us that even in these days, we had, instead of a casteless society, a complicated social organisation with a highly developed priesthood. And further we meet with evidences which conclusively prove not only the existence of the three above-mentioned classes, but clearly point to a tendency of subdivision even among these various groups. To take the priesthood first, even in the days of the oldest hymns of the Rg-Veda we find evidence of the development of the sacrificial art, requiring the use and presence of no less than six different priests. Thus in the Rg-Veda, I. 162 (the Aśvamedha hymn) we find mention of the Hota, Adhyaryu, Avayāj, Agnīmindha, Grāvagrābha and Samstara. Of these, two indeed go to the Iranian Period, viz., the Hota (Zd. Zota) and the Adhyaryu (Rathwi). In another old Rk we find mention of Somina Brahmana and of the Adhyaryu (see R.V., VII. 103, Brāhmanāsah Somino...Adhyaryarvah, etc.). In another place we find mention of the Gayatrinah, Arkinah and Brāhmanā, i e., the udgatr priests). All these point to an early separation in the body of the priestly class itself and the formation of separate priestly orders (see I. 10. 1.). In course of time the priestly offices multiplied and became hereditary and each family became the repository of certain formulæ or hymns and gradually the priests formed a definite caste by themselves as is proved by the evidence of the Brāhmaņas and the Upanisads.

Among the Ksatriyas, who asserted their predominance over the common people and became the ruling and fighting caste, the tribe remained the basis of division. In the case of the mass of the people originally known as the Visah, and later on identified with the Vaisyas, i.e., agriculturists and traders, they were delegated to a lower social position. They too show a tendency to subdivide. In course of time the hereditary following of occupations became the cause of the rise of sub-sections among them and these became distinguished by the importance of their occupation. The Vaisyas, though they became subordinate to the other two castes (anyasya valikṛt, anyasyādya, etc.), were even then regarded as vitally important to the community, and this would appear from the following passage of the Aitareya Brāhmana (I. 9.), "They say the gods should be provided with Vaisyas (Visas). For if the gods are provided with them men will subsequently obtain them also. If all Vaisyas are in readiness then the sacrifice is prepared." With the ever-increasing influence of the caste theory, certain gods too came to be regarded as Vaisyas and according to the Vajasanevi theory of creation, Ganeśa, the Vasus, the Rudras, the Adityas, the Viśve-devāh, and the Maruts were regarded as belonging to this caste.

So much for the early history of the caste system. Its earliest elaboration is, as we have already said, in the Puruṣa-sūkta, where apparently the composer Nārāyaṇa seems to describe a state of affairs already existing. As time went on, this theory of caste became general and was accepted on all hands and we find it obtaining a place in almost all the Saṃhitās.

It is e aborated in the Atharva-Veda, and it occurs in the Puruṣavidhān Brāhmaṇa.

Henceforth references to the four divisions are common. In the Atharva-Veda, we find reference to the four divisions of Rājanya, Vaiśya, Sudra, and Ārya (Paippaļāda, III. 5. 7). The Vājasaneyi Saṃhitā too speaks of the divisions into Brāhmaṇa, Vaiśya and Sūdra (Vāj. Saṃ., XXI. 11). In one place we find the four enumerated as Priest, Warrior, Sūdra and Ārya (XXVI. 2), though elsewhere Ārya is contrasted with Dāsa. In other places we have accounts of the creation of Ārya, Rājanya and Sūdra. Many such theories originated and we find them in the Saṃhitās and Brāhmaṇas. Thus in the Satap.

Caste and profession Br. (II. 1. 4) we find an account of the creation of the castes with the formulæ Bhuh, Bhubah and Svah. The Taitt. Br. gives a similar story of the origin of the three castes.

Side by side arose theories which aimed at the definition of the respective duties of the caste. We find, moreover, peculiar formulæ of invocation of the members of the various castes with their special duties, rights and special occupations. These we find fully elaborated in the Dharmasūtras.

Caste thus brought on a change in socio-economic life. It divided society on the basis of division of duties. As we proceed onwards its influence is more and more felt, though the castes were not as yet socially exclusive endogamous groups. Hypergamy

continued to exist and the status of the father determined that of the son. Gradually, however, the mutual exclusiveness of castes increased, and towards the close of the Hindu period mixed marriages ceased altogether. The influence of heredity on the selection of occupation however worked strongly upon the social structure and tended towards the formation of subcastes and guilds.

The principle of division of labour continued to introduce more subdivisions among the mass of the agriculturist and working population. Thus with the advancement of the knowledge of certain crafts, the men engaged in these were separated from the mass of the population. Of these crafts-people, the rathakāra, the sūta and the takṣan were the first to stand apart from the mass of the people. In the Rg-Veda (X. 97. 23) we have a reference to a class of people who are called upa-sti (adhah-sāvi—Sāvana's Con.). The meaning of this word as well of the word sti is not clear. The Atharva-Vedic evidence, however, shows that the upa-stis included the rathakara, the taksan and the sūta, in addition to the grāmanī (A. V., III. 5-6 and 7). The upa-stis have been taken to be "royal dependents" by some scholars, but Macdonell and Keith, pointing out the difficulty in finding out the real meaning, sum up by saying that "it is therefore reasonable to assume that they were the clients proper of the king, not servile, but attached in a special relation to him, as opposed to the ordinary population " (Ved. Ind., I. 96).

As we pass on to discuss the distribution of the people, we find that the village was the smallest social and political unit and the social life of those days was based on it. In order to proceed with our study we must begin with an enquiry into the nature of the Vedic village.

TTT

THE VEDIC VILLAGE OR THE GRAMA

The Vedic village was a settlement in the midst of a well-watered plain or presumably on the side of a river, affording facilities for agriculture or for cattle-rearing. Various types of village existed, each type conforming to the peculiar characteristics of the locality, though we have but little details. We have unfortunately no description of a Vedic village, but from scattered references we may form an idea as to its outward appearance and arrangements.

- (1) In general the village consisted of the central or the inhabited nucleus which contained the houses of the inhabitants and the land for cultivation (arable land). In this central portion of the village were also probably, situated, the quarters of the Grāmaṇī or the village headman, the chief's domains and the meeting-place of the village assembly.
- (2) Round the first was the belt of pasture land where the cattle of the village were allowed to graze. According to Roth the Gavya or the Gavyūti was the pasture land (see R. V., I. 25. 1°, III. 62. 16, V. 66. 3, etc.).

(3) Beyond the pasture land was the Aranya or uncultivated land beyond the village, with which the grāma is contrasted in Vedic literature. Aranya was not necessarily the forest. In some places, the Aranya is contrasted with the Amā (R. V., VI. 24. 10) and the Kṛṣi (A. V., II. 4. 5), home and plough lands respectively. It was regarded as a sort of no man's land, the home of hermits and of outlaws. Probably it was also frequented by the villagers in connection with hunting and sporting.

The outward arrangement of the Vedic village appears to have been similar to the Teutonic mark in its later stage of development during the Anglo-Saxon period or to similar village-types. But we must bear in mind that there were some essential differences between the Vedic village and the early mark as described by the historians. To take the case of the Teutonic mark, it had changed its original character with the migration and settlement of the conquering Anglo-Saxons in Britain. In the days of Tacitus, the forest and the uncultivated plains were regarded as common property. The arable land, which was under the occupation of the community, was indeed divided into plots, but these allotments changed every year, and were redistributed among the members of the community, according to the social importance or the requirements of the families. This goes to prove the absence of private ownership in the cultivated land. In the case of homesteads, however, the evidence of Tacitus goes to prove, without doubt, the existence of

private ownership. The history of the Anglo-Saxon period shows a succession of further changes. During the earlier part of that period, private ownership of the homestead remained as before, while excepting the forest and waste, the meadow and the arable land, remained subject to the system of annual allotments. With the system of rotation of crops, two sets of arable land came into existence. This system of communal ownership and periodical allotments did not, however, last long. It failed to take root or last long. Private ownership became the general rule, and land was appropriated by families and held in severalty.

The Teutonic system therefore shows the preponderating influence of a system of communal ownership. But when we come to the Vedic village, we find quite a different state of affairs. To understand the points of difference, we must in this connection classify the land of the village, and discuss the question of communal ownership of land, existing in the Vedic village.

TV

THE LAND OF THE VILLAGE.

An enquiry into the nature of the Vedic villagecommunity and the question as to whether the land of the village was owned by the community in general, has already engaged the attention of Vedic scholars. To answer this question, a careful investigation is necessary, and we must take the three kinds of land, viz., homestead land, the arable and the pasture lands, separately, and discuss the question of ownership with regard to each.

(1) THE HOMESTEAD LAND.—In regard to this we find that the earliest available Vedic evidence supports the view that houses were owned in severalty. Not to speak of scattered references to private ownership, we have in two hymns (R. V., VIII. 54 and 55) the description of a state of affairs which could not have existed without private property in houses being the accepted principle. In these two hymns the owner of each household offers prayers to "Vastospati" for immunity, security, and prosperity. Moreover, the hound of Indra (Saramā's son) is spoken of as protecting it. He barks at the thief and the robber, and his teeth gleam like the lance's point. Furthermore, in another place (R. V., X. 34. 10 and 11) an impoverished gambler is made to take shelter in another's house. The sight of others' prosperity and their fine dwelling. houses torments him. This proves conclusively that houses were owned in severalty, and that the owners had the right of sale or gift. The Atharva-Vedic evidence too confirms the same view. In all descriptions of houses, they appear to have been owned by individuals. As we proceed onward we have the evidence of the Chandogya Upanisad (VII. 24.2) where fields and houses are cited as instances of private wealth. This together with other evidences from Vedic literature goes to prove the establishment of private ownership in houses in very early times.

- (2) THE ARABLE LAND.—In connection with the ownership of arable land the following facts in the Rg-Veda are to be noted; e.g.—
 - (a) In Rg-Veda (I. 110.5) we find reference to the measurement of fields with a rod. There the Rbhus are spoken of as measuring "as a man measures fields with a staff or a rod."
 - (b) We meet with epithets like Kşetra-pati, Kşetra-sā Urvarā-pati, and Urvarā-sā, meaning owners or lords of fields (Vedic Index, I, p. 99).
 - (c) Moreover, in the Rg-Veda we find the story of Apālā, the daughter of Atri, who prayed to Indra for the fertility and increase of production in her father's field (R.V., VIII. 91.5 and 6—Imāni trīni viṣṭapā tāni Indra vi rohaya! Sirastatasyorvarāmādidam ma upodare!).

All these evidences may be taken to prove that even by the time of the oldest Rg-Veda hymns, not to speak of later times, individual ownership in the plough-land was fully established. For without private ownership we cannot expect land to be measured or fields spoken of, as objects of private possession. Schrader takes into consideration the measurement of fields already mentioned and in his opinion this points to the existence of private ownership. Baden-Powell, one of the greatest authorities on Indian land-tenure, discusses the same question and says that "there is not the least suggestion."

that the Vedic village was a group of land-holdings held in common or in any other way. But the idea of fields owned by some one, seems familiar from the allusion found to measuring the field with a staff and reed and to there being bare strips of balks (Khilya) between two fields." Two other authorities. Macdonell and Keith. in their Vedic Index (see grama) have discussed the question of ownership of land and after careful investigation, in the course of which they have cited instances. of land being measured and spoken of as belonging to individuals, they have come to the conclusion that private property in land was fully established. As regards communal ownership they express the opinion that there "is nothing to show that the community as such owned or held land." Their conclusion is decidedly in favour of individual tenure, "this in effect presumably meaning tenure by a family or an individual." The evidence of later samhitas like the Taittirīya. Sam. (see II. 2. 1) is more clear. In one passage we are told that a man who has a dispute about land with his neighbour must make offerings to Indra and Agni on eleven potsherds (Note I, Keith, Black Jajus., trans.).

(3) THE PASTURE LAND.—As to the pasture land, Vedic evidence as yet collected is too meagre to enable us to form any opinion and there must exist room for differences. Macdonell and Keith deny the existence of any trace of communal property in the sense of ownership by a community of any sort (V.I., p. 100). This indeed is beyond dispute as regards the plough-land but

at the same time there is nothing to prove private ownership in the grazing land. On the other hand, we have before us the fact that nothing is spoken about the pasture in terms which may suggest private control. The herd of the village was entrusted to a common herdsman (R.V., X. 19.3 and 4), and this goes to suggest that the pasture was enjoyed in common. The evidence of the later legal literature of the Hindus, e.g., of the Dharma-sūtras and of the Artha-śāstra, lends support to the same view (Kautilya, p. 172, 1st Ed., text). To the last day of the Hindu village system, and even up to the establishment of the English in India, the village pasture was enjoyed by the inhabitants in common, and was never subject to individual ownership. Moreover, in those days when villages were situated in the midst of the vast expanse of unoccupied land, the question of defining ownership in the pasture did not arise at all.

Such was the state of affairs. Fields belonging to individuals remained open. In the Vedic literature we find very little about permanent enclosures or hedges between fields. According to some there were bare strips of balks (Khilya) between two fields. But probably fields remained open with occasional barriers set up in times of harvest.

The establishment of individual ownership was most probably due to the Aryan migration and settlement. In Teutonic and Anglo-Saxon society we find a similar change. Thus, according to Schrader (Prehistoric Antiquities, p. 289), private property in land was

unknown among the Indo-Europeans before the migrations. Later on, with settlement in Western Europe, it became established among them. By the time of Private ownership. Tacitus, however, there arose communal cultivation and periodic allotments of land according to the dignity of the members of the community. With the establishment of the Saxons, a branch of these Teutons in England, private ownership of land was fully completed. In the case of Vedic Aryans we may infer that, in the course of migration and settlement, they passed through successive stages of development, and by the time of the Rg-Veda private property in land was fully established.

V

NATURE OF PRIVATE OWNERSHIP

We come next to discuss the nature of private ownership, viz., whether the land belonged to the head of the family, or to the members of joint families in common. As yet we have very little of precise information as to the legal relationship subsisting between the head of the family and the other members of the same. From some passages of the Atharva-Veda, we know something about the existence of joint families, members of which had an equal interest in the family property. Not only do we find a repeated mention of the words Sajāta and Samāna meaning clansmen or men of the same family, but in one hymn (A.V., III. 30), we find prayers to the

gods for unity in the family. There the expressions "let what ye drink, your share of food be common" and "united obeying one sole leader—one-minded be you all "go to prove large joint families, in which all the members had their shares in the common property.

On the other hand, we have conflicting evidence furnished by some other passages. These prove the almost autocratic authority of the father or the head of the family over the other members. According to the evidence of such passages, the father, who often exercised tyrannical authority over his children, could disinherit them, sell them to slavery or inflict any punishment he liked. As an instance of such paternal authority, Zimmer cited the story of Rjrā śva, who was blinded by his father for having destroyed the sheep and cattle of his subjects. The story of Viśvāmitra and his fifty sons who were outcasted by him and expelled, as also of the sale of Sunahsepha who was sold by his father Ajīgarta in lieu of 100 cows, all occurring in the Aitareya Brāhmana (VII, 15 and VII. 18), are examples which point to the autocratic authority of the head of the family.

Mā bhrātā bhrātaram d vikṣan mā svasāram ota svasā. Il

Samānī pūpā saha vo nnabhāgah samāne yoktre saha vo yunajmi. II

Sadhrīcīpān vaḥ śaṃmanasaskṛṇomi eka apuṣṭhīn saṃ vaṇanena sarvān. Il

Devā ivāmṛtaṃ rakṣamāṇāḥ sāyam prātaḥ saumanaso

It is, however, doubtful as to whether these are - instances which give us the real state Joint families. of affairs or were arbitrary exercises of authority. On the contrary there is evidence to prove that it was an accepted principle that, even during a father's life-time, the sons could divide property, and in that case the division was equal. This would appear from the story of Nabhanedista, son of Manu. He demanded his share, when his other brothers had divided their patrimony. His claim was accepted in principle, though many obstacles intervened in his regaining his lawful share. The story shows undoubtedly that, even during the lifetime of the father, sons were regarded as having a vested interest in property, from which they could not be excluded at will (Ait. Br., V. 14). The Taittirīya Samhitā (II. 6. 1) indeed speaks of a father making common property with a son.

Land Transfer.—In some of the Brāhmaṇas we find a decided feeling against land transfer (Sat. Br., XIII), though we have passages which point to the existence of the practice of plots of land being made over to others as gift, specially to Brahmins who officiated in sacrifices (Sat. Br., XIII, 6. 2. 18, XIII. 7. 1. 13 and 15). From another passage of the same book which deals with the Gārhapatya hearth, we know that the Kṣatriya clansmen apportioned land given to them by a (Kṣatriya) king, with the mutual consent of all (VII, 1. 1. 4). In the case of houses they could be sold or given away as we know from the story of the

gambler in the Rg-Veda who had lost everything including his dwelling-house in course of gambling. Later on, when we come to the Chāndogya Upaniṣad, we find fields and houses regarded as objects of private ownership (kṣetrāṇi and āyatanāni, VII. 24. 2), and easily transferable.

The next important point for us is to discuss the relation between the ordinary cultivator, and the king in regard to the land which the former tilled, *i.e.*, whether the ownership of the land resided ultimately in the king or whether the cultivator was a free proprietor.

VI

ROYAL RIGHTS IN LAND

King's Ownership of Land.—From the evidence at our disposal, it is very difficult to decide as to whether the king was regarded as the owner of the land. Some scholars have leaned towards the theory of royal ownership of the soil. But as a matter of fact they have hardly relied upon clear evidence, and probably they have been misguided by later. Western analogies. As yet there is nothing to prove that in the Vedic period the king was ever regarded as the owner of the state territory. The Rg-Vedic evidence shows that as guardian of his people he could claim his tribute only (Vali—see R. V., X. 173) from his subjects. Nothing more is said of his being the owner of the soil. Later on, in the Atharva-Veda we find prayers for the grant

of a share in villages to the king (A.V., IV. 22.2), and this shows that he was not regarded as the sole owner of the villages, but that the people granted him some land for the maintenance of his authority and dignity. The evidence of this hymn may be relied on, and there could have been hardly any room for this prayer if he was already the master of the soil.

The truth seems to be that, during that remote period when there was plenty of land for settlement and cultivation, the man who first cleared it and tilled it had every right to be regarded as its owner, and there was hardly any scope for the elaboration of fine legal theories.

Another important topic to be discussed in connection with the land is, as to whether a landed aristocracy, i.e., men who stood as intermediatories between the King and the common cultivator, existed. As regards this we have nothing in the Rg-Veda which proves the existence of such an aristocracy. But when we come to the later Samhitas, we have some distinct evidences, which throw light upon it. Thus in the Taittirīya Samhitā we repeatedly meet with the words Grāmakāma and Grāmin (II. 1. 3. 2), i.e., one desiring the ownership of a village, in connection with special sacrifices for the attainment of specific desires (see Taitt. Sam., II. 2. 8. 1 and 11. 1). The significance of these two passages is that they suggest that men could attain the lordship of villages either through royal favour or through the acceptance of the villagers. In

rights the king bestowed on this overlord of the village. The point does not seem to be quite clear. The authors of the Index believe that what the king granted was his regalia or sovereign right of levying contribution and probably nothing more. In the other case the man attained nothing more than a social pre-eminence, inasmuch as we know from the passages in which the word occurs that it required the sanction of sajātas and samānas, and this shows that no real rights were parted

ownership of or him. When we come to later villages.

iterature we find instances of gifts of

iterature, we find instances of gifts of villages by kings. The Chāndogya Up. contains the gift of a village by King Jānaśruti to Raikka (Chh. Up., IV. 2. 4). In subsequent periods such gifts of villages were common and this contributed to the growth of the Mahāśālas whom we find in the Upaniṣads and in early Buddhist literature. The evidence of the Buddhist literature shows—as we shall see later on—that the Mahāśālas enjoyed the revenue of villages, and may be regarded as occupying the position of landlords.

As to the king's revenue, we find the earliest reference to it in the Atharva-Veda (IV. 22. 2) where Indra is invoked to give him "share in villages, kine and horses, and to leave his enemy without a portion" (Emam bhaja grame asvesu gosu nistham bhaja yo amitro asya—A. V., IV. 4. 22. 2). Perhaps in those days the royal revenue was raised from voluntary contributions. As to any fixed share of the produce

being paid to the king as tribute, the evidence of a passage of the Atharva-Veda (III. 29. 1) is significant.

In that hymn, in which immunity from taxation in the other world is prayed for, we hear of the kings sitting by the side of Yama (Yad rājāno bibhajanta iṣṭāpūrttasya ṣoḍaśaṃ yamasyāmī sabhāsadaḥ—A. V., III. 29. I) and dividing among them the sixteenth part of hopes fulfilled in this world. This may point to the royal share being assessed to a sixteenth part of the produce in those days.

VII

IDEA OF VILLAGE CORPORATION

Most of the villages were founded by settlers under some leader. No more details are definitely known of the Vedic village, except that there was some place of common gathering where the people assembled for dice play, amusement or for transacting business. In times of war the people of the village assembled under their leaders and fought for the safety of their hearth and home. This is proved by the word Sangrāma, occurring in the Vedic literature. The word primarily meant an assembly of the village folk but later on it came to mean a war gathering, and this sense has survived in classical Sanskrit.

IDEA OF VILLAGE CORPORATION.—All these facts cited above go to prove the rise and growth of an idea of village corporation. For though private ownership

was established in the homestead and the arable land, the pasture, and beyond that, the Aranya remained subject to a sort of communal ownership. Again (even if we exclude the discussion of the question of consanguinity) the village folk regarded themselves as a united body, as opposed to outsiders, and this is proved by the tendency against land-transfers, the operation of which existed even to the days of the Artha-śāstra, where we find the existence of a right of pre-emption residing in a co-villager in the matter of sale of a house or a plot of land in the village.

This was the state of things in the Vedic village. The name village-community may be applied to it, if that may be taken to mean a body of cultivators located in one particular area "bound together by certain customs, and with certain interests in common, possessing within the village the means of local government and of satisfying the wants of life without much reference to neighbouring villages" (see Baden-Powell, n. 9).

The administrative machinery of the village goes to support the above corporate character. At the head of the village was the Grāmaṇī who was most probably an elected official. In the Grāmyavādin, who was a village judge, we find another instance of the corporate character of the village. (See Taitt. Sam., II. 3. 1. 3, Kāt. Sam., XI. 4, Maitrā. Sam., II. 2. 1). The village officials transacted the affairs of the village. They had judicial and magisterial powers and these subsisted up to the last days of Hindu independence.

Villages thus became the basis of social life and gradually, as the Aryan settlement advanced, they became more and more numerous. They were situated all over the country in the midst of the fertile plains. But a large part of the country still remained forest. The Aitareya and Satapatha Brāhmaṇas mention Dīrghāraṇyas (Ait. Br., III. 44, VI. 23, Sat. Br., XIII. 3. 7. 10), but these were gradully cleared. According to the Aitareya Br. villages became numerous in the west, while there were forests in the east (III. 44). The Jaiminīya Upaniṣad Brāhmaṇa mentions Mahāgrāmas, but gives us no details.

VIII

GROWTH OF TOWNS

Villages were connected by roads which were generally insecure and infested with robbers and outlaws. We have no details showing the great roads which connected villages of distant localities though only the word Mahāpatha occurs in later Vedic literature. Most of the villages were probably open though we hear of pur or forts mentioned in the Vedic literature.

Most probably these forts we built inside villages, and were made of stone and offered security to the people in case of ravages by enemies. We have occasional references to forts of iron or those having hundred walls but we cannot form an exact idea as to their construction, nature and size.

Towns.—Towns most probably did not exist in the early Vedic period. Pischel and Geldner thought that there were towns with wooden walls and ditches. Kaegi thinks that there were no towns in the Rg-Vedic period. We have no names of Vedic towns though the word Nagara meaning towns occurs later on. One passage of the Sukla Yajurveda seems to make some doubtful reference to a town named Kāmpila (Kāmpilya, according to the Indian commentator; see Vāj. Sam., XXXIII. 18).

But when we come to the Brāhmaṇa literature, we find the word Nagara frequently used as well as the epithet Nagarin. The Taittirīya Brāhmaṇa describes Jānaśruteya as a Nagarin. In the same literature we have epithets derived from place names, which later on became big towns. For instance, we have the epithets Kauśāmbeya, Kauśalya, Vaidarbha, and all these may be taken to mean the gradual growth of big centres of trade and culture which later on grew into towns.

CHAPTER II

1

DEVELOPMENT OF AGRICULTURE

Agriculture was the principal occupation in the villages. Its adoption took place undoubtedly at a very early age, though we have nothing, which can tell us as to the period when it was adopted. Historical evidence goes to prove that among pastoral peoples or even semi-savages, agriculture in some form or other has been practised. In regard to the Indo-Europeans, Dr. Schrader who tried to estimate their agricultural development with the aid of Philology, came to the conclusion that these peoples had a considerable amount of agricultural knowledge; not only did they cultivate millets, oats, flax, and beans but had devised a rude wooden plough. Coming to the Indo-Iranian period when the Vedic Aryans are supposed to have lived along with the Iranians, we find that the Indo-Iranian agriculture was considerably developed and this is proved by a careful comparison of a number of Vedic and Avesta words relating to agriculture. The evidence of the Vendidad shows indeed the importance of sheep and cattle-rearing among the old Persians as would appear from the repeated references to flocks and herds, but we have direct reference to agriculture also (Vendidad, Fas. III. 23 and 24; also Vendidad, XIV.

10). Of the two passages cited the first speaks in terms of praise of those "who cultivate most corn-grass and fruit," while the other speaks of the "gift of a plough with share, and yoke and oxen, whip, a mortar of stone, and a hand-mill for grinding corn." Zimmer held the same view and Keith and Macdonell are of the same opinion. They point out the similarity existing between Sanskrit Yavam kṛṣ and Zend Yayo karesh, and between Sk. Sasya and Zd. Hahya (Vedic Index, Kṛṣi, I, p. 181).

From the evidence of the Vedic hymns we may safely draw the conclusion that by the time even of the earliest hymns, the Aryan masses had settled down to a peaceful agricultural life though some sections like the Vrātyas retained their wandering nomadic habits for a long time (Pañca. V; Br., XVIII).

In regard to this the Rg-Vedic evidence is conclusive. Thus the words Kṛṣṭi aṇd Carṣaṇi (used in the plural) are applied to people in general (R. V., 1.52, 11; I. 100. 10; I. 160. 5; I. 189. 3; III. 49. 1; IV. 21. 2; etc.; A.V., XII. 1, 3 and 4. For Carṣaṇi see R.V., 1. 86. 5; III. 43. 2; IV. 7. 4; V. 23. 1; etc.). In other places too the words Pañca kṛṣṭayah and Carṣaṇayah are applied to denote the great tribes (see R. V., II. 2. 10; III. 53. 16 IV. 38. 10; X. 60. 4; etc.; for Carṣaṇayaḥ see V. 86.2; VII. 15.2; IX. 101. 9; etc.). The use of the root kṛṣ is found in many places and the word kṛṣi occurs in innumerable places of the Atharva-Veda and the Taitt. Saṃhitā.

That agriculture had become the chief occupation of the people is further proved by innumerable prayers for rain (R. V., VII. 101.3; X. 105, 1; X. 50. 3; IV. 57. 1), or those addressed to rivers to increase the fertility of the soil and to further the growth of grains and plants. These speak in clear terms of the needs of an agricultural population and show how much they depended on it. Some more light is thrown on this point by a passage (X. 34. 13) in which a man advises the ruined gambler, to give up gambling and to engage in agriculture which is sure to bring him wife, wealth and cattle.

Apart from scattered references to agricultural operations the Rg-Veda contains some detailed description of agricultural methods in the Krsi Rk (R. V., IV. 57). In that hymn, attributed to Vāmadeva and addressed to Ksetrapati, Sunāsīra. and Sītā, prayers are offered to these deities, so that there might be timely rain and that the fertility of the soil might be increased. We have, next, a description of the ploughing of the field by means of the plough drawn by oxen, and driven with goads. Lastly, Indra is invoked to help in ploughing and Pusan is asked to drive the plough. More information is furnished by scattered: words and passages. Thus, one passage (X. 23) speaks of the clearing of forests, two others (X. 94, X. 101. 3 and 4) speak of the sowing of seeds after ploughing.

The ripe grain was cut with the sickle (Dātra, Sṛṇī). The harvest (Yava) was collected in bundles,

and taken home in batches (X, 131.2). The bundles (Parsa) are then described as being beaten or trampled upon, on the floor of the granary or Khala (X. 48.7). The next operation, viz., the separation of the grain from the straw, was done with the help of a sieve or a winnowing fan (R.V., X. 94.13). For measuring the grain a wooden vessel Urdara was used (R.V., II. 14.11).

Kaegi sums up the whole operation by saying that "before sowing, the ground was worked with plough and harrow, mattock and hoe" (Rg-Veda, p. 13). We have, moreover, references to prove that occasionally the water of wells or of canals was used in watering fields (Vedic Index, I, 181-82).

The Rg-Veda gives us no description of the plough except that it was drawn by oxen (X. 106). According to a tradition the twin gods (the Aśvins) were the first to teach Manu the use of the plough and the cultivation of Yava (R. V., I. 117. 21). In that passage the word, Manuṣāya, according to Sāyaṇa, refers to the Great Manu (see also VIII. 22. 6).

Nothing more is known of agricultural operations from the Rg-Veda. It is only when we come to the later Samhitās that we have some more details about agricultural operations. The Atharva-Veda contains the tradition that Prthī-Vainya was the inventor of ploughing and agriculture (A.V., VIII. 10.24). In the same book, as elsewhere, we hear of the employment of a larger number of oxen to draw the plough, eg., from

six to twelve (A.V., VI. 91. 1), indicating either the practice of deeper ploughing, or the hardness of the soil. It mentions also the use of natural manure (III. 14. 3 and XIX. 31. 3). The seasons for agriculture are mentioned in the hymns of the Taittirīya Samhitā, bearing on agriculture and ploughing (see IV. 2 and VII. 2. 10). According to that book, barley "ripened in summer, being sown in winter, rice ripened in autumn being sown in the rains, while beans and sesamum ripened in winter and the cool season." The Satap. Br. mentions only the operation of ploughing, sowing, reaping, and threshing (1.6.1.3). The Taitt. Sam. further mentions that there were two harvests a year (V. I. 7. 3.—"May they cook, he says twice, therefore twice in the year the corn ripened ''). and according to the Kausitaki Br., the winter crop was ripe by the month of Caitra (XIX. 3). The mention of a double crop shows a distinct advance in . agriculture, which may be attributed Double crop. partly to the larger use of manure, and partly to the knowledge of the cultivation of a large variety of grains and plants which grew in different parts of the year. Whether this rotation of crops made the people entirely dispense with the practice of keeping fallows is a question yet to be decided. In the absence of evidence to the contrary we may presume that the custom of keeping fallows had gone out of practice. The cultivation of two varieties of rice. viz., the Asu and the Mahā-vrīhi, points to the same.

The agriculturist had to take great precautions against injury to his crops. In addition to drought and excess of rain many other hindrances to agriculture existed and the agriculturist suffered owing to varieties of these. Occasionally inundations swept away the seeds; lightning often injured crops and plants; moles. rats, various birds and insects destroyed the seeds or injured the sprouts. The Rg-Veda (R. V., X. 68.1) speaks of the driving away of birds from fields. In the Atharva-Veda we find spells for destroying the Jabhya and Tarda (A. V., VI, 50. 142, etc.) for counteracting droughts, lightning and inundations (A. V., VII. 18).

H

CULTIVATED PLANTS

As regards the cultivated grains of the earliest period, the Rg-Veda mentions only Cultivated plants. the Yava and the Dhana (Vedic Index, I, 398) or Dhanya (R. V., VI. 3-4). The meaning of the word Yava, according to some European scholars (Vedic Index, II. 187), is not quite clear. They hold that that word perhaps meant any kind of grain and not merely barley. But the latter meaning appears more probable, inasmuch as barley is one of the grains to be cultivated earliest and it suits all climates. According to Indian commentaries, Yava means barley only. The meaning of Dhana is similarly obscure. Scholars take this word to mean grain in

general, though in later literature it means rice. The question of rice cultivation in the Rg-Veda is disputed. European scholars interpret Dhana and Dhanya as meaning grain in general and not rice, which, according to them, could not have been known, since rice was originally indigenous to S.-E. India. In the Atharva-Veda Vrīhi is repeatedly mentioned (VI. 140. 2; VIII. 7. 20; IX. 6. 14), as also the word Tandula (X. 9. 26, etc). The same Veda (III. 14. 5) speaks of Sāriśākā, which Weber took to be nothing but Sali. The Taitt. Sam. (I. 8. 10. 1) as well as the other Samhitās distinguish between the dark, swift-growing Asu, and the Mahā-vrīhi. The Satapatha Br. mentions the swift-growing Plāśuka (V. 3. 3.2). Speaking generally, in the Atharva-Veda or other later Samhitas we find a gradual development of agriculture and multiplication of cultivated plants. Thus, in the Atharva-Veda we find not only barley (Yava) and rice (Vrihi) repeatedly mentioned but also sesamum (A. V.. XII. 2. 54; XVIII. 3. 6-9; XVII. 4), beans (Māşa), sugarcane (A. V., XII. 2), millets, (Syāmāka) and some other varieties of rice which came to be extensively used and became the staple food in a large locality (A. V., IV, 35; X.3; XII. 3; XII. 4; VII. 10.24; R. V., VII. 19). The innumerable harvest hymns and prayers for rain (A. V., VII. 18 and 39, etc.) and agricultural prosperity (A. V., VI. 142) show that, at the time of the Atharva-Veda, agriculture had extended and had become the most important occupation of the people. In the same Veda, in addition to prayers for

rain and good weather, we find mention of the weather-foreteller or the Saka-dLūmaḥ (A. V., VI. 128, 1-4) and a distinct mention of canal-digging.

The Yajur-Veda Samhitās and Brāhmanas give us more information on cultivated plants. Thus we find that the white Yajus mentions wheat (Godhūmāh), rice (Vrīhi), barley (Yavas) Māsa, Tila, Mudga, Khalvas, Priyangu, Anu, Syāmāka, Nīvāra and Masūra (see Vāj. Sam., XVIII. 12; XIX. 22; XXI. 29), all these words used being in the plural. The Taitt. Sam. distinguishes between black and white rice and speaks of the Asu-dhanya and the Maha-vrīhi (Taitt. Sam., II. 3. 1, 3; Taitt. Br., I. 7. 3, 4). Next we have in the Vrhadāranyaka Up. (VI. 3, 12) a mention of the ten cultivated grains (Grāmyāni), viz., rice and barley (Vrīhi-Yavas), sesamum and beans (tila-māṣās), Aņu and Priyangu (Aņupriyangavāh), wheat or maize (Godhūmāh), and lentils Masūra (Khala-kulāh).

In addition to the grains and plants enumerated above, other plants were cultivated or were valued for their medicinal or other properties. In the Vedic literature we find a division of the vegetable world into Oṣadhi, Vīrudh, and Vṛkṣa. The Oṣadhis were valued for their medicinal properties. In addition to the Soma plant, valued for its juice used in sacrifices, we hear of the great properties of Apāmārga, Kuṣṭha, Nalada, and other plants. Bhanga was known for its intoxicating property and is mentioned in the Rg-Veda and in other Saṃhitās. Saṇa, valued for its fibre, is mentioned

in the Atharva-Veda. In addition to these we find mention of the Eranda and the Sarṣapa, being cultivated in order to extract the oil from the seed, the oil of Tila being also mentioned in the Atharva-Veda. Of other plants we have the Alābu the Urvāru and the Āmalaka, the fruit of which was largely used. Of the more important trees we hear of the Aśvaṭṭha, the Khadira, the Bilva, the Nyagrodha, the Udumbara, the Aśvagandhā, the Simbala, and the Āmalaka. Fruit trees are mentioned but we have very little of details about them. Moreover, it is doubtful whether they were planted or grew wild. Of fruit trees the Kuvala, the Karkandhu, and the Badara are mentioned in the Satapatha Br. (V. 5. 5. 52). Certain plants came to be regarded as sacrificially unclean.

TTT

AGRICULTURAL IMPLEMENTS AND IRRIGATION

Of agricultural implements, we have repeated mention of the plough (Lāngala, Sīra),

Agricultural implebut we know very little about its construction and shape. All that we know of the plough is that it was large and heavy and required two, four or more oxen harnessed to it to draw it. In the Atharva-Veda and other Samhitās the number of oxen used is increased to eight or twelve, and this shows that a heavier plough was used, perhaps owing to the hardness of the soil. It was sharppointed, with a well-smoothed handle which was

known as the Tsaru. It was also known as Suna and Sīra or Sītā. The plough-share was called Phāla. In addition to the plough we have mention of other implements, e.g., the Khanitra (shovel), Dātra and Sṛnī (sickle), Titau (sieve) and Sūrpa (winnowing fan) in various places. According to Kaegi the mattock and the hoe was also used. The Urdara or grain-measuring vessel has already been mentioned (see R. V., II. 14.11).

As to irrigation something has already been said. Of course, cultivators depended upon rain, or; where rivers were close by, they watered their fields with the water of the river. Where there was scarcity of water, people had to depend on the water of wells; the Rg-Veda contains references to the water of wells being used for watering the fields and we have repeated mention of the word Avata meaning a well (see R. V., I. 85. 10; I. 116. 9; IV. 17. 16; VIII. 49. 6; X. 25. 4). The water seems to have been raised by means of a wheel (Cakra), to which buckets of wood were fastened. The evidence of another passage (R. V., VIII. 69. 12) shows that sometimes this water was poured into channels and sent to different parts of the field (Vedic Index, I, 39). Muir (Sans. Texts. V. 465-66) took the word Kulyā to mean artificial waterways which carried the water into reservoirs.

In addition to these, the same book contains at least one reference to canal-digging.

When we come to the Atharva-Veda,

we find a description of canal-digging (A. V., III. 13).

The newly-cut canal is described in figurative language as a calf to the river which is as the cow. The Kausika Sūtra (XL. 3-6) gives us the practical part of the ceremony of letting in the water. At first some gold plate is deposited on the bed, a frog with a blue and red thread round it is made to sit on the gold, and after this the frog is covered with Sevala (an aquatic plant) and water is then let in.

IV

AGRICULTURAL LABOUR

As to agricultural labour, most probably it was in the hands of the freemen householders themselves, who worked along with their sons and relatives. The early hymns show a state of affairs in which agriculture was looked upon as an honourable occupation. Wealthier people of course employed servants, or labourers recruited from the landless poor or the aborigines in connection with the various agricultural operations. As the Aryan occupation extended over the country and the people became rich, slaves came to be employed. Slaves are mentioned in the Rg-Veda and in other Samhitas, but we have no evidence to show that they were largely employed, or that slavery became the basis of Vedic husbandry. On the other hand, prayers for male children show that they were welcomed in assisting their fathers in their field operations. As yet there was no stigma attached to Brāhmaṇas engaging in agriculture, not to speak of Kṣatriyas or Vaiśyas.

Much of the subsidiary labour allied to agriculture was entrusted to the women of the house.

Gradually, however, a class of landless labourers arose, and these earned their living by working in others' fields. With the division of labour various classes of work-people came into existence, and the Rg-Veda mentions the words Dhānyakṛt and Upala-prakṣiṇī. In the Atharva-Veda we find Dāsīs or slave-girls employed in husking and other operations.

Agriculture thus had become the mainstay of the people, and consequently we have, in the religious literature, all sorts of prayers and spells to remove hindrances to the proper growth of crops. As already mentioned, we have in the Atharva-Veda a large number of such prayers directed against the failure of crops, either owing to drought or lightning (A. V., VII. 11), excess of rain or other causes. In addition we have charms for the hastening of rains (A. V., IV. 15), for the destruction of vermin, insects (A. V., VI. 50 and 52) or locusts and for fair weather (VI: 128). Some of these hindrances occasionally caused great disaster to the population, though we have no detailed account in early Vedic literature describing these calamities. In the Chandogya Up. (I. 10. 1-3) we have the story of a famine caused by the destruction of crops by locusts. According to the account preserved in that book, owing to disaster caused to the Kuru country by the destruction of harvest by locusts (Mataci) a sage named Cākrāyana had to migrate to a neighbouring country along with his young wife and had

to live on Kulmāṣa. Famines thus often caused migrations and wanderings on the part of the distressed population. Unfortunately, we have no graphic description of a famine during the Vedic period.

V

THE AGRICULTURIST'S IDEAL

The agriculturist's ideal is described well in all the hymns for prosperity and increase, which we find in the Atharva-Veda and the other Samhitās. Almost all the hymns speak in the same strain—agricultural prosperity, bumper harvest, increase of cattle, and accumulation of wealth. It is not possible to quote all such prayers for protection and prosperity, but the harvest hymns of the Atharva-Veda throw light on the requirements of the peasantry and their simple ideas of happiness. The following harvest song of the Atharva-Veda (III. 24) speaks of the ideals of the peasantry:—

1. The plants of earth are rich in milk, and rich in milk is this my word.

So from the rich in milk I bring thousandfold

profit.

2. Him who is rich in milk I know. Abundant hath he made our corn.

The God whose name is Gatherer, him we invoke who dwelleth in his house who sacrifices not.

3. All the five regions of the heavens, all the five races of mankind,

- As after rain the stream brings drift, let them bring increase hitherward.
- 4. Open the well with hundred streams, exhaustless, with a thousand streams.
- 5. O Hundred-handed, gather up. O Thousand-handed, pour thou forth.
 - Bring hither increase of the corn prepared and yet to be prepared.
- 6. Three sheaves are the Gandharvas claim, the Lady of the house hath four.
 - We touch thee with the sheaf that is the most abundant of them all.
- 7. Adding and Gathering are thy two attendants, O Prajapati.
 - May they bring hither increase, wealth abundant, inexhaustible. (Eng. trans. by Griffith.)

VI

SHEEP AND CATTLE REARING

In the earliest period, i.e., before the period of definite settlement, cattle-breeding was one of the main occupations of the Vedic Aryans. Even after the development of agriculture, cattle remained their principal wealth. In the earliest period, forays and raids for cattle were common, and in the Rg-Veda we have ample evidence of this In the Satapatha Br, in connection with Royal coronation the cow raid is mentioned, this being a relic of older days and customs.

Throughout the whole of the Vedic literature we find innumerable prayers for the increase of cattle. There are one or two prayers addressed to Pūṣan to find out new pastures and to lead the shepherds there.

The cow was invaluable to the Vedic Aryans for its great economic value and for a long time remained even the standard of value in ancient India. Individual ownership was known very early and the Samhitās speak of branding and the use of marks to distinguish cattle belonging to various owners. Even in the earliest period we find mention of large herds owned by individuals. In the Dānastutis we find mention of gifts of large numbers of cattle by princes and rich people.

The principal domestic animals in the Vedic period including the cow were—

- (1) The cow and the buffalo
- (2) The horse and the ass (also the mulé and the donkey)
 - (3) The camel
 - (4) The sheep and goat.

Cow.—From the earliest time the cow was regarded as the most important and most valuable of the domestic animals. It was domesticated probably in the Indo-European period as is proved by the similarity of Sanskrit Go (Gaus Nom.) with Slav. Liu. Gow, and Zend Gao. In the Indo-Iranian period the cow was highly prized and was held in high veneration. The economic importance of the cow and its products was so

great that the animal was absolutely indispensable to the Vedic householder. To supply the needs of Vedic households large herds were maintained. The cow-stall was situated within the precincts of the house and the kine were taken care of by the inmates of the house.

The cow indispensable. The meaning of the words Duhitr shows that the work of milking was

at one time entrusted to the daughter of the householder. Every morning the kine were sent out to the field for grazing, and in the evening they were kept in the Gostha. While grazing they were separated from the calves and were put under the charge of the herdsman. They were generally milked thrice a day. In addition to the milk of the cow and its various preparations, the flesh was at one time used for food (Vedic Index, I, 231; also U. C. Vatavyāla's article on Beef-eating in the "Veda-Praveśikā," also Dr. R. L. Mitra's article on the Practice of Beef-eating in Ancient India in the "Indo-Aryans." From the evidence of Vedic literature, it is clear that in early times the flesh of the cow as well as that of the bull was largely eaten, and in connection with all important ceremonies and sacrifices, we find the regular slaughter of these animals enjoined. The slaying of the Mahoksa and the Mahaja was regularly prescribed for the feeding of the guests even in some of the Grhva Sūtras. the Vedas the word Goghna (the cow-eater—according to some scholars) is applied to mean a guest. In the Taitt. Br. we find the division of the limbs of the slaughtered cow among the various gods described in

detail. The cow and the bull were slain on occasions of marriage and in certain forms of Srāddhas, e.g., the Māṃsāṣṭakā. The cow was sacrificed to the manes. In the Satapatha Br. (III. I. 2. 21) and the Taitt. Br. (II. 7. 11. 1) we find Yājñavalkya and Agastya are described as taking beef.

On the other hand we find a decided tendency against cow-slaughter even in the Rg-Veda. There the words Aghnya and Aghnyā, applied to the bull and the cow, occur many times (16 and 3 times respectively). The very use of these words goes to show that the public looked upon the slaughter of these animals as injurious to society; in the Satapatha Br. we have a long discourse (Satap. Br., III. 1. 2. 3) on the non-advisability of cow-slaughter, and we find the injunction "let him not eat the flesh of the cow or the ox, for the cow and the ox doubtless support everything on earth."

The various articles of food obtained from milk are described in the Satapatha Br. (III. 3. 3). In addition to these, the fat of the cow was used for various purposes. The skin served the purpose of a mattress, and on the occasion of marriage the newly-married wife had to sit on a cow-hide along with her husband. Cowhide was used for manufacturing various articles. Thus, in the Rg-Veda we find mention of Drties (leather bags to hold fluids). It also (VI. 48. 18) refers to bags of skins in which curd and wine were kept. Some passages (VI. 49) refer to chariots covered with cowhide. The evidence of some of the later works

(Pañca V. Br. XIV. II. 26.; XVI. 13. 13) proves the use of these leather bags for holding milk, wine and other liquids.

From the earliest period the cow was used as a standard of value in purchasing articles. Thus in the Rg-Veda we hear of the buying of an image of Indra for a few cows. In the Brāhmaṇas, too, we find Soma bought with a cow one year old and immaculate.

Oxen and bullocks were used for ploughing, for drawing wagons, and for carrying loads.

For the purposes of grazing, the cattle were placed under a cow-herd who, after grazing the cattle, led them to their respective houses (R.V., X.19.3-4).

Buffalo.—Like the cow the buffalo was a useful animal. In addition to its milk, its flesh was probably eaten (see R.V., V. 29. 8; VI. 17. 11; VII. 12. 8.; VIII. 77). In one of the Vedic passages quoted above we find Indra slaying buffaloes, the flesh of the slaughtered animals being used for food.

HORSE (Aśva, Haya, Vājin, Arvant, etc.).—The horse, too, was probably domesticated in the Indo-European period, and this is proved by the similarity between Skt. Aśva and Sl. Liu. Aszva. By the time of the Rg-Veda, the horse, i.e., Aśva, had become one of the most important of domestic animals. In the Rg-Veda, it is always praised for its speed. Its importance was due most probably to its use in war, and we find horses largely used for drawing chariots and carts. They were also used for riding and in the races which formed a very important and favourite game of the

Vedic Aryans. In the Brāhmaṇas we have innumerable references to the gods engaging in horse-races to win prizes. In Vedic warfare cavalry was probably used (see R.V., II. 34. 3 V. 61). The Aśvins and the Maruts were fond of riding. In the Rg-Veda (IV. 39) the horse is described in connection with the invocation of the Dadhikrā, and it had probably a sacred character. The sacrifice of the horse was regarded as being of the highest religious merit. According to the evidence of some passages, the flesh of the horse seems to have been eaten (R.V., I. 163).

The regions about the river Sindhu and Sarasvatī were famous for horses.

In the innumerable Dānastutis we find the horse as an object of gift (R.V., VIII. 46). Horses were often given to priests as sacrificial fee, especially in connection with the worship of Sūrya.

Ass, Mule and Donkey.—In addition to the horse, the ass, the mule and the donkey were also used for drawing chariots and other purposes. As to mules their hardiness is praised and their sterility dwelt upon and explained in some of the Brāhmaṇas. Mules and donkeys were used for carrying load and drawing carriages. The story of the race won by the Aśvins with a carriage drawn by donkeys is found in the Aitareya Brāhmaṇa (see Aitareya Br., IV. 9).

CAMEL.—Camels were largely used for carrying loads. Probably these animals were of great service in the sterile regions without water near the desert. In the Rg-Veda we find mention of gifts of camels (see

R. V., VIII. 5; VIII. 46). In the Atharva-Veda we find them drawing carts (A. V., XX. 137. 2).

Sheep and Goat (Avi and Aja).—The usefulness of the sheep and the goat is repeatedly mentioned in the Rg-Veda and the later Samhitās. In the first-named book the god Pūṣan is represented as weaving woollen cloth, and is said to wear a garment made from the wool of sheep (R. V., X. 26). Large herds of sheep and goat are mentioned in many places of the Rg-Veda and the other Samhitās. The flesh of these was largely used as food, while the wool was used for clothing. In the time of the Rg-Veda the wool of Gāndhāra was highly prized.

ELEPHANT (Vāraṇa, Hastī).—Elephants are mentioned in the Rg-Veda and the Atharva-Veda, in addition to the later works. In the Rg-Veda we find mention of kings riding on elephants. The Rg-Veda also seems to refer to elephants probably used in war (R. V., VIII. 33.8).

SWINE (Sūkara).—As to the swine we have very little information. In the Satap. Br. (V. 4. 2. 19) we have the story of the origin of the boar, in which the fat of the boar is referred to. The same speaks of pig-skin shoes also.

VII

HUNTING AND FISHING

HUNTING AND FISHING.—Hunting and fishing remained the occupation of a large section of the people,

especially the aborigines. Some were hunters by profession and lived by it, and used bows or arrows, or snares.

FISHING.—Fishing became the main occupation of a section of the population who belonged to the aboriginal classes. In the Yajurveda we find the words Dasa, Kaivarta or Kevarta and Dhaivara, all denoting fishermen. In the Rg-Veda we have very little reference to fishing. Of fish the Sakula is mentioned. Crabs (Kakkata) are also mentioned.

Of fish-eating we know very little from the Vedas, although the land inhabited by the Aryans contained mighty rivers abounding in fish. This may be due to aversion to fish-eating, but there is no direct evidence pointing to it. In the later Smrti works, fish was not only prescribed as food but was offered to the manes and the guests. Of aquatic animals other than fish, the tortoise (Kūrma or Kaśyapa) is spoken of in glaring language in the Satapatha Br. (VII. 5. 1. 5), which describes it as a sacred animal from which all creation sprang up. It is doubtful whether the flesh of the tortoise used to be taken.

PEARL FISHERY.—References to Pearl-fishery exist in the Rg-Veda and Atharva-Veda, and the word Kṛśana occurs (Vedic Index, I, 181).

CHAPTER III

Ι

THE GROWTH OF ARTS AND CRAFTS

Of the arts and crafts of the Vedic period, some seem to have arisen undoubtedly before the Arvans came and settled down in the Punjab. Many nations of antiquity had made considerable advance in them, as would appear from the similarity existing between some words. of the Sanskrit language and corresponding words of various Indo-European languages, denoting the same craft, industry or occupation. Thus, the similarity existing between Sanskrit Taksan and Zend Tashan and Greek Tektan, all meaning a carpenter, proves the existence and development of the carpenter's art among the Indo-Europeans before the separation. Again, when we come to discuss the origin of weaving, we find that the Sanskrit words Tan and Tanti (string). Zend Tan. Greek Teino and Latin Tendo, all meaning stretching, are closely allied to each other. For plaiting we have the Sanskrit root Prc, akin to, Greek Pleko and Latin Plico, all similar in sound and in sense. Similarly, for weaving we have the Sanskrit root Ve, Latin Vieo and Teutonic Weban, all akin to each other in sound and in meaning.1

¹ For similar comparisons, see "Biographies of Words."

The above philological evidence is really interesting and from this comparison of words denoting carpentry, stretching and weaving, we may safely draw the conclusion that a common knowledge of some of these crafts, e.g., those of the carpenter, the boat-builder, and the weaver existed among a large number of communities who in antiquity were closely related to each other either by blood or by speech. Max Müller discussed this subject in his "Biographies of Words" and after him Schrader took up the study of the same subject. According to the latter, the primitive Indo-Europeans knew, in addition to certain crafts, the rudiments of plaiting and weaving, and this art had advanced a little.

From a study of the Rg-Veda and the other Samhitas it would appear that, by the time of Rg-Veda, society had long passed that primitive stage in which families or individuals supplied their own necessaries by their own skill and labour. Industry had come into being, and, moreover, the ruralised industry was on its way to a further development. There was a decided tendency towards division of labour and the growth of various sub-crafts. In the early Vedic period, industry does not appear to have been servile and some of the early craftsmen like the Rathakara and the Taksan enjoyed a considerable social status. They stood in close relation to the king of whom they were regarded as Sti or clients (supra, pp. 95.96). The main impetus towards the development of industry came from the ever-increasing requirements of the agricultural and

military needs of the community, settled in the midst of a hostile population. With the growth of the crafts the organisation of the craftsmen into guilds came into existence.

For a time, however, with the elevation of the princely class and of the priests, the agricultural and industrial population lost the social status they once enjoyed. The Vaisyas, the mass of the industrial population, came to be regarded as being tributary to another (Anyasya balikrt), and oppressed at will (Ait. Br., VII. 29. 3), while the Sūdras were regarded as the servants of others, whose lives could be taken with impunity. Towards the end of the Vedic however, there came a change. The Vaisya and the Sudra communities, looked down upon by the higher castes, were able to improve their position by organising into guilds, which gave them protection against oppression and helped them in making their economic condition better. At present we know very little about the guilds which existed in the Rg-Vedic period, but some of the words denoting these bodies in later literature occur, even in the Rg-Veda and prove their existence in that very early period. The question of guild-organisation will receive attention in its proper place. Of the more important industries of the Vedic period we may mention the following:-

1. Working in wood—carpentry, including boat and chariot building and making of household implements and furniture.

2. Weaving.

3. Working in metals.

4. Pottery.

5. Tanning of hides.

TT

THE VARIOUS CRAFTS

Working in Wood.—In the Rg-Veda we have mention of the carpenter, e.g., the Taksan and Tvastr (see R. V., IX. 112. 1). In addition to the ordinary carpenter who was employed in making vessels of wood and household furniture, we have the Rathakara who made Rathas (chariots) and wagons. The Rathakara enjoyed a high social position, and is mentioned in many places in the Vedic literature. His importance was due to his work, i.e., the chariot, which was important in connection with the warfare of those days. References to boats and ships presuppose the existence of boat-builders. From the Rg-Vedic days downwards, we have mention of Plavas and Navas of Naus. Later on, in the Satapatha Br. we find mention of the two rudders of a ship or Nau-manda (Sat. Br., II. 3. 3. 15).

Weaving.—The art of weaving also originated with the Indo-Europeans. Inspite of the knowledge of weaving, the hide of slain animals and the bark of trees often supplied garments to the poorer or backward sections of the Vedic community (R. V., X. 136. 2). Hermits and Brahmacārīs continued to use these till the

time of many of the later Smrti works. As a rule, however, garments made of wool or of other materials were largely used by all classes of people in the Vedic period.

The earliest references to weaving are found in the Rg-Veda. In that book, as also in the Atharva-Veda, we have repeated occurrence of that simile in which night and dawn are compared to two young women engaged in weaving (R. V., II. 36; A. V., X. 7. 42). In the fourth Mandala of the Rg-Veda we have a reference to a cloth-stealing thief (Vastramathim tāyum). In the sixth Mandala we have a distinct reference to weaving and the occurrence of the words Tantum, Otum and Vayanti (R. V., VI. 9. 2). The roots Ve and Tan, meaning weaving and stretching, occur in many places of the Vedic literature. Moreover, the Rg-Veda contains the word Vaya, meaning a weaver (X. 26. 6), and the word Tasara meaning a weaver's shuttle (X. 130. 2). In the Yajur-Veda we find the word Veman, meaning a loom (see Vaj. Sam., XIX. 83; also Maitrā. Sam. III. 11. 9; Kāt. Sam. XLIII. 3; Taitt. Br. II. 1. 4. 2). The Vajasaneyi Samhitā mentions the use of Mayūkhas or wooden pegs to stretch the web on, and the use of leaden weights (Vaj. Sam., XIX. 80). In addition to these we have a large number of words showing the extensive use of woven garments and the names of parts of the Vedic Aryan's dress. The words Vasana (R. V., I. 95. 7), Vastra (R. V., I. 26.1; I. 134.4; II. 29; III. 39. 2); Vāsas (R. V., I. 34.1; I. 115.4; I. 162, 16; VIII. 3. 24; X. 26. 6; X. 102. 2) occur

in the Samhitās. In addition to these we have the words Atka (mantle), Uṣṇṣa (turban), Nīvi, Paridhāna, Samūla, Sāmulya (woollen garments), and Peśas (embroidered garments) (R. V., II. 3, 6; IV. 36.7; VII. 34. 11; also Vāj. Sam., XIX. 82, 89, also XX. 40).

As to the material used in the weaving of cloth, wool was probably used first (Urṇā). In the Rg-Veda the god Puṣan is described as engaged in weaving woollen cloth and wearing a garment of wool. In the Rg-Vedic period the wool of Gāndhāra (R. V., I. 126. 6), of the Paruṣṇī country and of the Indus region (R. V., X. 75. 8) was highly prized. Ūrṇā Sūtra is mentioned in later Saṃhitās (Vāj. Saṃ., XIX; Maitrā Saṃ. III. 11. 9; Kāt. Saṃ., XXXVIII. 3).

LINEN.—Next to wool we meet with the use of linen garments. The word Kṣauma, meaning a linen garment, occurs in the Maitrāyaṇī Saṃhitā and in some of the Sūtras. The word Tārpya occurs in the Atharva-Veda (A. V., XVIII. 4. 31) and in other Saṃhitās (Taitt. Saṃ., II. 4. 11. 6; Satap. Br., V. 3. 5. 20; Kātyāyana Sr. Sūtra, XV. V. 7). As to the meaning of Tārpya there is a difference of opinion. According to Indian commentaries, Tārpya means linen, but according to Goldstücker, it means a silken garment. According to Max Müller, Skt. Kṣauma and Umā mean flax or linen.

SANA.—The word occurs in the Atharva Veda and in some later works. As to its use, details are lacking. The Atharva-Vedic passage simply describes it as growing in the forest (A. V., II. 45).

Cotton.—As to the use of cotton in the Vedic period, we have no information. As far as our knowledge goes, cotton has been indigenous to India, and it was extensively used in India, at least before the 7th century B.C. However, at present we have nothing to prove its use in the Vedic period. The word Kārpāsa does not occur in Vedic literature proper. Its earliest mention is found in the Āśvalāyana Srauta Sūtra which was composed not later than the 8th century B.C. From this we may conclude that the use of cotton was known towards the close of the Vedic period, when the Aryans came to occupy the cotton-growing districts.

In the early Vedic period weaving was most probably entrusted to women. This would appear from the Vedic simile cited above, in which night and dawn are compared to two women engaged in weaving. The word Sirī (R. V. X. 71. 9) probably means a female weaver (R. V., I. 92, 3; A. V., X. 7. 42. and XIV. 2. 51). The Vājasaneyī Sam. contains the word Peśaskārī, meaning a woman engaged in making embroidered garments (in the list of human victims in the Puruṣamedha;—see Vāj. Sam. XXX. 9). The Pañca V. Br. (I. 8. 9) contains the word Vayitrī, meaning a female weaver. Women were also engaged in washing and dyeing cloths, as would appear from the words Vāsaḥpalpūlī and Rajayitrī.

Tanning of hides was known in the Rg-Veda where we find mention of the Carmamna, meaning a tanner. The Rg-Veda (VI. 48) refers to bags and pots of hide or skin in which milk, curd and wine were kept. Chariots were covered with cow-hide. No further details as to the process of tanning have come down to us, but the Satapatha Br. seems to refer to the stretching of hides with pegs.

POTTERY.—The potter is mentioned in the Vedic literature, where we have the word Kulāla (Vāj. Sam., XVI. 27; Maitrā Sam., I. 8. 3; also Vāj. Sam., XXX. 7), meaning a potter. The word Mṛtpaca too occurs in the same sense.

Wine-Distilling.—Wine-distilling was an important industry in the Vedic period. Of the intoxicating drinks, we hear of the Soma, the sacred sacrificial drink obtained from the Soma plant which probably grew in the mountains, and the Surā, which was a strong drink, used in certain sacrifices. As to Surā, in Taitt. Brāhmaṇa we have (Taitt. Br., 11.6) an account of its preparation. The ingredients used were powdered rice, barley and sour milk. Kilāṭa was probably a variety of Surā (a kind of rum), while Parisrut was a drink made from flowers. The word Surākāra, meaning a wine-distiller, occurs in Vedic literature.

As to the introduction of the vine, we have no information from the Vedic literature. By the time of Pāṇini, however, Kapiśā became famous for its grapes and the wine prepared from it.¹

Knowledge of and Working in Metals

From the evidence of the Vedic literature we know that the Vedic Aryans were acquainted with the use of the following metals:—

- 1. Gold—Hiranya, Harita, Suvarna, Jātarūpa, Candra, etc.
- 2. Silver-Rajata-hiranya or Rajata.
- 3. A third metal (Iron, Copper or Bronze?)—
 Ayas or Lohāyasa.
- 4. Copper-Loha.
- 5. Iron or Steel-Ayas, Syāma, Kārṣṇāyasa.
- 6. Lead-Sisa.
- 7. Tin-Trapu.

Of these the Rg-Veda mentions gold and the metal most used at that time—Ayas. As to Ayas we do not at present know whether it was iron or copper or bronze. The Atharva-Veda mentions, in addition to gold and silver (Rajata, A. V., V. 28), Lohāyasa or Lohitāyasa, Syāma (A. V., IX. 5. 4) occurring along with Asi meaning sword. The word Ayas too occurs in the same passage)—Ayas (A. V., V. 28), Trapu (Tin, A. V., XI. 3. 17) and Sīsa (lead, A. V., XII. 2. 1). The Vājasaneyi Saṃhitā (Vāj. Saṃ., XVII. 2. 1) gives us a list of the metals then known, e.g., Hiraṇya (gold), Ayas, Syāma (iron), Loha (copper), Sīsa (lead), and Trapu (tin). The real meaning of Ayas will be discussed later.

GOLD.—Gold, according to Schrader, was known to the Indo-Iranians, as is proved by the similarity

between Sanskrit Hiranya and Zend Zaranya. It is repeatedly mentioned in the Rg-Veda, Atharva-Veda and other Samhitas, where golden ornaments, golden necklaces, armlets and ear-rings, worn by princes, wealthy men, bridegrooms, and women of high society, are spoken of. In times of marriage, ornaments of gold were given to the bride by her relatives. In connection with ceremonies and sacrifices gold was also largely used. In the Taitt. Sam. (V. 7. 13) golden discs were used, and a golden image of man was used in Aśvamedha since gold was regarded as immortality. In the Rg-Veda (V. 19.3) we find the word Niskagrīva (wearing golden necklace). According to the same book, golden ornaments was used by bridegrooms and formed part of the gift to brides by their fathers or brothers; golden armour (Piśangam and Drāpi) were used by princes. In the innumerable Dānastutis of the Rg-Veda, gifts of gold pieces, ornaments (Nişka) or lumps of gold (Hiranyapindan) are mentioned. Apart from this use of gold, gold coins came into circulation. The question of the use of gold as medium of exchange will be discussed later on.

SILVER (RAJATA).—According to the evidence of the Rg-Veda, silver was most probably not known to the Rg-Veda Aryans. In the Atharva-Veda, the word Rajata occurs, and it must be taken to mean silver. The Atharva-Veda (V. 2. 28) describes an amulet of three metals, i.e., of gold, silver (Rajata) and iron, and silver is said to grant vigour to the wearer. The word Rajata again occurs in the Atharva-Veda (XIII.

4.51). In the Taittirīya Saṃhitā we have the story of the origin of silver, and there the word Rajatahiranyam is used. According to the same story, the god Agni carried off the booty gained by the Devas from the Asuras. Pursued by the other gods, he cried and his tears were turned into silver. In the later Saṃhitās and Brāhmaṇas, we find repeated mentions of ornaments and plates of silver (Satap. Br., XII. 8. 3. 11.; Taitt. Saṃ., II. 2. 9. 7; III. 9. 6. 5). The Pañcaviṃśa Br. describes the Vrātyas as wearing silver necklaces (XVII. 1.14).

AYAS OR THE THIRD METAL. - As to the real meaning of Ayas, a metal largely used in the Rg-Vedic period, there is a difference of opinion amongst scholars. The Rg-Veda as well as all the other Samhitas are full of references to Ayas and articles made of it, but nowhere is there any clear indication to tell us whether the metal was copper, iron or brass. The evidence of some of the old texts is often misleading. Thus, in Satapatha Br. (V. 1. 2. 14) Ayas is any metal which is neither gold nor lead. In the Vaj. Sam. (XVIII. 13) Ayas is separated from Loha and Syāmam. Max Müller was once inclined to believe that Ayas meant iron, but changed this opinion later on. In a learned article in which he discussed the meaning of Ayas he summed up as follows, "All, therefore. we are justified in stating positively, is that, at the time of the Rg-Veda, besides silver and gold, a third metal was known and named Ayas, but whether this name was referred to either copper or iron or to metals in

general, there is no evidence to show." In this connection Schrader, in his "Prehistoric Antiquities," says that it probably meant neither iron nor bronze but the pure dark copper which was known to the original Indo-European peoples (compare Sanskrit Ayas, Latin Aes, Goth. Aiz, Zend Ayarih). He further points out that "It is worthy of note that a series of names of copper gradually assumes the meaning of iron." Thus Sanskrit Loha originally meant copper but later it was used to denote Iron.

Whatever be the real meaning of Ayas, it was extensively used throughout the Vedic period. As to agricultural and household implements, we find mention of various articles made of Ayas; e.g., Aya-hata (R. V., IX. 1.2; IX. 80.2), Ayasmaya (R. V., 30. 15). In connection with chariots we hear of poles of Ayas (Ayahsthūna—V. 62. 8), and in connection with warfare we find mention of warriors wearing mailed armour (R. V., VI. 27. 6) or bearing Siprā or helmet (R. V., 113.4; V. 54.11; VII. 7.25), Khrgala or body armour (R. V., I. 25. 3; II. 39. 4), Santras, Drāpis (see R. V., IV. 53), all made of this metal. The Rg-Veda (V. 53) describes armours and weapons of metals (e.g., Vṛsī, Rukma, Khādi, Rṣṭi). Arrows were tipped with metal points (Ayasagra) and the god Pusan was armed with a metal goad. The Rg-Veda also mentions razors.

¹ Max Müller, "Biographies of Words," Appendix V; "Vedic Index," I, 32; "Prehistoric Antiquities," 212.

We have distinct references to the smelting of metals and the business of the smith (see R. V., VI. 3.4; IV. 2.17; IX. 9.12). The Rg-Veda mentions the smith along with the carpenter, the physician, and other craftsmen. Other Samhitās, too, mention him. In the Atharva-Veda the smith is said to be one of the Manīṣiṇaḥ or clever workers. The smith smelted the ore and was called Dhmātṛ. Mention is also made of the bellows.

LOHA.—Loha, the red metal or copper, occurs in the Atharva-Veda as Loha and Lohita (XI. 3. 17), and also in the list of the metals in the Vaj. Sam. (XVIII. 13). The words Lohamaya and Lohayasa occur in the Satapatha Br. (V. 4. 12; XIII. 2. 2. 8). In the Taitt. Sam. it is distinguished from Syama or iron. It is called Loha from its colour. As to its meaning scholars often differ. Both explained Loha in Lohamaya as made of copper or iron, in connection with the explanation of a passage in the Satapatha Br., in which three words Hiranmaya, Lohamaya, and Ayas exist side by side. Max Müller thought of translating Loha by copper if there was but a certainty that Ayas meant (made of) iron. Schrader translated Loha by copper, and his opinion has already been cited.

Syama.—Syāma or the black metal is used in Atharva-Veda (IX. 5.4; XI. 3.7), apparently to mean iron, because the word occurs along with Asi meaning sword (see also Taitt. Sam., 7. 5.1; Kāt. Sam., XVIII. 10; Vāj. Sam., XVIII. 10). The early men-

tion of articles made of Syāma goes to prove that the Indians learnt the process of extraction of iron from the ore very early. In subsequent periods the iron and steel manufactures of India were famous throughout the world.

TRAPU.—-Trapu or tin is mentioned in Atharva-Veda (XII. 3. 18), in the Vāj. Sam. (XVIII. 13), in Taitt. Sam. (IV. 7. 5. 2), in Kathaka. Sam. (XVIII. 10) and in Maitrā Samhitā.

Sīsa.—Sīsa or lead occurs in the Atharva-Veda (XII. 2.1; I. 16.2.4) and in the list of metals in the Vāj. Saṃhitā where we also find the statement that grass and other necessaries of sacrifice were obtained in exchange of lead. It is also mentioned in the Satapatha Br. (XII. 7.1.7) and in the Chāndogya Up. (IV. 17.7).

Golden Ornaments.—Of golden ornaments we hear of the Niska or necklace made of gold pieces (R. V., II. 33. 10; VIII. 47; A. V., V. 14. 3; Chāndo. Up., IV. 21). The Kurīra (head-ornament) is mentioned in connection with the bride's ornament (R. V., X. 85. 8; A. V., VI. 138. 2), as also Kumba (head-ornament—VI. 138. 3), Karnasobhana (R. V., I. 122. 14; VIII. 78. 3), Rukma, Khādi, anklets, armlets and rings. Princes and rich people bedecked themselves with gold. Gold ornaments were worn by brides, and formed a part of the gift by their fathers or brothers. Princes, especially those who were rich, used armours of gold.

MX

160 ECONOMIC LIFE AND PROGRESS IN ANCIENT INDIA

Workers in gold and manufacturers of jewellery, e.g., the Hiranyakāra and the Manikāra, are mentioned in the list of human victims of Purusamedha in the Vājasaneyī Sam. (see Vāj. Sam., XXX. 17, and also the Taitt. Br.).

CHAPTER IV

Ι

LABOUR AND OCCUPATIONS

From the discussion of the arts and crafts we pass on to the study of the occupations of the people. As we have already said, Rg-Vedic society was hardly primitive and even the oldest portions of that book show germs of a social division, arising out of the adoption of different occupations by different sections of the community. With the advancement of culture, social life, too, became complex. The ever-increasing wants of society gave rise to different crafts. requirements of agriculture, of war and of religion gave a stimulus to these craftsmen. Sections of the community began to engage themselves in these occupations. The success of a few induced a large number to follow the same occupation. The advantages of a division of labour became apparent, and led to a further sub-division among these craftsmen. As yet in the early period there was no stigma attached to the following of these professions, and consequently a part of the Vaisya community took up the business of the smith, the carpenter, the weaver, or the chariot-builder. Some of these stood in a special relation to the Kings and Chiefs of those days and were known as the Upasti (see R. V., X. 97-23 and A. V., III. 5-6, 7).

Apart from these skilled workmen, there were the landless poor, who made service as the chief means of their livelihood. The servile classes became workmen or engaged in lower crafts like pottery or basket-making, or took to hunting or fishing. The existence of some of these occupations is proved by the evidence of the Rg-Veda which speaks of the varieties of professions in which men engage and mentions the physician, the wright, the barber, the smelter, the carpenter, the cowherd, in addition to many others.

In R. V., IX, 112 a bard describes the various professions very beautifully. Thus he says:—

The Brāhmaṇa seeks the worshipper.
The wright seeks the crackled—
The leech the maimed.
The smith with enkindled flames
Seeks him who hath stores of gold.

In the Rg-Veda, other occupations are mentioned. Thus the barber is mentioned; the merchant is spoken of in more than one place (see R.V., IX. 112). From the Atharva-Veda we have more information on this point, and the Vājasaneyī Saṃhitā gives us a list of various occupations in connection with the victims of the Puruṣamedha (see Vāj. Saṃ., XXX.) From all these we can form an idea as to the extent of division of labour at the time of their composition. The following is a list of the principal occupations:

PRIESTLY OCCUPATIONS.—First of all, there were the Priestly Class, who earned their livelihood by

officiating in sacrifices, by teaching the sacred lore, or in other ways ministering to the spiritual needs of the community. As has already been shown, various grades of priests had arisen and these included the following:—

Rtvij-Priest officiating in sacrifices.

Chandoga-Reciter of verses.

Somin, Udgītha, Gāyatrin-Priest or reciter.

The Adhvaryu—A Yajus priest.

The Brahmā—Priest.

Gaṇaka—Astrologer.

Nakṣatradarśa—Astrologer.

Bhisak-Physician. Even during the days of the Rg-Veda the practice of medicine had become a profession. The word Bhisak occurs in many places of the Rg-Veda. The healing art was highly lauded, and the Asvins, the divine physicians, were repeatedly invoked. In addition, Varuna and Rudra were also called physicians. To the physician's skill was attributed the healing of the blind and the lame; the story of the restoration of Cyavana's youth is mentioned in many places. As yet there was no stigma attached to the following of this profession, though the germs of the later dislike is found in the Yajurveda (Taitt. Sam., VI. 4. 9. 3. etc.).

AGRICULTURAL OCCUPATIONS.—Agriculture and allied operations drew a larger number of people.

Besides the high caste husbandmen, we hear of various agricultural labourers. We have the names of the following:—

Kīnasa, Kriṣīvala—Ploughman.

Gopa and Gopāla—Herdsman.

Avipāla and Ajapāla-Goatherd.

Pasupa-Herdsman.

Dhānyakrit—One employed in husking.

Upalaprakṣinī—Woman employed in making groats.

Vāpa—Sower of grains.

INDUSTRIAL OCCUPATIONS.—Of those engaged in the various arts, the following are worthy of being mentioned:—

Karmāra—Smith.

Dhmātr—Smelter.

Kulāla and Kaulāla—Potter.

Mritpaca—Potter.

Işukāra—One who makes arrows.

Dhanuskāra, Jyākāra—Bow-maker. The separation of the arrow-maker from the bow-maker shows the extent of the division of labour.

Takṣana—Carpenter, who produced all sorts of work, both rough and fine. In the Vedic age they do not seem to have been members of a lower caste.

Prakaritr-Stone-carver.

Peśitr-Carver.

Vidalakārī—Basket-maker.

Manikāra, Hiranyakāra—Worker in gold and jewellery. The existence of these skilled workmen shows the wealth of the society.

Rajayitr—Dyer.

Vāya—Weaver.

Vayitrī—A female weaver.

Peśaskārī—A female embroiderer. The fine embroidered cloths produced by them was used by the rich, who are described as wearing mantles adorned with gold (R.V., V. 55.6). The weaving industry was then mostly in the hands of women.

Rathakāra—Chariot-builder. The importance of these craftsmen was due to the use of the chariot in war. They are mentioned in the Rg-Veda. By the time of the Atharva and Yajur Vedas they formed a separate caste and stood in special relation to the King and occupied a considerable social position.

Rajjukāra—Rope-maker.

Surākāra—Wine-distillers, who seem to have formed a separate caste in a society which used various kinds of intoxicating liquors, inspite of the fact that drinking was looked down upon as an evil (A.V., VI. 70. 1).

Non-Industrial and Menial Occupations.—In addition to the above we find mention of the barber (Nāpita, Vaptr), washerman (Malaga, Vāsaḥpalpūlī),

gatherer of wood (Dārvāhāra), fisherman (Dāsa, Dhīvara, Dhaivara, Vainda, Mainala, Kaivarta, Kevarta), herdsman (Gopa, Gopāla), huntsman (Govikartana), drum-beater (Dundubhyaghata), cook (Paktr, Srapayitr), charioteer (Sarathi, Rathin, Rathagrtsa, Dhūrsad, Yantr), elephant-keeper (Hastipa), servant (Anuksattr, Ksattr), doorkeeper (Dvarapa, Grhapa), guard or servant (Pāyu, Purusa, Presya, Pratyenas), menial or messenger (Pālāgala), waiter, (Parivestr), waiter (Paricara), rower (Anithin), boatman (Nāvāja), groom (Aśvapa), bath-attendant (Upaşektr), shampooer (Upamanthitr),

In addition to these, there were others who earned their living by amusing the public or ministering to the luxury of the rich. The Purusamedha list mentions actors (Sailusa), dressmaker (Peśaskārī), exciters of love (Smarakāri), lute player etc. (Vīnāvāda Tūnabadhma, Sankhadhma). Similarly, we hear of Vāmsanartaka (acrobat), Vināgathin (lute-player), Talaba, Pānighna (hand-clapper), Sabhāvin (keeper of gambling houses). The evidence of the Rg-Veda and other Samhitas proves the existence of courtesans (R.V., X. 27.12).

We know further that, with the growth of the state, there arose a class who lived by accepting service under the King. Prominent amongst these officials we have the Ugra (police officers), Jivagrbh (police officer), Satapati, and, later on, the Amatyas and Sacivas (included in the list of the Ratnin).

The evidence of certain words shows the existence of merchants and bankers. The words Vanij and Vāṇija occur even in the Rg-Veda. The words Śreṣthī a rich man or a banker, and Kusidin (a usurer) occur in the Aitareya and other Brāhmaṇas.

II

LABOUR

Labour.—A study of the economic condition of the Vedic period shows that as yet labour was not wholly servile; much of the agricultural labour was in the hands of the freemen householders along with their sons and kinsmen. Gradually, however, there arose various labouring classes recruited from the landless poor or conquered enemies. Slaves existed, and in the Samhitās we have repeated mention of slaves (Dāsa). In the Rg-Veda we have prayers for the acquisition of slaves, and we hear of gifts of slaves (R.V., III. 46.32; VIII. 56.3). We do not, however, know the extent to which slave labour was employed nor anything as regards their status and condition.

Female Labour.—Husking, winnowing, grinding of grains, etc., were mostly entrusted to women. Women were employed in certain industries and female labourers working for wages probably existed. Thus, in Vedic literature we meet with the words Upalaprak-sinī (woman employed in grinding corn), Vayitri, Peśaskārī (female weaver), Rajayitrī and Vāsaḥpalpūlī (woman employed in dyeing and washing cloths). In rich families Dāsis (slave girls or maid-servants) were employed.

III

EXISTENCE OF GUILDS

We come next to discuss the existence of guilds in the Vedic period. In the Rg-Veda (V. 53.11) the army of the Maruts is said to be divided into Ganas and Vrātas, the two words always meaning guilds or corporate-unions in later Sanskrit. Again, in the same book (X. 34), in connection with dice-play, we hear of leaders of Ganas and Vrātas. In the Yajur-Veda (Vāj. Sam., XXIII. 19.1) we have the word Gana, besides Ganapati which means the head of a Gana. The evidence of these words, which are not clearly and intelligently explained by the Indian commentators, goes to prove the existence of these organisations in the early part of the Vedic period. Coming to the Brhadāranyaka Up. we find the gods of the Vniśya class described as divided into Gaņas (Etāni devājātāni ganasah ākhyāyante—ganasah-ganam-ganam-ganaprāvā hi Viśah). In addition we have the word śresthi. meaning a man of consequence or, more probably, the headman of a guild, occurring in the Brāhmanas, (Ait. Br., III. 30. 3.; Kaus. Br., XXVIII. 6). All these go to prove the existence of the guilds in the Vedic period. As yet information about them is very scanty, and we know nothing about their nature and organisation.

CHAPTER V

Т

TRADE AND COMMERCE

The early part of the Vedic period, or that preceding it, was an age of economic self-sufficiency, and, consequently, there was little scope for an exchange of commodities. All the rural centres were self-supporting. Every householder produced the necessaries of life—his farm produced his food-grains and other necessaries and the industry of the women of his household supplied him with his clothing, while the craftsmen attached to the village did the rest. Consequently, there was no inter-dependence between two neighbouring local areas. The surplus produce was kept for future consumption. This state of full economic independence did not, however, last long. Society became complex. A large section of the community gave up

the simple agricultural life, and the primitive arts and crafts drew away a large number; owing to these and

various other causes, there arose a scope for interchange of commodities between different local areas. Barter of goods, and, later on, regular purchase and sale, came to be introduced. The excess of production in certain localities induced energetic men to carry them to other places where these could be disposed of on profit.

In this way there arose commercial enterprise, and we find mention of merchants even in the Rg-Veda as well as the use of the verb Krī (meaning purchase; R.V., IV. 24. 10).

But beyond this, the Rg-Vedic evidence does not tell us anything. We know nothing as to the existence of markets, though one passage suggests the existence of haggling (IV. 24. 9). The same speaks of sellers, who demanded more price than that originally asked for (i.e., something more than that paid at the time of sale). The buyer, on the other hand, is represented as insisting on the original price demanded and paid for, and is made to insist on the sanctity of contracts (R.V., IV. 24.).

As to traders we have in the Rg-Veda the words Vaṇij and Vāṇija (R.V., I. 112. 11 and R.V., V. 45. 6), denoting a merchant. In the Vāj. Sam., in connection with the Puruṣamedha, the Vaṇij or merchant is mentioned as a victim (see Vāj. Sam., XXX. 17 and Taitt. Br., III. 4. 14. 1).

Excepting their existence we know nothing of the Vedic merchants. The Vedic passages where the word Vanij occurs, tell us nothing about them, *i.e.*, about the way in which they carried on business, their difficulties or the profits they made.

When, however, we come to the Atharva-Veda, we have some information about early merchants and the commodities they carried for exchange. That book (V. 7. 6) mentions garments (Dūrśa), coverlets (Pavasta), and

goatskin (Ajina) as articles of trade. As to merchants the information supplied is really interesting, for an Atharva-Vedic hymn (III. 15) shows that the early merchant was an adventurous wanderer, who, moving from place to place, risked not only his goods, but his life also, for the sake of gain. He had to travel from one part of the country to another. His life was often jeopardised owing to the depredations of wild beasts on the way, and owing to the presence of robbers who scrupled not to take the life of such people. Consequently, before starting, the merchant prayed to Indra, "the merchant par excellence" (A.V., III. 15.1), so that he might be his "guide and leader, chasing illwill, wild beasts and high-way robbers." After this prayer for security he is described as turning to Agni and praying for "a hundred treasures" and craving pardon for "this stubbornness." He is then made to speak of "the distant pathway which his feet have trodden," and to call upon the gods to be propitious to him in order that there may be success in "sale (Vikraya), barter (Prapana) and exchange of merchandise (Pratipana)" that his invested capital (Dhanam) may grow more for him and his ventures may be prosperous.

The Vedic merchant, thus, seems to have been an adventurer, in search of gain. He sold, bartered and exchanged his goods for those of another locality. He appears to have been the forerunner of the Svārthavāhas and caravan leaders of the early Buddhist literature and of the Jātakas.

The above hymn is used in the Kausika Sūtra (K.S., L. 13) for success in business.

THE PANIS.—In addition to these indigenous merchants of the Vaisya caste, we have another class of merchants designated by the word Pani in Vedic literature (see R.V., I. 33.3; X. 60.6; A. V., 11.7; Vaj. Sam., XXXV. 1). According to the evidence of Vedic literature, the Panis were a rich and enterprising merchant class solely devoted to the The Panis. cause of gain, either through trade or through usury. They have been designated Bekanāṭas or usurers, and Rg-Vedic evidence shows that, with the exception of a few of them like Brbu, they were the objects of popular dislike. According to Roth and Zimmer they were a niggardly merchant class who neither worshipped the gods nor revered the priests. Ludwig thought that they belonged to the aboriginal trading class, while according to Hillebrandt they were the Parnians of Strabo. The identification and association of the Panis with Bekanāţa (R.V., VIII. 16. 10 and Nirukta, VI. 20), a word of foreign origin (Babylonian or aboriginal?), is noted by Macdonell and Keith in their Vedic Index (I, pp. 472-73).

The growth of trade facilitated the growth of standards and measures of exchange. In course of time a metallic currency grew and displaced simple barter, or the use of the cow as a standard of value. The machinery for measuring quantities came into existence.

BALANCE, WEIGHTS AND MEASURES.—The balance or the Tulā is mentioned in the Vāj. Samhitā (XXX.

17) and also in the Satapatha Brāhmaṇa. We find it mentioned in connection with the estimation of a man's good and evil deeds, or in connection with the balance ordeal. Wooden vessels of definite size were used in measuring grains. Standards of weight were also invented. Thus the Kṛṣṇala (berry of abrus precatorius) and Māṣa and some other grains were used as standards of weight in measuring precious metals (Vedic Index, I, p. 185).

We have very little information about the interchange of commodities of various localities. But anyhow there are indications that, towards the close of the Vedic period, goods from the extreme west were sent to the east. The wool of Gāndhāra and Paruṣṇī were prized all throughout the land. Similarly, the Atharva-Veda, which describes Guggula, as a product of the Indus or "coming from the sea," points to the growth of a centre of maritime trade in the region of Sind. The Satapatha Brāhmaṇa describes (Sat. Br., XI. 5. 5. 12) horses as Saindhavās or coming from the Indus region (also Br. Ar. Up., VI. 2. 13). The Brhadāraṇyaka Upaniṣad (II. 4. 12) also describes salt as coming from the Indus.

II

MARITIME TRADE

It is difficult to answer the question as to whether the sea was known to the Vedic Aryans or whether these people had any commercial intercourse with the other maritime nations of antiquity. We are dependent more or less on literary and circumstantial evidence, and even then, the material at our disposal is very scanty. As we have said elsewhere, the word Samudra, which in later texts always means the sea, occurs in the Rg-Veda, which also contains some references to voyages to the Samudra. Thus Rg-Veda, I. 25. 7., referring to the Samudra, speaks of Varuna's knowledge of the ocean-routes (Samudriyah) along which ships sail. A second passage (I. 56. 2) refers to the Samudra in connection with the activity of merchants. Samudra is again mentioned in R.V., VII. 88. 3 and 4, which describes the voyage of Vasistha and Varuna. in which passage the word Nava also occurs. addition to this we have in the Rg-Veda (R.V., I. 116. 3 to 5) the story of Bhujyu, son of Tugra, who was sent out by his father to conquer certain enemies.

While at sea his vessels were disabled, and he with his followers were on the point of being drowned. But he prayed to the Aśvins, who heard his prayers and sent him home in a vessel of one hundred oars (Satāritram nāvam).

As to the meaning of the word Samudra occurring in the passages mentioned above, some scholars are of opinion that Samudra meant not the sea but only the "lower course of the Indus which after receiving the waters of the Punjab rivers is so wide that a boat in mid-stream is invisible from the bank" (see Macdonell, Hist. of Sans. Lit., p. 143). In their Vedic Index, Macdonell and Keith have discussed this question and

cited the opinions of various scholars, e.g., those of St. Martin, Lassen, Max Müller and Zimmer (Vedic Index, II, pp. 431-38). They have summed up by saying "that there are references to the sea (R. V, I. 47.6; VII. 6.7; IX. 97. 44; etc.), perhaps to pearls and the gains of trade (R. V., I. 48.3; V. 56.6) and the story of the ship-wrecked Bhujyu seems to allude to marine navigation." (The legend of Dīrghatamas may be added.) This view is reasonable and should be accepted by all.

As to the existence of trade-relations between India and Babylonia or any other country of the ancient world, we have no definite or positive information, but there are circumstantial evidences which throw light upon the contact of nations in antiquity and go to prove that there existed some sort of intercourse between India on the one hand, and Assyria, Babylonia and some other countries of the ancient world on the other. The similarity between some of the oldest

Vedic Myths (compare the story of Manu and the accounts of the Deluge in Vedic and Babylonian literatures)

and those of Sumeria, the recent discovery of the records of the settlement of some branches of the Aryan race in Syria and Sumeria worshipping some of the oldest gods of the Vedic Pantheon (see the accounts of the Mitanni and of the Kassites in Hall's Ancient History of the Near East, pp. 201-30), the recent discovery of some clay-seals bearing cuneiform inscriptions found in Southern India, the discovery of the

presence of Indigo in the clothes of some of the Egyptian mummies, the importation of Sonter-incense (Candana?) by the Punt (Puanit) expedition in the reign of the Egyptian Queen Hat-sep-situ, the discovery by Rassam of Indian cedar in the palace of Nebuchadnezzar, and of Indian teak in the temple of the moon-god at Ur re-founded by Nebonidus-all these point to the existence of an intercourse between India and some of the nations of antiquity. Perhaps this connection existed from pre-historic times when the sturdy navigators of ancient India, whether Aryans or Dravidians, made voyages to the West or to the Eastern Archipelago or even further beyond. Hall, in his Early History of the Near East, while discussing the question of the origin of the early Sumerians. expressed the view that these people were a branch of Dravidians of Southern India, who

Dravidians of Southern India, who migrated to that region either by land through Persia or by the sea (see Hall, pp. 173-74). We may not accept this view of Mr. Hall but the recent excavations in Mohenjo-Daro throw light on the probable Indo-Sumerian intercourse on the Indus valley and confirm this race-contact of the past. As yet the time is not come when we may form any definite opinion on the subject and we are to wait until the labours of those scholars engaged in the study of the history of the Assyrians, the Babylonians, the Elamites, the Kassites, the

¹ J. R. A. S., 1898-article by Kennedy.

MARITIME TRADE

Mitannians and the Hittites, have succeeded in placing before us some definite evidence which alone can help us in solving the problem. But this much is almost certain that maritime intercourse existed between Vedic India and the contemporary ancient world.

CHAPTER VI

Ι

EXCHANGE-ITS METHODS AND MEDIUMS

In the earliest period of the history of human culture, all exchange was by barter, i.e., the exchange of one article for another. This was the stage of simple barter. Next to it we have generally a second pre-metallic stage, in which the medium of exchange is some article commonly found and being valued for its utility, becomes the measure of value. In the history of various races, we find the existence of such standards. Thus in Homer we find the use of oxen as standards of value. Gardiner the author of the history of "Ancient Greek Coinage," illustrating this point quotes the Homeric lines "Arms worth a hundred kine for arms worth nine." In the laws of Rome, fines were assessed in oxen. The cow was the standard of value in Rome, and thus came the word Pecunia (originally meaning cattle) to mean money in which sense it is used in later Latin literature. In addition to the cattle-standard we know of the use of cubes of tea in modern Turkestan, of shells in India and China, of yards of cloth in modern Africa, as Primitive exchange.

Primitive exchange. yards of cloth in modern Africa, as standards of value. According to Walsh the author of the history of "Metallic Currency", the pastoral nations of Central Asia still use cattle for this purpose. Tacitus tells us that the Frisians

used to pay tributes to the Romans in hides of bulls (uri) and when the latter demanded bigger hides this lead to a war between the two nations (see Del Mar, Ch. I).

The use of these above-mentioned standards of value gave rise to difficulties, owing to the inconveniences caused by them. Thus in the case of the cow, variations in size or quality must give rise to difference in value. Consequently we must expect to find some more specifications as to the age, size, or milk-bearing capacity of the cow. In the Brāhmaṇas we find (Ait. Br. p. 59; Haug's Trans.) that in connection with the buying of Soma, a cow one year old and immaculate is put down as the standard price for Soma. In addition to this, there would be hardly any provision for the measurement of fractional parts, i.e., half the value of the cow or a quarter of the same. The difficulty that arose between the Romans and the Frisians has already been referred to.

To solve these difficulties and to have a more convenient and portable standard, the use of the precious metals was introduced. In the earlier stages of the use of precious metals we have bars, ingots or lumps of gold and silver, of certain standard weights used as money. These had peculiar shapes and marks in different countries. Thus according to Walsh (p. 7), in Greece the oldest coins were stamped with the figures of animals. The same was the case in Egypt, where we find figures of the cow or of other animals in gold or silver used as standards of value.

In this stage weight and fineness were always taken into consideration. After this stage we have the issue of private coinage and that came to be succeeded by the use of coins issued and regulated by the state.

From the evidence of the Vedic literature we find the existence of these three stages.

The three stages in There is not only simple barter proved by the evidence of the words—

Pratipana or Prapana, meaning commodities received in barter or exchange (A. V. III. 15 and XII. 15. 4), but the use of the cow-standard in addition to that of gold and silver money. As to the use of this cattle-standard, Macdonell and Keith cite an instance from the Rg-veda in which an image of Indra is obtained by giving ten cows. According to them, this proves the existence of simple barter. In reality, this shows the growth of an idea of a standard of value and the use of cows for this purpose. According to the Brāhmaṇas, as we have said already, Soma was purchased with a cow one year old and immaculate.

Besides the use of the cow there was the use of gold and probably of silver money. The use of metallic currency has already been mentioned and we pass on to the history of its use and gradual development.

II

USE OF GOLD AS MEDIUM OF EXCHANGE

The question of the use of gold pieces as currency (or medium of exchange) in the Vedic age, is one

which has given rise to a controversy which is far from being ended. But the topic is an important one and requires a careful consideration.

Before we enter into a discussion of the views of different scholars we summarise the evidence here:— In the Rg-veda we have repeated mention of the word Niṣka, a word which in later Sanskrit means a gold coin; the word Manā (supposed by some to be akin to the Akkadian Mina) also occurs in the same book (R. V., VIII. 78. 2). Both the words are of doubtful etymology. The exact meaning of Niṣka is hardly clear and it is used in more senses than one. Of the prominent passages which contain this word Niṣka we quote a few here:—

- 1. In R. V., I. 126. 2, a sage Kakṣīvān praises his patron Bhāvayavya of the Sindhu country, for the gift of "one hundred kine in addition to one hundred Niṣkas as a reward for his services." (Satam ragño nādhamānasya niṣkācchatam aśwān prayatān sadyādam śatam Kakṣīvān asurasya gonām divi śravo'jaramā tatāna.)
- 2. In II. 33. 10 of the Rg-veda, the god Rudra is described by Grtsamada as wearing a neck-ornament of Niskas, which are described as Viśvarūpa. (Arhannivarsi sayak ni dhanvārhan niskam yajatam viśvarūpam.)
- 3. Again in R. V., VIII. 47. 15, the goddess Usas is invoked to take away the evils of bad dreams from those who wear "Niṣkas." (Niṣkām vā dhā kṛṇavate srajam, etc.)

4. In R. V., V. 19. 3, in connection with a hymn to Agni we are told of sacrificers wearing Niṣkas, (Niṣkagrīvo bṛhaduktha.....vājayuḥ.) Here the word Niṣko-griva has been explained by Sāyana as Niṣkena Suvarņena alaṃkṛitā grīvā.

In many passages of the Atharva Veda, the word Niṣka is used. (A. V., V. 14.3; V. 17. 14.) There too in one place (XX. 131.8.) we hear of a gift of one hundred Niṣkas (Satam niṣkaṃ hiranyayā) of gold.

Later on references to the Niskas are many in the Brāhmaṇas and the Upaniṣads. It is needless to quote all these passages. Some only may be cited. Thus the Aitareya Brāhmaṇa contains a reference (VIII. 22. Niṣka-kanṭha) to a man with a Niṣka-garland. Again in the Pañcaviṃśa Brāhmaṇa, a Vritya is described as wearing a silver Niṣka. So much for the word Niṣka.

Apart from Niṣka the word Manā, appears in one passage of the Rg-veda (VIII. 78.2.) where a priest Kaṇva enumerates the gift of one hundred kine, along with some gold Manā.

Besides these Niṣka and Manā, we find mention of lumps of gold (Hiranyapiṇḍa) which are given away to priests or to other people. To quote one such passage, we find in Ḥg-veda VI. 47-23, the priest Garga—extolling the gifts of Prastoka and of Divodāsa to him. Among other things enumerated he speaks of "ten purses" and "ten lumps of gold" along with ten horses and some other articles. (Daśāśvān daśa

kośān daśa vastrādhibhojanā daśo hiranyapindān Divodāsā dasāniyam—VI. 47. 22. and 23.) Here the use of the words Kośa and of Hiranyapinda is significant. The first apparently signifies purses full of gold or silver, while the second expresses, in clear terms, the gift of ten lumps of gold.

We have thus summarised, the evidence of passages in which the words Niṣka and Manā occur, in addition to those speaking of gold purses or lumps. At first sight, the evidence seems rather scanty and rather inconclusive, but when we take into account other evidences available, we are bound to come to the conclusion that gold was plentifully used; that the Niṣkas, seem to have been generally valued as neckornaments; but in some passages they are something more—they were nothing but gold and silver-pieces of definite weight and were used as money.

That they were gold-pieces in circulation is supported by later Indian evidence but in regard to their use in the Vedic period there is a difference of opinion amongst scholars. The majority of European scholars are disposed to think that in that very early period the use of gold and silver money was not known. Some of them go so far as to deny the existence of gold and silver currency in India prior to the contact of Indians with foreign nations. Thus, Prinsep attributed the rise of coined money in India to the Greek

European opinion. contact and H. H. Wilson too once leaned to the same view (Ariana Antiqua, 404). Kennedy held the view that the

earliest Indian coins were copied from the Babylonian originals after the Hindus came into contact with these peoples in the seventh or sixth century B. C. Vincent Smith entertained practically the same view. late Professor Max Müller too, himself a Vedic scholar of repute, tried to prove the same and made the ludicrous assertion that the Vedic Niska was so called after Kaniska (not the Kuśāna Kaniska) which was the surname of some ancient pre-Vedic king. With this spirit of an a priori assertion, based not on reason or evidence, we have nothing to do. Almost all of them admit the use of the word Niska, which in later literature always meant pieces of gold of definite weight, but explain its use in the Vedic literature in the sense of nothing but ornaments of gold, e.g., gold-necklaces.

In this connection it must be admitted that the evidence of some of the passages quoted above point to the use of Niṣkas for the purpose of ornaments and in this sense they have been taken by Sāyana. (Cf. Niṣka-griva—wearing a necklace—R. V., V. 19.3.) In other places however, this meaning is hardly applicable, and if we take this sense, it will bring in absurdity. Thus in R. V., I. 126. 2, where the singer celebrates the gift of 100 Niṣkas, the meaning necklace hardly appears to be appropriate. A man cannot require a hundred necklaces to adorn himself. There the word can only mean some standard weight of gold in common use. Macdonell and Keith, who would otherwise have regarded Niṣka to be a gold ornament worn on the

neck, take the evidence of this passage into consideration and sum up in the following way—" As early as the Rg-veda, traces are seen of the use of Niska as a sort of currency. For, a singer celebrates the receipt of a hundred studs and a hundred Niskas. He could hardly require the Niskas merely for purposes of personal adornment." (Vedic Index, I. 455.)

The truth about Niska, thus appears to be, that they were pieces of gold of definite weight and were used as medium of exchange. That they were used as neck-ornaments can be easily explained as being due to the Indian tendency of making necklaces of gold and silver coins. We have innumerable examples of this in Indian literature, and even now we find such necklaces of gold coins being used among the rich. Poorer people including labourers or even scavengers often make necklaces of coins, which not only serve as ornaments but form their savings.

Thus, the view that the Niskas were gold or silver
pieces of different weight and value,
is confirmed by the evidence cited
above. The existence of a moneystandard in general acceptance may be further proved
by other evidences. Thus some passages speak of gifts
of precious metals without enumerating any standard.
These gifts of so many pieces do undoubtedly refer to
some definite standard in general acceptance, since,
without such a standard in general acceptance, we can
hardly expect the mention of mere numbers without
any further specification. To quote instances of such

gifts without specification of standard, we find the following important passages. Thus Rg-veda V., 27. 1, speaks of the gift of 10,000 pieces by king Tryaruna (Traivṛṣṇo Agne daśabhiḥ sahasraiḥ Vaisvānara Tryarunaściketa.—R. V., V. 27. 1 and 2; note the words Daśavis sahasrais and śatā), the son of Tribṛṣṇa. The second verse of the same Rg-vedic hymn speaks of another such gift of a hundred in addition to other things (To me śat ca vimśatim ca gonām, etc.).

Again, in R. V., VIII. 6. 46 and 47, the sage Vatsa, praising the munificence of king Tirindira speaks of his bestowing of a hundred and a thousand and other gifts of money and kine (Satāmaham Tirindire sahasram parsā vā dadeī rādhāmsi yādvanām. Trīni satānyarvatām sahasrā daśa gonām daduspajraya sāmne).

It is needless to enumerate more such passages. Anyhow all these may be undoubtedly taken to refer to some standard, and this standard seems to have been so common and well known that the priests did not take the trouble of mentioning it.

Wilson in his translation of the Rg-veda noted this point and made the observation that "it is not impossible however that pieces of money are intended, for if we trust Arrian, the Hindus had coined money before the days of Alexander." As for ourselves, we need not go to the time of Alexander, for long before that period the Buddhist books mention Niskas and Suvarnas of gold. In the 4th century B.C. too, according to the evidence of the

Arthaśāstra the Niṣka was a gold coin issued and regulated by the state.

The Niska, therefore, appears to us as meaning a metallic medium of exchange. This view would appear not only reasonable but will go to explain the meaning of passages where the word occurs. The passages which contain references to the wearing of Niskas (as necklaces) may be explained as pointing to the use of Niskas for ornamental purposes, a custom still in vogue in modern India. Moreover, when we examine the social and economic condition of the Vedic period, it appears almost impossible that a society highly developed, with abundance of gold and silver, and in which there were various kinds of money transactions (loans and debts on interest), did not know the use of precious metals for money transactions.

Niṣkas were both of gold and silver. We have no reference to their weight until we come to the later Smṛti works or to the Arthaśāstra. These works though later, seem to have preserved the old tradition. The weight of the Niṣka as given in Viṣṇu, Yagñavalkya and Manu (though differing from that given in the Arthaśāstra) was equal to that of four Suvarṇas, which was equal to $80 \times 4 = 320$ Kṛṣṇalas.

Thus says Manu (VIII. 135)—

Pañcakṛṣṇalako māṣaste suvarṇāsca śoḍaśa.

Palam suvarņa-catvārah palāni dharaņam daśa.

Yagñavalkya speaks in similar terms. Viṣṇu also says (IV. 10) that a Niṣka was equal to four Suvarṇas. (Catuḥ suvarṇako Niṣkaḥ.)

Apart from these Niṣkas, two other metallic standards of gold and silver came into use during the close of the Vedic period. Of these, the first was the Kṛṣṇala—a bit of gold equal to the weight of a Kṛṣṇala. This would appear from the evidence of the Kāṭhaka Samhitā and of the Taittirīya Samhitā. The first-named work refers to a gold Kṛṣṇala (XI. 4—e.g., Hiraṇya-kṛṣṇala). The other work (see—Taitt. Br., 1. 3. 6. 7) mentions the gift of one Kṛṣṇala each, to the participators in a race. It is mentioned also in the Taittirīya Samhitā (II. 3. 2. 1.) and in the Maitrāyani Sam. (ii, 2. 2).

As to the Satamāna of gold, it is repeatedly mentioned in the Kāṭhaka Samhitā and the Satapatha Brāhmaṇa. It was evidently a gold piece of the weight of 100 Kṛṣṇalas. In the Satapatha Brāhmaṇa, in connection with Rājasūya, we are told of the fastening of the round (vṛṭta) Satamānas, behind the hind-wheel of the cart-stand and these were then directed to be given to priests (Sat. Br., V. 4. 3. 24).

Kṛṣṇalas and Šatamāna. Many other passages (XII. 7. 2. 3.; XIII. 2. 3. 2.) contain this reference

to the Satamānas, which were given as fees to the Brāhmaṇa priests officiating in the sacrifice. The Satamānas were one of the principal metallic standards used in India, especially in those regions where the Black Yajurveda and the Satapatha Brāhmaṇa were composed. Later authorities like Pāṇini, Manu and Yāgñavalkya refer to these Satamānas which were both of silver and of gold (see Manu, VIII. 135 to 138 and Yāgñavalkya, I. 364-366).

STAMPING:—In conclusion we may sum up that the above-mentioned metallic pieces, were in large circulation in the various regions of India. Whether they were coined money in our sense and bore any stamp is yet to be decided. Dr. Thomas in his article on Weights and Measures (vide Numismata Orientalia) took the word Viśvarūpa to mean "pervaded or covered with forms and symbols" instead of "omniform" as suggested by others, and thus tried to prove that the Niskas were stamped and bore inscriptions. This is however going too far, and we cannot as yet base our conclusions on the evidence of a single word. The practice of stamping symbols, is rather late in the history of money, and as far as India is concerned this may be taken to hold good. Most probably the weight and fineness of these determined their value.

In connection with the circulation of these as well as in all transactions with regard to gold—the Kṛṣṇala came to be regarded as the primary standard of weight. The evidence of the Satapatha Brāhmaṇa seems to point to the acceptance of the Pāda— $(\frac{1}{4})$ as a standard (Satap., XIV. and Bṛhadā. Upa., III. 1.1., etc.).

Sources of Gold:—As to the sources of gold, very little is known. But this large circulation shows that there must have been sources of local supply. Even the Dravidians and Aborigines are spoken of as owning gold in the Vedic hymns.

Keith and Macdonnell are of opinion that in those days gold was obtained from the bed of the rivers (Vedic Index II, p. 504). They think that the extrac-

tion of gold from earth was known (R.V., I. 117. 5. A.V., XII. 1.6.). Washing for gold is recorded (Taitt. Sam., VI. 1.7.1; and Satap. Br., II. 1.1. 5).

The use of gold and silver, however, did not abolish Survival of earlier or put an end to the use of other standards. standards of value, and the cow served this purpose for a long time. According to the Dharmasūtras, fines for murder (Vaira) continued to be assessed in kine. Pāṇini, too, mentions the purchase of articles (with cows) in terms of the cow. Thus in his Sūtras we find the word Pancagu (anything purchased with 5 cows). Barter existed for a long time and even during the period of the composition of the Jatakas, rice was used as a standard of value.

CHAPTER VII

T

SOCIO-ECONOMIC LIFE IN THE VEDIC AGE

The hymns of the Rg-veda and the later Samhitās give us pictures of different stages of social progress. The absence of proper landmarks, as well as the difficulty in differentiating the strata stand in the way of separating these various phases of social evolution. In spite of this however two distinct phases of economic life can be distinguished, e.g.,

- 1. During the earlier of these two stages the nomadic instinct predominated. The tribes were more or less in a migratory condition; villages and settlements moved from place to place. In such a state of life cattle-rearing remained the chief occupation of people though agriculture during the period of temporary settlement was not altogether neglected. Constant wars, either with the aborigines for self-existence, or internecine feuds continued. Victory in battle not only ensured life and existence, but brought in the wealth of the conquered and consequently added to the prosperity of the community.
- 2. This state of existence was gradually supplanted by a more settled condition of life. Agriculture became the chief feature of social life. Everybody took to agriculture excepting perhaps the warrior or the

priest, who accompanied the conquering host. Villages were established in the midst of the fertile conquered country—the conquered being pushed back either to the hills, or allowed to live a life of servility on conditions of submission, service or tribute.

Land was plentiful. The conquering tribes were hardy and vigorous. They were as yet not imbued with any high notions of personal dignity. Labour was not distasteful to them. In such a state of affairs, their progress was rapid. The whole fertile plain of northern India was appropriated and colonized. Villages were established all over the country.

Each village contained a number of families; each family contained a number of able-bodied workers, who either had joint interests in the field, or worked under the authority of the head of the family, i.e., the Grhapati—the lord of the house.

The Grhapati, whether the eldest male number of the agnatic group or simply the father of the children, was the master of the house, who exercised control over the family, superintended their working in the fields, and performed also the sacrificial duties of the home.

II

THE VEDIC HOUSE

Each one of such families possessed its own separate dwelling. The Vedic house variously designated as Kṣiti—Dama, Pastyā, or Harmya, was so constructed

as to suit the needs of a people whose main occupations were agriculture and cattle-rearing. Generally it was a walled-up enclosure containing not only apartments for the family, but room for the sheep and cattle, so valuable to the Vedic householder. We get a good description of the Vedic house from the Atharva Veda (see A. V., III. 12; A. V., IX. 3) which gives us not only description of the house, but tells us of the contents of the house. In the Grhya Sūtras we find directions laid down as to the choice of the ground on which the house was to be constructed. In the Rg Veda, Atharva Veda and the Kauśika Sūtra we find innumerable prayers offered to "the God of the house" or to the "Queen of the house" for the safety of the house and the prosperity of the family dwelling therein.

From the description in the Atharva Veda, IX. 3., which concerns itself mainly with Vedic house the consecration of a newly constructed house, it appears that the house of the Vedic Aryans stood in the midst of a walled-up enclosure. It was constructed mainly of bamboo and wood. Perpendicular posts or vertical pillars (Upamit) were set up on the ground and there were cross-beams (Parimit). Bolts and ropes were used for fastening the poles. The roof was formed with bamboo poles and was thatched with straw or with mats of reeds. The Atharva Veda (IX. 9) describes the house as grasscovered and straw-clad. The extensive use of wood, bamboo and straw is further proved by innumerable prayers which we find in the Atharva Veda against the ravages of fire which readily consumed these materials, and thus put the family in a state of destitution and helplessness. In this connection the material used by Indo-Europeans in constructing their houses is worthy of comparison. According to Schrader the early Indo-European houses were built of wood, basketwork and loam and not of stone (see Schrader: Pre. Hist. Ant., p. 342).

The house generally contained several apartments. One was reserved for the sacred fire (Agniśālā). Some were reserved for the women of the house (Patnīnām Sadanam) or for other members of the family. In addition to these, there was a big store-room or Sālā full of clear corn (Pūti Dhānya) and sheds for sheep and cattle. In the Atharva Veda (III. 12) the owner of the house speaks of his sheep, goats and cattle. The house itself is described as a spacious store full of clean corn. Rooms were furnished with Sikyas for hanging vessels and contained the necessary furniture; e.g., wooden chairs, bedstead, the pestle and mortar, the winnowing basket, spoon, ladle, fork, wooden tubs, and earthen pots, etc.

In every house, guests were welcomed and attended to. The Atharva Veda (IX. 6)

Description of the mentions an Avasatha in this connection, but it is difficult to determine whether it was a big appartment set apart for that purpose. This was the Vedic house of simpler construction used by poorer householders. Most probably richer people and princes lived in more comfortable

dwellings made of stone or other materials. They seem to have employed door-keepers and a large number of attendants (A. V., IX. 6). In the Rg-veda we find mention of forts of stone and houses of three materials (R. V., VI. 46. 9) and in another place we find mention of a house with 1,000 pillars (R. V., V. 62. 6). But from this we cannot form any opinion as yet. The use of brick came into vogue during the time of the later Samhitās. Brick—both burnt and unburnt—were used for constructing fire-alters or pillars (see Yajurveda, XIV; Taitt, Sam.; and Satap. Br.).

The Vedic householder regarded his house as his stronghold and was intensely attached to it. The house was supposed to have its own presiding Deity and his favour was constantly sought.

The householder's devotedness to his dear home is amply expressed in a hymn of the Atharva Veda (see A. V., VII. 60) in which a parting traveller bids adieu to the houses of his village, in terms which amply express his warm attachment to his own house and the comforts dwelling therein.

HOUSEHOLD FURNITURE AND IMPLEMENTS.—As to household implements, utensils and furniture, we get some interesting details from the Atharva Veda (A. V., IX. 3 and A. V., IX. 6). Of implements there we find mention (apart from those used in sacrificial purposes) of the pestle and mortar made of stone, the winnowing basket, the spoon, the ladle, the fork, the stirring prong, cooking pots and jars (Dronakalasa), vessels (Pātrāni) made of metal, wooden tubs,

and various other things made of khadira or udumbara wood. Of other furniture, we have the Asandi which according to the Atharva Veda and the Brāhmanas was a rocking chair, made of wood and cordage, Prostha or lying bench for women, the bedstead, the pillow (Upabarhaṇa, coverlets) (Upastaraṇa Upavāsana) cushions and mats made either of grass or of kuśa, antelope's skin and such other articles. In the Kauśitakī Up., we find mention of the Paryanka and later on of the Prenkhā (see Kathaka, XXXIV. 5, Panch. Br., V. 5. 7. Dolā).

III

FOOD

FOOD:—From the above two hymns, in addition to scattered references elsewhere, we get some interesting details about the food and drink of those days. In connection with the food of Vedic Aryans the following may be mentioned:-

- (1) The milk (Payas) of the cow, goat, and buffalo was used. From it various preparations were made. Fresh milk (Payas) and mixed milk (Payasyā), are separately mentioned, as also butter (Navanīta), creamy butter (Phānṭa), Ghṛta, and curd (Dadhi). Goat's milk is mentioned in the Taitt. Sam. (V. 1. 7).
- (2) Various preparations of rice, barley and wheat and other food grains and cereals were used. barley, rice, or wheat were either parched or boiled in

FOOD 197

water or soaked in butter. Of fried grains we find mention of Saktu, Parivāpa, Lāja. Wheat, barley or varieties of food.

rice were often crushed powdered or boiled and made into various kinds of bread or cakes along with milk and other ingredients. Of such we have the Piṣta, Purodāśa, Apūpa, Pakti. Rice was often boiled in milk and this kind (Kṣīraudana) of food was highly valued. Brahmaudana was offered in the sacrifices (A.V., IV. 35.7, XI. 1.1, Taitt. Sam. III. 4.8.7). Other varieties of mess were used and we have mention of Dhadyaudana, Mudgaudana, Tilaudana, Udaudana, Ghṛtaudana, Mānisaudana.

- 3. Meat:—The Aryans seem to have been fond of meat-eating. The flesh of sacrificed animals, e.g., of the cow, the buffalo, the sheep, goat, and occasionally of the horse, was taken by all classes of people. In addition to these, the flesh of hunted animals and of various birds was taken. The taking of beef-or the flesh of the buffalo or the horse gradually came into disfavour. Meat boiled with rice (Māmsaudana) was highly prized. The question of beef-eating has been discussed separately, in connection with the cow. Moreover, various kinds of fruits and vegetables and honey were also largely used.
- 4. FISH:—We hear very little of fish-eating in the early Samhitās, though in later periods fish-eating was not condemned. Far from that, fish was regularly prescribed as food and was offered to guest and the manes.

IV

DOMESTIC LABOUR AND HOUSEHOLD ECONOMY

As the Grhapati looked after agriculture and the farm, many of the household duties were entrusted to the women of the house. The Grha-patnī (or the Grhapati's wife) was an 'alter ego' of the husband and assisted him in the management of the affairs of the family. The evidence of the marriage-ceremonial shows that assistance in household affairs was considered part of the wife's duties. She took part along with her husband in ceremonials and sacrifices. The Atharva Veda (XII. 3) shows how they joined in offering sacrifices and how she had often to take care of the household fire.

In matters of domestic economy, the wife had supreme voice. In the marriage-hymns she has been described as the Samrajñī in her father-in-law's house-hold. Philological evidence shows that in more ancient times it was the mother (Mātā) who distributed the food, while the daughter (Duhitā) engaged in milking kine. Similar duties were entrusted to the other ladies of the household. Weaving or plating was once entrusted to women. This is proved by an old simile which represents day and night as two women engaged in weaving and which has been already referred to. Again, the marriage hymn (A.V., XIV. 1.48) which speaks of goddesses wearing garments (see A.V., XIV. 2.51)

refers to the soft touch of the garments woven by the bride. Cooking was left to women, as is proved by many passages of the A.V. (XII. 3. 4), and by the evidence of the Taittirīya Samhita (V. 7). That the wife had to partake of the husband's burdens and household-duties seems to be suggested by some of the passages in a marriage-hymn of the Atharva Veda. For instance, we read: "Blest be the gold to thee, blessed the water, blessed the yoke's opening and blessed the pillar." (XIX 1. R.V., X. 85).

Here, the yoke's opening stands symbolical of agricultural operations, while the blessed pillar refers to the wife's participation in the work of the threshing floor. Husking, winnowing and many other similar duties were entrusted to women, though towards the close of the Vedic period slave girls and slaves were employed (see A.V., XII. 3. 13). The tending of the cattle, while at home, was part of the housewife's duties as would appear from a passage of the marriage hymn, in which Vrhaspati is asked to make her gentle to the cattle.

All these marriage hymns end with prayers for the long life of the married couple, and we have prayers not only for prosperity, devotion to the husband, but also for children, so that these when grown up might assist their parents.

The labour of women thus played a prominent part in domestic economy. Consequently, in the Vasor-dhārā hymn, we meet with the prayer that women might become industrious.

THE VEDIC HOUSEHOLDER'S CONDITION

From a study of the Vedic literature it would thus appear that the average Vedic householders lived a life of self-sufficiency. With the exception of the princely warriors or the sacrificing priests—high in the favour of the former, the mass of Vedic householders, depended mainly on their own exertions.

Every man had his farm and cottage. He worked his own fields; the agricultural products supplied the requirements of the family, and his chief wealth consisted of his cattle.

Life was simple. There was very little of luxury,

- No luxury no want.

as well as of scarcity. A man's wants were few and his own exertion placed him above want.

But this state of affairs did not last long. Conquest brought in wealth. Luxury invaded society, gambling, or want of thrift reduced families to poverty, and much of this wealth passed into other hands. Capitalism came to be introduced. Usury came to be the occupation of the rich. The merchant made large profits; the normal distribution of wealth was checked. Money came to be accumulated in the hands of the few. The land-less and homeless poor, had to live either by begging or had to take menial service. Craftsmen protected their own interests by forming unions.

As to the growing complexity of social condition, we find indications throughout the whole of the later

Vedic literature. In this connection the following points are to be noted:—

- (1) Growth of capitalism—proved by the existence of debts and usury and the growth of banking.
 - (2) Growth of a landed aristocracy.
 - (3) Growth of social inequalities.

VI

CAPITALISM

Capitalism grew. Its growth was facilitated by various circumstances and by various causes. Apart from the tendency to accumulation in the case of thrifty individuals, this was helped to a certain extent by the existence of freedom of disposal of property.

There was very little of restrictions on transfers, whether of chattels or of real property. A study even of the Rg-vedic hymns shows that from very early times, men enjoyed a certain amount of freedom in the disposition of their property. Sale of houses or lands either to a purchaser, or for the sake of satisfying debts to creditors, was allowed even in those days. The evidence of R. V. (X. 34) shows how a man could spend his whole fortune even for gambling.

In the case of heads of families, they were most probably unfettered in the matter of disposal of their property. As long as they lived they exercised some control over their children, but this authority of the head of the family never approached that of a Roman 'pater familias.' Children could divide in the very life-time of their father, and this added much to the freedom of disposal of property.

Money Dealings; Debts

DEBT.—The religious literature supplies us with very little information as regards money dealings. But in spite of this, we know something about these. Even from the evidence of the Rg-vedic hymns, we find the existence of money transactions.

In that book we meet with the word Rna, meaning debt. Debts were contracted for various purposes, gambling being one of them (R. V. X. 34. also A. V. VI. 119. 1). It often reduced men to slavery. Debtors were bound by the creditor, and according to some they were fastened to posts to be exposed before the public, pressure being thus put on them for repayment (R. V. X. 34). The Rg-veda contains references to the repayment of debts (R. V. VIII. 47. 17), and in the Atharva Veda we have prayers to the gods for absolution from sin arising from non-payment of debt. The information supplied by three hymns of

the A.V. is of interest in this connection (A. V. VI. 117, 118, 119).

In the first, absolution from the sin arising out of debt is asked for. Some passages are really significant and show how in those days non-

payment of debt was regarded as a sin which brought consequences in the other world. The reciter expresses

his willingness to 'throw away the grain to pay his debt' and prays further.

"May we be free in the world and that yonder.
In the third world may we be un-indebted.
May we debt-free, abide in the pathways, in all the
Worlds which gods and fathers visit."

The next two hymns ask forgiveness for cheating and incurring debt in dice-play. The last one contains a clear reference to an intention of non-payment, and shows how the moral idea came to be masked by motives of deception. The Kausika Sūtra directs these three hymns to be uttered on the occasion of repayment of debts, or on the decease of the creditors. The Atharva Veda makes a reference to the creditor's wife (A.V. VI. 118) to whom, probably, the debtor was liable to pay on the demise of her husband.

The consequences of debt told heavily on the debtor, and consequently on society. The evidence of R. V., X. 34, shows that the debt for gambling reduced people to poverty. Everything was exacted, even the dwelling houses were sold, and men became homeless and destitute.

In some passages of the Rg-veda and Atharva Veda, there are references to interest, but we know nothing about the rates of interest. The Rg-veda contains the word Bekanāṭa which according to Yāska means a usurer. According to the interpretation suggested in some passages of the Rg-veda (R. V., VIII. 47. 17 and A. V., VI. 46. 3), the rate seems to have been one-eighth or one-sixteenth (V. I., II., p. 109).

In the Atharva Vedic passage, which occurs in a hymn to avert the bad consequences of evil dreams, the citer assigns the evil to the enemy with an addition of 1-8 or 1-16, as in the case of repayment of debts. With the growth of capitalism a new class, i.e., of usurers arose as is proved by the evidence of the word Kusidin. Probably the rate of interest became heavy, and consequently we find a denunciation of the usurer in the Dharma Sūtra literature, where we find attempts to fix rates of interest.

Banking.—Money accumulated unquestionably in the hands of the rich, but we have no clear reference to organised banking or banking transactions. The word Sresthin, meaning a man of consequence, occurs in the Brahmanas (Ait. Br., III. 30. 3; Kausit. Br., XXVIII. 6; Kaus. Upa., IV. 20 etc.). According to the Taittirīya Br. (III, 1. 4. 10) Bhaga was the Sresthi of the gods. As to the real meaning of the word, we have differences of opinion. Hopkins is inclined to take it in the sense of a modern Seth. Macdonell is inclined to believe that the Sresthi was the headman of a guild.

VII

DEVELOPMENT OF A LANDED ARISTOCRACY

Landed Class.—In the earlier stage of simple agricultural life every householder owned his plot of land, tilled it, lived a life of simplicity, and practically supplied his own needs. In those days there was

hardly anything like a landed aristocracy. The king of the tribe could of course claim his Bali or tribute (see R. V., X. 173), but there is practically no evidence of intermediatory landlords. Gradually, however, a class of landed aristocracy arose and this may be attributed to:

- (1) The custom of granting villages to faithful servants by the ruling princes, a practice common to all ages and countries. Of this we have no direct evidence, but we may presume that such gifts Growth of landlords. were common, since princes thought of strengthening their own position by creating a band of faithful adherents.
- (2) The grant of villages to sacrificing priests or Srotriyas. We have no early Vedic evidence, but later we find one instance of a gift of a village by Jānaśruti to Raikka, when the latter agreed to teach him the Deity he worshipped (Chān. IV. 2. 4.) Such gifts were indeed common, and out of such gifts arose the class of rich Brahmin landlords—the Mahāsālas or Mahā-śrotriyas, first mentioned in the Chandogya Up., who were so common in the early Buddhist Sūtras, where they are described as enjoying the revenue of villages.
- (3) The acquisition of superior rights by men of merit over equals. As to these people we have no evidence either in the Rg-veda or the Atharva Veda. But when we come to the Taittiriya Samhita or the Maitrāyanī Samhitā, we find in connection with special sacrifices, the various rights for gaining mastery

over villages. We have directions for the propitiation of Indra or the "all gods" which enabled men desiring villages (Grāma-kāmas) to become owners of villages—i.e., Grāmyas or Grāmins. The chief interest of the evidence of these passages lies in the fact that these village-lords attained that position by acquiring pre-eminence over equals (Sajātas and Samānas).

VIII

SOCIAL INEQUALITIES; WEALTHIER CLASSES—THEIR ORIGIN

As to social divisions, we find, in addition to the princes, the existence of a rich upper class from an early period. The Rg-veda mentions Mahākulas figuratively, and the Maghavan (givers of beauty R. V. I. 31. 12; II, 6. 4. V. 39.4; VI. 27.8) who were distinguished by their liberality. They were probably the representatives of the richer classes and are repeatedly praised. The wealth of the princes who stood on a higher level, can be measured from the innumerable stories of gifts of gold Wealth of Princes. kine, horses, and ornaments which they bestowed upon the priests. The Danastutis in the Rg-veda (R. V. VIII.) speak of the munificence of these princes. Thus, one sacrificer praises Asanga (VIII. 1), another Medhatithi praises Vibhinda, who gave him 48,000 pieces probably of gold. A third praises Kurunga's gift of 100 (VIII. 4), another praises the munificence of Kasa, the son of Cedi, who gave

his priest "a hundred heads of buffalo and ten thousand kine." There is another which mentions the gifts of a prince, which included 10,000 kine and three hundred horses. Another hymn records the receipt from Pṛthuśravas, 60,000 pieces, ten thousand kine and 2,000 camels (VIII. 46), another records the bestowal of "kine bedecked with ornaments of sparkling gold"; another records the gift of 50 slave girls (VIII. 19), while yet another records the gift of 100 asses, 100 slaves and sheep. Many other hymns speak of large money-gifts in standards not specified therein.

As in the case of princes, the wealth and liberality of the rich Maghavan is clearly apparent. The munificence of the rich Maghavan may be appreciated from constant praise bestowed on the people who made gifts of horses, cattle, clothes, and gold to their priests (see R. V. X. 107). They are praised in glowing terms, and they came to occupy a high social position. In one place, munificence is described as making a man the chief in his village (X. 107) and highly honoured by the community. We are told that "the liberal die not—

neither are they ruined, they suffer neither harm nor trouble—the light of Heaven, the universe about us, all this doth sacrificial guerdon (gift) gives him."

The Taittirīya Samhitā goes further and says that "wealth is the true basis of excellence."

POVERTY OF SOME SECTIONS.—On the other hand the evils of unequal distribution were very keenly felt. The misery of the homeless and starving poor is des-

cribed in some passages of the Rg-veda. Some hymns (see X. 117) of that book tell us of the hungry poor, who go to others for food. The whole of the 117th hymn of the tenth Mandala, dedicated to 'hunger' and attributed to 'Bhikṣu,' repeatedly inculcates upon the rich the duty of feeding the poor. Society expected the rich to contribute to the alleviation of distress and the miserly conduct of the nigardly rich was denounced. "The man who does not offer to the gods, nor give alms to the poor," we are told, "is a miser who feeds upon sin only."

The same hymn (X. 117.9) dwells upon the inequality of human fortune and of liberality (capacity to give alms to the poor). The similes there are really suggestive. We are told that as the two hands of a man are not equal, as two cows born of the same mother differ in their milk-bearing capacity, as the strength even of twin brothers is not equal, even so men are not equal in their fortune or their liberality.

The preceding verses tell us how the unequal distribution of wealth came to play a predominant part in the evolution of society, how the rich came to be adored by men of lesser social position or wealth, and how the poor sank lower in the social scale.

As we proceed onwards, we find a multiplication of hymns directed against poverty. Wealth came to be a criterion of social position; social inequalities grew more and more, and the old state of simple existence passed away.

TX.

CASTE-DIVISION

Apart from this division into rich and poor, we take into account another, i.e., the caste-division which played so great a part in the evolution of the sociopolitical ideals of India. With the evolution of the caste system, society came to be regarded as something of an organism, with different duties entrusted to its various parts. The caste theory was developed and presented theoretical solutions of many problems. It solved the problem of division of labour as also the divergences of classes and of their eternal struggle.

THE BRAHMANAS :- PRIESTS. - Of the castes, the priestly classes were the happy recipients of the gifts bestowed by the princes and became rich. Sacrificers and givers of alms were common among them. The sages who composed the Danastutis were rich men, whose wealth is sure to be regarded as considerable even in our own days. Not to speak of these, the ordinary priestly householders seem to have been above want. They relied on their farms managed by men of the Sūdra caste: cattle was their most valuable asset. Even hermits like Gautama, the preceptor of Satyakāma Jāvāla, owned herds of 400 cows or more. The patronage of princes contributed to the growth of the rich and wealthy Mahāsālas and Mahāśrotriyas among the Brahmins who are mentioned in the later Upanisads and who find so; prominent a place in the Buddhist Sūtras. (see Chāndogya. Up. V. 11)

THE KSATRIYAS.—Of the next caste, e.g., that of the Kṣatriya Princes, who were the rulers and fighters we may speak little. They were the real masters of the country and lived a life of luxury and munificence. The relation of the ruling chiefs to their poorer kinsmen—the Rājanyas, is not known. Probably they too were above poverty, owing to the patronage of their ruling kinsmen.

The Vaisyas.—Of the Vaisyas, who were mainly agriculturists and craftsmen, we lack more precise information. But, there is reason to believe that this class, though they had somewhat lost their social position and were oppressed by the princes, were industrious and rich. To save them from the exactions of the Kṣatriya rulers, they formed their guilds, and thus became powerful. They often performed great sacrifices. The rich Sreṣṭhī bankers probably belonged to this class.

THE SŪDRAS.—As to the Sūdras, they were mostly freemen. They too engaged in agriculture and in the lower arts. Some of the Sūdras were very rich and the Mahābhārata preserves a very old tradition about a Sūdra named Paijavana who performed numerous sacrifices and bestowed one hundred thousand sacrificial fees to priests. Some of the lower craftsmen and most of the menials and servants belonged to this caste.

Lastly, there were the slaves. They are mentioned throughout the Vedic period. They were unfree and had to serve their masters. We have mention of gifts of slaves made by princes, but we hear nothing of slave-

markets. Moreover, in the absence of positive evidence to the contrary, we may hold that in the Vedic period, as in all subsequent periods, slavery never became the basis of industry or of economic life. The absence of slave-markets may be taken to mean that they were never largely employed, and that the institution of slavery never attained that importance which it did in Greece, or Rome or in the social system of the Semitic countries.

X

GOVERNMENTAL IDEAL AND THE CONCEPT OF SOCIAL DUTY

Before we pass on to a study of the next period, something ought to be said as to the early ideas as regards the duty of Government to the community. This will throw a flood of light on the social concepts of the day, as also on the socio-economic problems, which attracted their attention.

As to the theory of the state, the material at our disposal furnished by the religious literature of the ancients is indeed very scanty. But one feature of the Hindu state-concept is indeed interesting. In the coronation ritual, in the midst of minute regulations of life and conduct, in the midst of a maze of ceremonials and elaborate rituals, one duty is constantly enjoined on the king, i.e., the welfare of the people through him. The state is conceived as an institution for doing good to the subject. In its theoretical exposition we find not only an idea of protection and justice but also the predomi-

nance of economic considerations. Not only was it the duty of the head of the state to protect life and property but also to help his people in furthering the material aspects of life. It is interesting to compare this ideal with similar ones found among the Jews and some other nations of antiquity. Thus in the Yajurveda, in connection with the inauguration of a king, the priest addresses him as follows: (Vāj. Sam., IX. 22).—

"Oh Lord—here is thy kingdom—be thou its ruler and guide. Remain steadfast in thy position—Thou art here, to see that agriculture may flourish—and the prosperity of the country remain unbounded—that the people may be wealthy and that there may be proper nourishment of the people."

[Iyam te rāṭ | yantāsi yamano dbruvo'si dharuṇaḥ | kṛṣyai tvā | kṣemāya tvā | rayyai tvā | poṣāya tvā ||]

The above passage proves conclusively, as to how the economic side of national life received its fullest attention from the head of the state. Other important passages throw light on the correlation existing between the various aspects of life and show how the community conceived of social happiness as depending upon the proper discharge of duties entrusted to the various classes and castes, not to speak of the other elements and agents of nature. Not only does the theory of division of labour play a prominent part in them but there is also a clear indication that the ancients looked to the solution of the economic problem as the chief criterion of worldly happiness. The universe itself was regarded as an organic whole in which each agent was

to perform his part whether divine or human. To perpetuate the working of Nature's great phenomena, the gods were to do their part and under them men were to discharge their respective duties. This is amply illustrated by the following passage which may be cited to show the ideal of happiness which a king prays to the gods for his country to attain (Vasordhārā Hymns; Vāj. Sam., XXII. 22, etc.):—

"O Brahma, let there be born in the kingdom, the Brahmana illustrious for religious knowledge; let there be born the Rajanya, heroic, skilled archer, piercing shafts-mighty warrior; the cow giving abundant milk; the ox good at carrying; the swift courser; the industrious woman. May Parjanya send rain according to our desire; may our fruit-bearing plants ripen; may acquisition and preservation of property be secured to us. " (Vāj. Sam., XXII. 22, Trans. Griffith.)

🖪 A Brahman Brāhmano brahmavarcasī Jāyatām tā rāstre Rājanyah Sūra işavyo'tivyādhī mahāratho Jāyatām! dogdhrī dhenuh | bodhāndvānāsuh saptih purandhrih | yosā jisnuh I rathesthāh saveyo yuvāsya yajamānasya vīro jāvatām nikāme vikāme nah Parjanyo varsatu phalavatyo na osadhayah pacyantam yoga-ksemo nah kalpatām II

The social ideas of those days thus imposed upon the king some active duties. These remained no mere ideals. We have evidence in the praises of monarchs of how the theoretical concept of royal duty was translated into practice. To quote one of many such passages, in the Atharva Veda, we have a subject of

Pariksit singing the praise of the latter. In the eulogy which he bestows, he does not forget to mention in praise of his king, and sovereign, that agriculture and husbandry were in prosperous condition, that peace and happiness reigned in the kingdom, and that scarcity was hardly known:—

7. "List to Parīkṣit's eulogy, the sovran whom all people love,

The king who ruleth over all, excelling mortals as a God.

8. 'Mounting his throne, Parīkṣit, best of all, hath given us peace and rest,'

Saith a Kauravya to his wife as he is ordering his house.

9. 'Which shall I set before thee, curds, gruel of milk or barley-brew?'

Thus the wife asks her husband in the realm which King Parīkṣit rules.

10. Up as it were to heavenly light springs the ripe corn above the cleft.

Happily thrive the people in the land where king Parikṣit reigns.

11. Indra hath waked the bard and said, rise, wander singing here and there.

Praise me, the strong: each pious man will give thee riches in return.

12. Here, cows, increase and multiply, here horses, here O men.

Here with a thousand rich rewards doth Pusan also seat himself." (A.V., XX. 127, Trans. Griffith.)

BOOK III

THE SECOND OR THE PRE-IMPERIAL PERIOD

(Cir. 1000 B.C. to Cir. 400 B.C.)

BOOK III

CHAPTER I

Ι

THE SECOND OR THE PRE-IMPERIAL (PRE-KAUTILYAN) PERIOD

(Cir. 1000 B.C. to Cir. 400 B.C.)

The main characteristics of this period, from the point of view of economic history, have been summarised in the first book (pp. 78-83). For the sake of convenience they may be repeated here as follows:—

 Growth of towns and town-life owing to further industrial development.

2. Definite establishment of direct commercial intercourse with many of the nations of western Asia.

3. The great importance of the guilds which exercised very great influence upon the industrial organisation and economic life of the country.

4. A large circulation of metallic currency and the introduction of the Kārṣāpaṇa coinage.

EXTENT OF ARYAN OCCUPATION.—Before entering into a systematic study of the economic condition of this period we must first of all try to estimate the extent of the country brought under Aryan influence. Of the political divisions and the area of the country

colonised by the Aryans, we derive our information from the Buddhist canonical literature, the Sūtras of Pāṇini and other ancient Indian works. Pāṇini's information as regards the country is confined to the northern and western part of India. He mentions the Sindhu-Sauvīra country, Kapisā, Mādra, the extreme north-western country, the Vāhika land and the countries inhabited by the Kurus, the Uśīnaras, the Andhakas, the Vṛṣṇis, the Vṛjis and some other tribes. The early Pali books mention the sixteen great divisions of India (the Solaśa-mahājanapadāni) of which a list is found in many places of Pali literature. They are as follows:

Kurn Anga Magadha Pañcāla Kāsi Maccha Kosala Sūrasena Vajji Assaka Malla Avanti Ceti Gandhāra Vamsa Kamboja.

Kalinga is also mentioned. We know further that a large part of country west of Kalinga, in Central India, was covered with dense forest, for we meet with the mention of a forest called Kalingārañña. Vanga must have been known, as we may infer from the expression Vangantaputta Upasena (e.g., Upasena

¹ I am indebted to my friend Prof. S. N. Mitra of the Post-Graduate Pali staff. The name of this great teacher Upasens with the epithet Vangantaputta occurs in the Nikāyas. Later on, references to him are common. They occur in various places of the Milinda Panha.

hailing from the Vanga border) in the Vinaya text. (I. XIV. 3.)

Next we have the Jātaka evidence. The evidence of the Jātaka stories as to the extent of the country known in those days, shows a distinct advance. They show a more intimate knowledge of Southern India than the early Buddhist books. Thus, in addition to the regions mentioned above, the Kalinga country is expressly mentioned in the Kurudhamma Jātaka (No. 276). The Sarabhanga Jātaka places the Avanti country in the Deccan and mentions the Godavarī river, and the Daṇḍyakāraṇya (Daṇḍaki). Another South India in the Jātaka (524) mentions a Māhimsaka Jātakas.

Another (480)—the Akiti Jātaka mentions the Damilaraṭṭha, the Damila country, and speaks of Kāvirapattana and of two islands near it, viz., the Nāgadīpa and

rattha, the Damila country, and speaks of Kāvirapattana and of two islands near it, viz., the Nāgadīpa and Kāradīpa. And as these Jātakas seem to be very old, inasmuch as they contain the old verses, the evidence furnished by them cannot be rejected on the ground of modernity or of later interpolation.¹

From the above, we may gather that practically the greater part of northern India extending in the east to the frontiers of Bengal, and in the south a large portion of the Deccan was known in the time of great Buddha in the 6th century B.C. As to the extreme south we have very little information from contemporary Hindu

¹ References to Odda, the Orissa country and various other localities are to be met with in the Majjhima Nikāya. We have, however, refrained from going into details, as these are quite out of place here.

and Buddhist sources. We may, however, presume that a large portion of the south had been colonised or even known by the Aryans by that time, because in the 4th century B. C. Kautilya, the author of the Artha-sastra, shows himself to be familiar with the extreme southern country.

\mathbf{II}

THE GROWTH OF TOWNS

Towns and Town Life.—As we have said, in the Vedic period town-life which is so closely associated with the growth of industry and commerce was not developed. Only in one place of the Vedic literature (Yajurveda, Vaj. Sam. XXIV. 18. 4) we have a reference to a city named Kāmpila (Kāmpilya?) and that is also disputed. In Pāṇini we have mentioned of some towns and Takṣaśila and Sālātura are some of them.

When we come to the 6th and 7th centuries B. C., we have many important cities which existed at the time of the rise of Buddhism and Jainism. A list and description of these is given in Rhys David's Buddhist India (pp. 34-41). The following are the more important of them:—

- 1. Ayodhyā (Ayojjhā) was quite unimportant in Buddha's time.
 - 2. Bārānasi-(Bānārasi)-(Benares) is famous in early Jain and Buddhist literature. It was once the capital of an independent kingdom. The Brahmadattas the kings Bārānasi are repeatedly

mentioned in the Jātakas. Later on, it had been absorbed by the Kośala monarchy. The fine silk and muslin fabric of Benares was famous in the those days. It was a great centre of the textile industry.

- 3. Campā—The ancient capital of the kingdom of Anga.
- 4. Kāmpilya—(Kampilla) the capital of North Pañcāla.
- 5. Kosambi or Kauśāmbi—The capital of the Vatsas. It was one of the most important halting place both for goods and passengers coming to Magadha.
- 6. Madhurā-(Mathurā)—Capital of the Sūrasenas. It was visited by the Buddha.
- 7. Mithila—the capital of the Videhas.
- 8. Rājagrha-(Rājagaha, Rājagiha).—It is mentioned in the Buddhist and Jain literatures, and was once the capital of Magadha.
- 9. Roruka—Was the capital of Sovīra. It was an important centre of coasting trade mentioned in the Digha Nikāya (XIX. 36).
- 10. Sāketa—It was one of the great cities mentioned in early Buddhist literature. (Rhys Davids, Buddhist Suttas, p. 99.) The name occurs in the early Jain list of towns.
- 11. Srāvasti-(Sāvatthi)—The capital of northern Kośala and the seat of King Pasendi (Presenajit), is also mentioned in early Jain literature.

- 12 & 13. Ujjaini-(Ujjeni) and Māhismatī. Māhissati is mentioned in Dīgha N. (XIX. 36.).
- 14. Vaisāli or Vesāli. It was the capital of the Licchavis. It was also the birthplace of Mahavīra.
- 15. Patițțhāna or Paithana.

In addition to these we have reference to Dantapura on the Kalinga coast, Bharukaccha and Suppāraka.

In the early Jain literature, which of course derives its information from sound tradition, we have a list of the towns which existed at the time of the rise of Jainism. The Uvāsagadasao (Lec. 10) mentions Vaniagāma, (Vaiśāli), Campā, Bānāraśi, Polasapura, Townsin Jain Litera. Rājagiha, Setavya, and Kāmpillapura. In other places we have a list of 20 towns, e.g., Bārānaśi, Savatthi, Vesāli, Mithilā, Alavi, Kosāmbi, Ujjaini, Takkhasilā, Campā, Sagula, Sumsumāra, Rājagiha, Kapilavastu, Sāketa, Indapattha, Ukkaṭṭha, Pātaliputtaka, Kusinārā and Samkassa. (See Uva. Da., p. 52). According to the Jain tradition Vaniyagāma was a big city which included in addition to Vesāli the suburbs of Kundagāma and Kullaga. See Trans. Uva. Dasao, p. 4).

In addition to these names mentioned above, we find the names of many Nigamas and Nagaras in Buddhist literature. Thus Ukkaṭṭha is mentioned in the Dialogues of Buddha. In the Majjhima Nikāya, the city of Aṭṭaka is mentioned as well as the Nigama of Assapura, in the Aṅga country, Kīṭagiri in the Kasi country, and Halidda-Vaṃsa Nigama in the Koliya country. These

Nigamas, of which we have some mention in the Jātakas, were market-towns or villages, and seem to have derived their importance from being commercial centres.

Towns were generally walled up (Bud. Ind., p. 63)

and often fortified (See Greek description of Pataliputra) and contained in addition to the palaces of princes and rich men, the houses of tradesmen and common people. As to the material used in building these houses, it has been described in "Buddhist India" (page 64 to 70). The houses were mainly of wood, though the rich used to live in palaces of stone, or in brickbuilt houses. The mason's art had reached a high stage of perfection, and they were amply paid Life in Towns. for by the rich employers. The high economic development and luxury of the upper classes is apparent from the direction in the Vinaya for the construction of plaster work, the mention of the various patterns (Bud. Ind. p. 68) and the description of the hot air baths in the Vinaya texts (Vinaya Texts III. 105-110 see also Bud. Ind., p. 74 also p. 78 in connection with drains).

Stone seems to have been largely used before the 6th cen. B.C. The poorer sections of the population lived in one storied thatch-roofed houses. The raising of lofty monuments of considerable size had become the practice with the rich.

The city walls were protected by moats and ramparts and contained watch-towers at intervals, which were constantly garrisioned with troops. The city walls contained high and lofty gates for the entrance and egress of inhabitants. About the early hours of night these gates were closed, and entrance and egress were forbidden. The story of how king Pasenadi of Kosala was kept out of his capital by the stratagem of Dīgha Kārāyana, and how this made him lose his kingdom, amply shows the stringency of the rules for closing the city gates. Apart from this scanty information, we know nothing of the city from the earlier Buddhist books.

The influence of the development of industry and of the guilds on town life was immense. Though we have no detailed description of any Indian town in early literature, we may pre-suppose the condition of city life from accounts, which though late in point of time may be utilised without the risk of falling into the error of anachronism.

All these accounts concur in describing an Indian city as completely walled up and divided into different quarters which were allotted to men of different castes and trades excepting the Caṇḍālas and Pukkusas who lived outside the city.

Thus from Jain literature we know that the Kṣattriya quarter of Vaniyagāma was different from that of the Brahmins. The Artha-śāstra (see pp. 54, 55) too speaks of different quarters, for men of different castes and callings (see also J. R. A. S., 1901, pp. 860-862). That work gives us, in addition, other details which are of great service to the historian who tries to draw a picture of the city so far as economic life is

concerned. The Greek descriptions of Pāṭaliputra seem to confirm the account of the Artha-śāstra, and all this will be related in connection with the history of the next period.

TTT

TRADE ROUTES

TRADE-ROUTES.—These towns were great centres of trade and manufacture. Merchants moved with their manufactures from one city to another. In the oldest Pāli books we have accounts of the journey of great teachers and from these and other sources, Prof. Rhys Davids has proved the existence of the great trunkroads which connected the important centres of trade and manufacture. We find the description of these trade-routes and stopping places in his Buddhist India.

"We have accounts of routes actually followed by merchants either on boats, or with their caravans of bullock carts. We can thus draw up provisionally the following list.

- 1. NORTH TO SOUTH-WEST.—Sāvatthi to Patitthāna and back. The principal stopping places are given (beginning from the south) as Māhissati, Ujjenī, Gonaddha, Vedisa, Kosāmbi, and Sāketa.
- 2. NORTH TO SOUTH-EAST.—Sāvatthi to Rājagaha. It is curious to note that the route between these two ancient cities was not direct; it was along the foot of mountains to a point north of Vesāli and only then turning south to the Ganges. By taking

this circuitous road the rivers were crossed at places close to hills where the fords were more easy to pass. But political considerations may also have had their weight in the original choice of their route, still followed when they were no longer of much weight. The stopping places were, beginning at Sāvatthi, Setavya, Kapilavāstu, Kusinārā, Pāvā, Hattigāma, Bhaṇḍagāma, Vesāli, Pāṭaliputta and Nālanda. The road probably went on to Gayā and there met another route from the coast, possibly at Tāmralīpti to Benares.

3. East to West.—The main route was along the great rivers, along which boats plied for hire. We even hear of express-boats upwards the rivers which were used along the Ganges as far west as Sahajāti and along the Jamunā as far west as Kosāmbi. Downwards, in later times, at least the boats went right down to the mouths of the Ganges and thence either across or along the coast to Burma. In the early books, we hear only of the traffic downward as far as Magadha, that is, to take the farthest point Campā. Upwards, it went thence to Kosāmbi, where it met the traffic from the south and was continued by cart to the southwest and northwest.

Besides the above, we are told of traders going from Videba to Gandhāra, from Magadha to Sovīra, from Bharukaccha round the coast to Burma, from Benares down the river to its mouth and thence on to Burma, from Campā to the same destination. In crossing the desert west of Rajputana, the caravans are said to travel only in the night and to be guided by a land-

pilot, who just as one does on the ocean, kept the right route by observing the stars. The whole description of this journey is too vividly accurate to life to be an invention. So, we may accept it as evidence not only that there was a trade-route over the desert, but also, that pilots, guiding ships or caravans by the stars only, were well known. In the solitary instance of a trading journey to Babylon we are told that it was by sea, but the port of departure is not mentioned. There is one story, the world-wide story of the Sirens, who are located in Tambapaṇṇi-dīpa, a sort of fairy-land, which is probably meant for Ceylon. Lankā does not occur."

Traffic with China is not mentioned until we come to the next period, when we find mention of Cina in the Arthasastra (in connection with silken goods). Alexandria, in Bactria, and some islands in the Eastern Archipelago, in addition to various countries are mentioned in the Niddesa commentaries Other details. and the Milinda which belongs to the next period (pp. 127, 327, 359. Trenk. Ed.). The Mahāniddesa commentary records journeys to various towns and places, and dwells upon the difficulties of the way. The difficulties of caravans crossing the deserts or moving through narrow paths or paths infested by enemies are figuratively described as Ajapatha (goat-path), Bannupatha, Musikapatha (rat-track), Verapatha (enemy track) or as Maranapāra (region beyond death). The use of the land-pilot is described in a Jataka (No. 108) where we find a vivid picture. Some of the Jatakas seem

to have preserved the original tradition as to the state of affairs which existed at the time of the rise of Buddhism and their evidence may be accepted.

v

SEA VOYAGES

The Nikāyas speak of sea voyages out of sight of land, referring probably to voyages across the ocean, and not mere coasting-journeys. They mention many of the settlements and ports on the sea-coast. Thus, according to Prof. Rhys Davids, we have references settlement of Dantapūra on the Kalinga and probable references to the ports of Bhrrukaccha and Suppāraka (Rhys Davids, Bud. Ind., p. 31).

The Jatakas mention many sea-coast towns and some coastal regions. Thus, the Ghata Jataka contains references to the city of Dvārāvatī, while another (424) mentions the city of Roruka in Sovira. The Pandara Jātaka (518) mentions another city on the sea-the Kalambika Pattan. The Akitti Jataka mentions the port of Kavirapattana.

In connection with sea voyages, we get some more information from the Jātakas. Thus Baveru Jātaka (339) evidently speaks of a voyage to Baveru (Babylon), another the Valahassa (196) speaks of voyages to Tambapanni or Ceylon (Jāt. II. 127), while other Jātakas (e.g., the Sankha 442 and Mahajanaka 539) speak of voyages to Suvannabhūmi or regions of the Eastern

peninsula. Tambapaṇṇi is also mentioned in the Mahāniddesa. In connection with sea-voyages we hear of pilots who were helped in steering the vessel by watching the stars and by observing the flight of birds (Disākāka), which is described in the Anguttara Nikāya (III, p. 368). Another reference to the use of birds to guide the pilots is found in the Kevaddha Sutta. Sakunapatha is referred to in the Mahāniddesa. The Jātakas, too, describe the use of these Disākākas (Bābheru and Dhammaddhaja, 339 and 384).

CHAPTER II

Ι

AGRICULTURE AND VILLAGE LIFE

VILLAGE.—RURAL ECONOMY: DISTINCT TYPES OF VILLAGE—Inspite of the growth of these innumerable towns, of which a list has been given above, villages still remained the main centres of activity for the ordinary mass of the agricultural population. From the evidence at our disposal we are enabled to distinguish two main types of village:

- (1) the ordinary agricultural village.
- (2) the industrial village arising out of the congregation of men of the same craft in one village.

Some villages were exclusively peopled by men of the same caste or Varna. Thus we hear of villages exclusively peopled by Brahmins (see Majj. Nikāya, Vol. I, p. 285). Similarly, we have villages peopled by the Kṣatriyas, Vaiśyas or exclusively peopled by Sudra castes. As to the industrial village of craftsmen and working people (all following the same occupation or trade) we find innumerable references in the Jātaka literature. Thus we find mention of villages of carpenters (Jāt. No. 159) containing 1000 families; villages of smiths (Jāt. No. 281), potters and other craftsmen.

In the ordinary agricultural villages and in towns in general, the population was a mixed one. Men of

all Varnas lived there, pursuing their different occupation, trade, or calling. The majority of inhabitants were cultivators or workmen. But there were in addition to these, merchants and craftsmen who formed guilds for their own protection. The history of the origin of these guilds, their purpose and their organisation will be described in detail in a separate section entirely devoted to it.

As to the causes of the rise of the industrial village, we have but little information Causes of the rise of may however be suggested, that the the industrial village. main cause which contributed to their growth was that before the development of industry, the industrial population was attached to the village, earning their livelihood by supplying the requirements of the agriculturists. As will be shown later on, this was the case in most villages of Panini's time. With a greater demand for the products of their labour, they found the opportunity of freeing themselves from the tutelage of the agricultural interest. This was most probably opposed by the villagers, who found the retention of the ruralised industry to their advantage. This selfishness on the part of the villagers made the craftsmen unite into corporate organisations and they withdrew to places where they had better opportunities of pursuing their own occupation, unmolested, and without any opposition from those classes whose interest it was to keep them in a state of tutelage.

RURAL ECONOMY AND AGRICULTURE.—As has already been said, the village remained the centre of life

for the mass of the agricultural population, the industrial poulation mainly congregating in towns or in their own villages.

The village arrangements remained practically the same as at the end of the previous period. In the centre was the inhabited portion containing the homestead of the villagers. Around this inhabited portion was the village field (Ksetra or Khetta) and, as far as we know, this village field was wider in Village arrangement. Magadha (see Vin. I. 287; II, 186). As to the arable land, individual ownership was fully established and the owners or occupiers of the plots cultivated their own fields, aided by their family or with the help of slaves or hirelings.

Land.—As we have shown already, in the previous period there was a feeling against the land transfer (Satap. Br. XIII. 7.15) but in this period we find that gradually this opposition had died away, so far as this transfer or transaction was carried on between members of the same village. Thus, according to Mrs. Rhys Davids,

- 1. Land could be let against half or any other stipulated share of produce. (Apastamba. D.S. II. 11. 28; I.6.18).
 - It could be made over as gift to another. 2.
 - It could be sold (Vin. II. 158. 159) 3.

(J. R. A. S., pp. 860, 1901).

Opposition to the introduction of new-comers still remained, as is evidenced by passages of the Arthaśāstra.

ROYAL SHARE AND ITS COLLECTION.—Of the raw produce a share was given to the King as annual tithe. This royal share which is found in Pali books as well as in the Dharmasūtras varied according to different authorities (D. i, 87 see also Vaśistha, Dh. Sū; also Gautama, Gh. Sū. X 24). Probably it varied with different localities and during successive ages.

ROYAL GRANARIES.—The produce of fields was taken to public granaries for the excision of the royal tithe before taking these to the barns of the respective owners. This payment in kind is apparent from the description in Kurudhamma Jātaka (276) and the royal official who measured out this royal share was called the Droṇamāpaka.

STOCKS TO WARD OFF PUBLIC DISTRESS.—Kings seem to have kept special granaries for urgency (Indian Antiquary, 1896. 261). This was continued by later kings as is proved by the evidence of the Arthasāstra, which directs the retention of half the annual produce in royal granaries, for the relief of distress arising out of famines. Kings provided poor persons with food and seed corn to enable them to start farming—(D. i. 135). In the next period we find confirmation of this from the Arthasāstra. (See. Sohguara Plate, Supra, Ind. Ant., 1896).

Occasionally the king made over the tithe to others (D. 1. 87). In the oldest Pali literature we find innumerable grants of villages (as Bhogas—Jaigirs?) to the Mahāśālas who held them as Brahmadeya land and

were mostly Brahmins (see Dialogues of the Buddha;—in the Ambaṭṭha Sutta we find Pokkharasādi of Ukkaṭṭha enjoying such a Bhoga); occasionally we hear of Kṣatriya Mahāśālas.

VILLAGE HUSBANDRY; CORPORATE UNIT.—As before, the villages had their common grazing ground and common herdsmen (see M. 1. 122). Beyond this belt of land was the Aranya which was a sort of no man's land frequented by hermits, wanderers or robbers. The village was not only a self-sufficient whole but was regarded as a corporate unit. Passages of Vasistha Dharmasūtra speak of the village as a corporate whole and we are told of fines being imposed on them (V. S. Dh. Sū. III. 4).

Villagers had a voice in the management of their own affairs, though by the time of the Jātakas the village headman was no longer an elected official, but a man appointed by the king. This officer, the Gāmani or the Gāma-bhojaka, collected the royal dues and often tried to cheat his master.

Villagers co-operated to dig wells or to construct embankments or to build roads, though communal cultivation had long ceased to exist.

Thus from the Kulāvaka Jātaka we know that the villagers co-operated in raising embankments or digging in wells or raising temples. Similarly, the Losaka Jātaka (41) and Takka Jātaka give us the story of the establishment of a village school and the construction of a hut for the teacher at the instance of the villagers. The Mahā-ummagga Jātaka (546) describes the estab-

lishment of buildings of public utility, by subscriptions raised from the villagers. The raising of subscriptions for works of public utility is further proved by the evidence of many Jātakas and is amply confirmed by the evidence of the Arthaśāstra.

The affairs of the village were transacted by the villagers who met together for this purpose. In case of division of opinion, the voice of the majority prevailed (see Sunila Jātaka 163 and Kāsāva Jātaka 221).

Village elders administered justice in petty cases. The Judicial authority of the village elders remained till the end of the Hindu period.

Lastly, another interesting piece of information from the Jätakas goes to confirm fully the corporate character of the villages, namely, the practice of contracting or raising a joint loan in the interest of the villagers. This is mentioned in the Gahapati Jātaka, where we are told that the villagers contracted a loan (of an old cow) from the Grāma-bhojaka.

CULTIVATION: FREE OWNERSHIP.—There is reason to believe that most of the arable land was cultivated by peasant proprietors (Khettapati, Vatthupati) who were free men. In later Buddhist literature cultivation of land by peasants for princes or capitalists was regarded as a mark of social decay (Jāt. No. 339). As yet there was hardly any stigma attached to the higher castes engaging in agriculture. In the Dharmasūtras we find permission given to poor Brahmins to engage in cultivation or cattle-rearing, though these two were the peculiar occupations of the Vaisyas and Sūdras and

CULTIVATED PLANTS.—As to the cultivated plants, most of those mentioned in connection with Vedic agriculture were cultivated. In the Sūtras of Pāṇini and in other Buddhist and Hindu works we find the

names of most of these enumerated, e.g., Dhānya, Vrihi, Godhuma, Mudga, Māṣa, Yava, Masūra, Kulattha, and other plants. In the East rice remained the staple article of food and so rice was extensively cultivated. There was a large cultivation of sugarcanes, fruit trees, vegetables, and of flowers. Rich people kept gardens of flowers and fruit trees. In addition to these there existed a large cultivation of various aromatic plants, spices, indigo, and fibrous plants, as we shall see very soon. In the next period Indian pepper and spices were exported to the western markets where they were highly prized. Indigo was used for dyeing cloths and garments.

Fibrous Plants.—As to fibrous plants, cotton, (Kārpāsa), Sana (hemp) and linen were largely cultivated during this period. Sana is mentioned in the grammar of Pāṇini. This was largely used in addition to linen, the use of which in the previous period has been explained. As to cotton, its cultivation was probably introduced during the earlier part of this period. As we have said, we find no mention of cotton in Vedic literature. Its earliest mention is found in the Āśvalāyana Srauta Sūtra, and later on in the earliest Buddhist literature and in the Dharmasūtras cotton garments are repeatedly mentioned. Thus, the Mahāvagga mentions Kappasika garments, in addition to Tulika (quilts, stuffed with cotton wool). In the

mentioned in connection with the description of sacrificial dress and of the sacred thread to be worn by men

Dharmasūtras, Kārpāsa is repeatedly

of the three higher castes. There is reason for believing that Kārpāsa was well known in India and was largely cultivated before the sixth century B.C. and cotton garments were largely used. Herodotus who wrote his history in the 5th century B.C. clearly refers to the fact that Indian soldiers in the Persian army wore white cotton cloth. Cotton was indigenous to India and the other nations of antiquity learnt its use from the Indians. This is proved by the way in which Herodotus mentions it. Thus he speaks of "wool growing on trees, more beautiful than that obtained from sheep." (Herod. History.) As has been said already the word Kapas occurring in the old Testament and meaning vegetable cloth (see Esther. 1. 6.) is apparently a Hebrew rendering of the Sanskrit Kārpāsa which the Hebrews borrowed from the Hindus. Similarly, Latin Carbasus is a corruption of the same Sanskrit word. The large cultivation of cotton and its extensive use in India is proved by the Arthaśāstra (4th century B.C.) where we find that by the time of its composition Vanga, Vatsa, Mathurā, Aparanta, Kalinga and Kāsi were great centres of cotton-weaving (Kautilya, p. 81, text, 1st Ed.)

SILK.—Another industry, which grew up during this period, was the culture of silk worm. Garments of silk are mentioned in the Majjhima-sīla, and in Pāṇini the word Kauseya (meaning silken) occurs (P. S. IV. 3. 42). In the Bhikkhu Pātimokkha (on Eḍaka-loma-vagga) we find the word Kosiya-missakam (meaning mixed with silk). All these go to prove that the silk.

industry existed in India before the 6th century B. C. or even earlier. In the Dharmasūtras too we have repeated mentions of silk garments (see Vasistha, Ch. XI, 66).

Whether the silk industry was introduced from China is a disputed question. According to Chinese tradition, one of their queens introduced the cultivation of the mulberry plant in 2240 B. C. Kauitlya who mentions the silk industry in eastern India mentions also Chinese silk (Cina-patta Silk. Cina-bhūmijāh; Kau. P. 81). Recently this question was discussed by M. M. Haraprasāda Sāstri in his article "On the contributions of Bengal to Hindu civilization" published in the Journal of the Behar and Orissa Research Society. To decide whether silk industry was imported from China or it was of local growth is very difficult. most reasonable view would be to hold that apart from imported Chinese silk, the Indians produced silk thread from the cocoon of the various species of the worm which are still found wild in Bengal and Assam. (Vol. V, p. 31; see also supra, pp. 53).

DISTRESS AND SCARCITY.—We have references to distress caused by famines through droughts and floods. In Pāṇini the word Durbhikṣa occurs, and in the early Buddhist literature we find references to occasional famines and distress (see M. I. 220; Vin. I. 211-15).

CHAPTER III

Ι

INDUSTRY

In early times mechanics and craftsmen were attached to the village and earned their living by serving the villagers. This was generally the case in the ordinary agricultural village and in this case industry still retained its rural character. Several sūtras of Pānini refer to craftsmen attached to the village. Thus the Sūtra "Gramah Silpini" (VI. 2. 62), clearly points to the existence of craftsmen attached to the village. Another Sūtra mentions a village carpenter (Grāma-kautābhyām ca Takṣṇa, V. 4. 95). Beyond this the Sūtras do not give us any more information, but if we depend upon the Ganapatha or the commentaries, we find mention of a large number of mechanics and craftsmen, along with servants of lower grade, who ministered to the wants of villagers. This practice continued in many parts of India and exists even in our own days.

SEPARATION OF THE INDUSTRIAL ELEMENT,—In earlier ages this practice was almost universal. But gradually, with the advancement of industry, we find a definite tendency on the part of the artisans to separate themselves and to found organisations of their own. By the middle of this period, industry in most cases definitely passed the rural stage. Artisans and crafts-

men found it convenient for them to free themselves from the village tutelage. Dependence on the village made them entirely their servants and compelled them to subsist on the occasional doles and remunerations according to the whim of the villagers. A better organisation, on the other hand, enabled them to find out better opportunities for their crafts. They could work more, produce more, and send the products of their labour to other markets than the village.

The growth of towns and town life, the development of commerce, internal and foreign, the greater demand for manufactured articles, all these contributed to the growth and the volume of the industry. The industrial population became separated from the agricultural villagers and became settled in towns or in villages which became centres of industrial life. They organised guilds and further developed their corporations which aimed at securing better oportunities Growth of Industry for the realisation of their ideals. Almost all the industries were organised into guilds. Craftsmen too had similar organisations. The establishment of these guilds contributed to the development of industry and the prosperity of the industrial population. The chief industries were the following,-

II

THE WEAVING INDUSTRY

1. Weaving included weaving of cotton and silken cloth, embroidery and the manufacture of blankets.

The weaving industry attained a very high development. In addition to wool and linen mentioned in the Vedic period, cotton and silk fibres were largely used in the manufacture of cloths and garments. In the earliest Buddhist literature of this period we find weavers being employed to weave cloths for monks. (Civara: see the Pātimokka) we also hear of garments of wool. These seem to have been very cheap. In the Bhikkuni pātimokkha four, and two and a half Karsas are set down respectively as the price of big and small covering pieces for nuns. We also find mention of Kāppāsika garments (of cotton) and of Koseyam (silken garments). In the Majjhima Sīla we have a list of various kinds of cloth and blankets, e.g., Gonako (goat's hair coverlets) Cittika, Patika (white blankets) Patalika, Tulika (quilts stuffed with cotton), Vikatika (with figures of lions, etc.) Uddalomi (with fur on both sides), Ekantalomi (with fur on one side), Koseyyam (silken), Kuttakam (carpets). As to the weaving industry, we know further from the evidence of the Therigatha that the fine silk and muslin cloth of Benares was highly prized in those days. Cotton was cultivated in large fields near Benares (see Tundila Jataka, 388). The Jatakas, too, speak highly of the cotton textile of Benares (Mayhaka-Jātaka, 390). According to some Jatakas the price of cotton cloth ranged up to 1,000 pence (see Guna Jā. 157; Therīgāthā, Chap. XIV). According to the Vinaya Pitaka, the cotton cloth of the Sibi country was of a high quality (M. V., VIII. 1). We also hear of rugs for elephants and horses.

III

THE SMITH AND MANUFACTURE OF METALS

2. The smith's industry.—As to the smiths' (workers in metals) industry, Kammāra is mentioned in the earliest Buddhist literature. He was, according to Mrs. Rhys Davids, a general craftsman in metals, and manufactured various implements of iron, e.g., weapons, ploughshares, axes, saws, knives, etc., and also implements and utensils for household purposes (J. R. A. S. 1901, p. 864) and even made ornaments of gold and silver.

In addition to the metals already known or used, we find the use of various alloys. Of these alloys, Kamsa is mentioned in Pāṇini (IV. 3. 168; V. 1. 25) and in the earliest Buddhist literature. It was used for making utensils and other household implements.

Jewellers and workers in precious metals also existed. They made gold and silver ornaments and produced works of high value which were prized by women of rich families. Precious stones, gems and pearls were largely used for the making of ornaments. The Jātakā evidence throws some more light on the art of the smith. Thus the Sūci Jātaka (387) mentions a smith manufacturing five needles. The Kusa Jātaka mentions a smith making gold images. The swords of Dasārņa were famous for their high temper and fine edge.

CARPENTRY

- Carpentry.-In addition to the ordinary carpenters who were employed in making household furniture or other wooden articles, there were skilled workmen employed in building carts and chariots and in building boats. As to the building of wooden ships we have some reference even in the Anguttara Nikāya which is found also in the Samuddavānija Jātaka (466). Houses were often built of wood and in these the skilled workmen were called upon to show their skilled merit. The Anilacitta Jātaka (156) mentions a guild of weavers who lived near Benares, and there collecting timber from the forest, made household furniture and even house parts, posts, etc., which were afterwards joined together. As to household furniture for rich men we hear of the Pallanko and Asandi. The connection of the carpenter (Vaddakī; Mahā-Vaddhakī) with the Thapati is not known.
- 4. Pottery—The potter is repeatedly mentioned in the Buddhist literature. Pottery work and designs attained high development.

In addition to these, we hear of workers in stone (Rhys D., p. 90) whose work attained high development during this period and who designed and built houses, carved pillars, and produced work of high value (Bud. Ind., p. 90), shoe-makers making ordinary shoes or

embroidered slippers, men employed in making ornaments and jewellery, ivory workers, makers of bows and arrows, stone-masons (Pāsāṇa koṭṭaka), men engaged in distilling wine of preparation of sweetmeats etc.

The Jātakas throw some more light, and give us details showing the multiplication of crafts. Thus in connection with workers on stone, we hear of the Pāsāna-kuttaka.

New crafts arise. Some Jātakas point to mechanics setting and using marble slabs. (Nos.

153 and 157). Brick-masons were known as Itthakavaddhaki. The stone-mason often produced works of superior skill. *Ivory-workers produced various articles, ornaments and toys. One of the centres of ivory-work was at Benares [See Sīlavannāga (72) and Kāsāva (221) Jātakas]. This industry was located in a particular portion of the city which was known as workers' street (Danta-kāra-vīthī)—(Sīlavannāga-Jātaka No. 72). With the growth of the crafts there was a division of labour. Thus the Jataka evidence shows that in those days, bow and arrow-making which employed a large number of mechanics, involved three different operations and employed three sets of people. The évidence of some Jātakas show the making of bows from the horn of animals, owing to its flexibility (See Asadisa Jāt. 181 and Sarabhañga Jāt. 522).

Wine-distilling, too, was the occupation of a large number of men—since the drinking of wine was common in those days. Various classes of liquors, e.g., Surā, Meraya, Vāruṇi, Kāpotikā and other varieties were used by the people in all festive occasions. Of other

people, not directly concerned with industry proper, may be mentioned painters—who excelled in their art [See Mahāummagga Jātaka (546) and Sudhābhojana Jātaka (535)]. Cooks, confectioners, potters, and dyers existed and carried on brisk business.

The rise of these industries, was, as we have said, followed by their localisation in particular places, favourable for their growth and gave rise to industrial villages. We have innumerable references movements of the population in the Jatakas. Thus in one Jātaka we are told of a village of smiths. Another tells us of a village of carpenters (Mahāvaddhakigāma). Similar organisations were also common among other sections of the population.

GUILDS

The necessity for interdependence among craftsmen gave rise to something more than a mere localisation. Men of the same trade or occupation not only congregated in the same localities, but bound themselves to each other by the formation Importance of guilds. corporate organisations, known guilds, which are found in almost all countries and in all ages. The guild was not only a union of men, but in it there was a harmonious association between labour and capital. In India the movement towards guildorganisation originally began towards the close of the Vedic period proper, but it was during this period that

the guilds came to play an important part in various aspects of social life.

As to the rise of guilds which are closely associated with the growth of industry, we find their earliest mention in this period, in the Sūtras of Pāṇini. There, we find four words, e.g., Gaṇa, Pūga, Vrāta, and Saṅgha (V. 3.) In addition, Pāṇini mentions Āyudha-jīvi-saṅghas and speaks of the Yaudheyas. In early Pali literature too, we find the words Saṅgha, Pūga, Seni and Gaṇa (see Bhikkhunipātimokkha, Ch. 2.). But unfortunately for us, we have no detailed information about these unions, which may be of real help to us to find out the exact nature of these organisations.

As to the word Gaṇa, it is difficult to find out its meaning in the earliest Buddhist literature. It probably meant any corporation or union of individuals for religious or any other purposes (see Bhikkhuṇi-pātimokkha; Bhojana-vagga). Gaṇa is often used in the sense of a religious body of men of high position. According to the Kankhāvitaranī, Gaṇa was a body of words denoting guilds.

Men of high position; Pūga was a religious body (Dhammagaṇam) while Seni was a corporated union of merchants. Again, the use of the word Gaṇa in the sense of religious body is continued in later works in the same sense. Thus in the

there was any Samana-Brāhmana—head of Sangha (Sanghī) leader of Gana (Ganī) or Gana-teacher (Ganācāriya) who could dispel his doubts. In reply he was told by the 500 princes that there were

the great six, e.g., Pūrana Kassapa, Makkhalī Gosāla, Nigantha Nātaputta, Sañjaya Vellatthiputta, Ajita Kesakambali, and Pakudha Kaccāyana. They were all heads of Saṅghas (Saṅghino), leaders of Gaṇas (Gaṇino), teachers of Gaṇa (Gaṇācāriya). The Milinda also speaks of various Gaṇas or Hindu religious sects, e.g., worshippers of Vāsudeva, and the dancers (the Naccakas, p. 191. Trenckner). It is curious to note however that the word Gaṇa is only once used in the sense of corporation in the Arthaśāstra, and in the Mahābhārata, it is used in the sense of a political corporation. From the evidence of later literature, and of inscriptions we know that some of these Gaṇas were powerful corporations of traders or merchants.

As to the word Sangha, it is used in the sense of a religious corporation in early Buddhist and Jain literatures. In the sense of a political corporation it is used in the Arthaśāstra where we find the mention of commercial and co-operative Sanghas too. (Arthaśāstra pp. 48 and 185). The word is used in the Mahābhārata in the sense of a political confederation. The Yādava confederation is called a Sangha-and Srī-Kṛṣṇa is called a Sanghamukhya.

Of these four words, two, viz., Gana and Sangha were thus used to denote any corporation, e.g., unions for political or other purposes. But from evidence which we have at our disposal we know that the words Pūga and Sreni (Seni) were generally used to denote corporations of merchants, artisans of work-people or other unions whose main object was to gain wealth by trade

or industry. Some of the Srenis however became powerful corporations and came to have troops of their own. This is proved by the evidence of the Mahābhārata and the Arthasāstra (see Āsramavāsika, Ch. 7; also Arthasāstra, p. 341).

THE IMPORTANCE OF THE GUILDS:-From the evidence at our disposal, it would appear that the age was one of great corporate activity. Alike in politics as in social and in economic life we find the influence of corporate organisations. The causes which led to the formation of these bodies are not far to see. First of all, there was the need for protection against the tyranny of princes and other powerful in lividuals; then, there was the desire for the attainment of proper opportunities for the realisation of Power of the guilds. the aims of life. These led to the formation of these bodies which became powerful enough to ensure their own protection and to check the high-handedness of men in power. Their power was felt and Kautilya in the 4th century B. C. refers to the danger of provoking these bodies and says that corporations (lit. men banded in leagues or unions-Sreni-manusyāh) are intolerant of calamities (oppression?) and are perverse (viparītāḥ) and it is dangerous to provoke their anger (kope mahā dosah).

From the early Buddhist books and the Dharmasūtras it would appear that the chief industries were all organised in guilds (see Rhys Davids, Bud. Ind. p. 90; J. R. A. S. 1901, p. 865) and the word which is generally used to denote these guilds is Sreni (Seni)

and Pūga. Very little is known however as regards their constitution or internal organisation from the earliest books. Only stray informations are furnished. Thus, according to the Vinaya Pitaka, the guild was entitled to arbitrate on certain occasions, in disputes between its members and their wives (Vin. IV. 226). In the Anguttara Nikāya we find the word Pūgagāmanika, which means the head of a guild (Gāmanīleader). Of the Dharmasūtras, that of Gautama refers to the validity of laws and customs established by the guilds of cultivators, traders, usurers, herdsmen, artisans, and craftsmen (Karavah-Gau. XI. 20. 21). Vasistha speaking of the validity of Jatidharma probably refers to the customs of these guilds (Vas. 17. XIX. 7.) It is probable that in the days of Vasistha, the guilds were corporate bodies whose existence and whose customs and privileges were recognised by the

kings of those days. According to the guilds cocupied a high place in the royal tribunals. The Arthaśāstra, too, which was composed in the 4th century B. C. gives us valuable informations as to the constitution and working of these guilds. From the evidence of all these works it would appear that there were guilds (Sangha, Srenī, Nikāya) of artisans, craftsmen and work-people. We hear of guilds of weavers, of washermen, of goldsmith, of brasiers, medical practitioners and of labourers.

As to the constitution and organisation of these bodies, we get more information from the Jatakas, which

seem to have preserved old traditions relating to these. In these we find repeated mention of the 18 guilds, which are designated by the word Senī (Seniyo) and from these we know further that each of these guilds had a chief (Jeṭṭhaka or Pamukha), though we have nothing which enables us to find out the distinctions between the functions of a Jeṭṭhaka and those of a Pamukha. The word Jeṭṭhaka may be rendered into English by the word Elder or Chief. We hear of a Kammāra-Jeṭṭhaka (387. Suci. Jāt.) Mālākāra-Jeṭṭhaka (Kulmasa. Jāt. 415). Vaḍḍhaki-Jeṭṭhaka (see Samdda-vāṇia-Jāt. 466), and Satthavāha-

vāṇija-Jāt. 466) and Satthavāhaor Jeṭṭhaka (Jaruda-pāna No. 256). We hear even of thieves, and of caravan-

guards having their guilds ruled by Jetthakas. Thus in Satapatta Jāt. (279) we find mention of a Jetthaka who, being the leader of 500 thieves and outlaws, exercised a great authority over its members.

These guild-heads were often great favourites of the Position of elders. kings and in the Uraga Jātaka (154) we find two guild leaders, as being included among the Kosala mahāmātrās. In the Sūcī Jāt., the leader of the blacksmiths is described as a Rājavallabha of those days. They were the exponents of class interests and often represented the interest of the guilds before the king. In one of the Jātakas (No. 445) we find one of these headmen appointed as a lord of the royal treasury. Men of the guild often assembled to settle disputes. The guild had the power of arbitration in cases of dispute between members and their

wives. Guilds could take apprentices who were often rewarded for their intelligence and merit. According to Rhys Davids, disputes between one guild and another, Seni-bhandana (see Uraga Jāt., 154) were in the jurisdiction of the Mahāseṭṭhi or the Lord High Treasurer, who acted as a sort of chief Alderman over the guilds (Rhys Davids, Bud. India., p. 97).

VI

LOCALISATION OF INDUSTRY AND INFLUENCE ON TOWN-LIFE

Trades and industries were thus localised either in separate villages or in particular portions or suburbs of the towns. In early literature we have very scanty information as regards this, but we may infer that this of industry was completed with the localisation establishment of the guild. In previous chapters we have many times referred to the caste and craft villages. In certain cases when a village consisted mainly of the craftsmen of a localised Influence on towns. industry, the office and functions of a guild leader and a village-headman were vested in the same person (see Jat. No. 387, which speaks of the head of the village of 1000 smiths being a favourite of the king of Benares).

The influence of the rise of the guilds on the city, was immense. Thus, the city became an agglomeration of several quarters, each designated by the name of the prevailing industry in that quarter. We have

referred to this in some previous section. Thus we have mention of "an ivory-workers' street," "the smiths' quarter," "the weavers' quarter" "the Vaisya quarter," etc. This gives us a picture similar to that of mediaeval European towns. Even now in many Indian cities we find practically the same state of affairs. Unfortunately for us, the material at our disposal is so scanty that we are not in a position to give a picture of the city arrangements in those days. In the Arthaśāstra we have more precise information on this head.

In all important matters, the guild interest came to be consulted. Their customs were recognized and the guild-heads sat as assessors in judicial cases, and their opinion was freely taken by kings. They fixed their own profits or wages. Beyond this our information does not go and we know not whether the guilds influenced the economic condition of the city any further, by their privilege of controlling the supply and price of articles. Probably these never came to be regulated by the guilds. Similarly, we do not know the conditions of entrance into guilds or other interesting details.

CHAPTER IV

T

TRADE AND COMMERCE

In this period there was a great development of commerce, both internal and external. Foreign trade developed. One of the Sūtras of Pāṇini refers to trading with islands (cp. Dvaipyo vaṇik IV. 3. 10). From other Sūtras we know of merchants trading with certain parts of the country (VI. 1. 13).

In the earliest literature of the Buddhists and Jains, we meet with the word Vanijo meaning merchants in general. Some of these merchants traded with foreign countries and carried their goods in their own vessels (Samudda-vānijo). The Nikāyas, too, speak of seavoyages to distant foreign lands but details are lacking until we come to the period during which the Jātakas and other later books were composed. As to circumstantial evidence, there are supposed references to Indian goods in foreign literature which go to confirm the existence of a commercial intercourse with the people of Western Asia. Thus, in Homer we find the word Kassiteros meaning tin, and this is an exact echo of the Sanskrit equivalent for tin (Kastira). In the book of Kings (see 1 Kings X. 11-22; Old Testament) we have references to goods brought from Ophir by the ships of Solomon. Of these, the equivalents for three

things, e.g., Tukheim for peacock, Kof for monkey, and Shenhabhim for ivory are distinctly non-Hebrew and bear a close resemblance to Sanskrit and Malayalam words (e.g., Tukkim—Tamil, Tokie or Skt. Sikhī; Kof—Skt.—Kapi; habbim—Skt. ivha) denoting these three things (see Max Müller, Science of Language, Vol.

II., pp. 186 and 188; also Grammar Philological evidence. of Dravidian Languages by Caldwell, p. 91). This led to the identification of Ophir of the Bible, with Supārā or with Abiria on the west coast of India. Again, Dr. Bühler's discovery that a large number of letters of the Indian alphabets (Brahmi) bear a close resemblance to certain letters on Assyrian weights and the presence of some of those on the Mesha inscriptions of the VIIth and IXth century B.C., presupposes an extensive commercial intercourse existing between India and the regions about the Semitic lands in the neighbourhood of Sumeria and Syria. Mr. Kennedy in his article published in J.R.A.S., 1898 has proved the existence of an extensive commerce between India and those portions of Western Asia about the VIIth century B.C., though according to him, archaeological or literary evidence no there is a trade with India previous to the VIIth The evidence of some of B.C. century Dharmasūtras goes to prove that sea-voyage was not unknown among the Indian Aryans. Thus Bodhāyana (see Ch. I) in enumerating the condemned practices of the north, speaks of the existence of the custom of making sea-voyages among the northern Brahmins. As

to the evidence of the Jatakas, one of these stories speaks of a voyage to Baveru (Babylon), another (the Valāhassa) describes a voyage to Tambapanni (Ceylon). These have already been mentioned. (See J.R.A.S., 1898; also Bud. Ind., pp. 115-16). Another Jätaka (the Mahājanaka) refers to the voyages of merchants to the land known as Suvannabhūmi, and now identified with portions of the Indo-Jātaka evidence. Chinese peninsula. The Losaka (41), the Sīlānisamsa (190), the Valāhaasa Jāt. (196), the Dhammaddvaja (384), the Catudvara (439), the Suppāraka (463), the Samuddavāņija (466), the Paņdara (518) and many other Jātakas, give us too vivid descriptions of the difficulties of sea-voyages, or the distress of mariners, on the ocean, to be regarded as mere fabrication.

From the Jātaka evidence we may come to the conclusion that the vessels were of fairly considerable size. One Jātaka indeed, the Samuddavāṇijo refers, to the voyage of 1,000 carpenters, all in one vessel, but this may be taken to be an exaggeration. The vessels were of three masts (Kūpaka; see Sīlānisamsa Jāt. 190) and carried sails and anchor (lankāra), riggings (yottāni) and other contrivances.

The ports of departure were many. The Losaka Jātaka (41) speaks of the port of Gambhīra (Gambhīrā

¹ The Sankha Jätaka speaks of a vessel 800 cubits long. The Mahaunmagga speaks of 300 wrights building ships. The dimensions given above are evidently exaggerated.

pattana). Bharukaccha, Roruka, Suppāraka, Kavirapattana were the other ports of departure of vessels. Some of the merchants indeed carried on a coasting trade, while others journeyed across the ocean. sea, vessels were under the command of Nivamakas, and were guided by skilled mariners, who noted the position at sea by marking the position of planets, and stars (Vannu-patha). The compass was unknown, and consequently it was difficult to find the direction in which the vessel was steering. In times of danger, when there was no sign of land, crows were let loose (see Baveru and Dhammadhvaja, 339 and 384). Marines were often ship-wrecked and cast on unknown islands. Occasionally vessels suffered from submerged rocks or marine volcanoes. The Jātakas tell us practically nothing about the principal commodities. Probably the exports consisted of Indian cotton (as we know from the word Sinthus in Assyrian, standing for cotton goods), birds—(e.g., peacocks; see Baveru Jat.) ivory and other raw produce of the country.

II

INTERNAL TRADE

The commerce of those days may be considered under three separate heads:—

- (1) Trade between distant country parts.
- (2) Trade within local areas.
- (3) Retail trade in cities and in villages.

I. Trade between distant country parts was in the hands of adventurous merchants, who led great caravans from one part of the country to another. Most of these caravans, followed the great trunk roads, while some merchants used river-traffic in exporting their goods. The goods carried included the best metal-wares and weapons of Dasārna, the fine muslin of Benares and the ivory works and ornaments of the East. Many specialised in the trade of one commodity. Thus some merchants traded in spices, others as we find from Panini, carried salt from one part to other. Merchants from the banks of the Indus brought horses to other cities.

The caravans consisted of bullock-carts, laden with goods attended by the owners, and were guarded by their followers. We have repeated mention of caravans consisting of 500 and even of 1,000 bullocks. Merchants travelled long distances to reach their destinations. In one Jātaka, we find a merchant travelling from Srāvasti to Rājagrha. Another mentions ivorymerchants of Benares moving to Ujjain (see Guttila, 243). The Gandhāra Jātaka refers to the journey of caravans from Videha to Gandhāra, a distance of more than 1,200 miles.

Caravan Merchants:—Most of these Indian merchants who moved with their goods in great caravans from one part of the country to another, elected one of their members as their leader and this man was called the Satthavāha or caravan-leader. The Jātakas describe

the difficulties of these caravan-merchants. Robbers often looted the caravans. The Satti-Organisation. guima Jat. refers to the village of 500 robbers whose profession was to loot caravans. Moreover, according to the testimony of these books, these merchants combined for the purpose of a long journey, had their own caravan-guards for the protection of their lives and goods and these were paid by the caravan as a whole. These caravan-guards are repeatedly mentioned in Jātakas. Occasionally we find Brahmins acting as caravan-guards. (See Dasabrāhmana Jāt. 495). In deserts or in unknown places the land-pilots consulted the stars. During the heat of summer, merchants rested during the day and proceeded with their journey at night. Occasionally they (see Jat. 84) had to cross deserts or dense forests. The trade-routes which were used by these caravans have already been described.

Other merchants carried their goods on board vessels, and this use of water-traffic for purposes of trade is proved by the Jātaka evidence. Thus from the Cullasetthi Jātaka, we know of a merchant who took a vessel to Benares, while the Mahājanaka Jātaka suggests that in those days the Ganges was navigable, by river crafts of considerable size, and merchants from big cities on her bank came down right up to the sea.

The halting places of these caravans seem to have been marts of exchange, where many of the merchants sold or exchanged their goods. From these towns these goods were redistributed to the inland regions and probably the cities were also the centres to which local products were carried for sale and exchange.

II. Distribution of local produce: For the distribution of local produce, these were sent either to the great cities or to the Nigamas or the market towns.¹ These seem to have been frequented not only by the small dealers but also by wholesale purchasers, who purchased in those markets. The price of articles was settled as a result of haggling (see Bāveru Jāt.) between the parties and it seems to have varied according to demand and supply. We have instances of wholesale purchases, though the information on the head is rather meagre.

III. For local sale both retail and wholesale, there existed shops (Āpaṇas) in the cities. These shops were mostly owned by single merchants.

Of merchants some specialised in the trade of single commodities. Of such Pāṇini refers to salt-merchants, and spice-merchants. (Lāvaṇika, Salāluka; IV. IV 51 to 54.) In addition to these, there were retail shop-keepers, who had their shops (Āpaṇa) in villages or towns and sold various articles of every day use, and also retail traders and hawkers who moved with their goods on carts or donkeys (see J.R.A.S., 1901,

¹ It is difficult to find out the exact meaning of the word Nigama. Mrs. Rhys Davids (J.R.A.S., 1901), denies the existence of markets or of market-towns. According to her "no clear references to market places in towns or market-towns or to markets as periodical or permanent are found; nor any word equivalent to market is as yet forthcoming." Also "there is no mention in the Jātakas of any rural institution resembling the still surviving barter-fair or haut."

p. 873). As to the shops (Āpaṇa, Paṇyāgāra), we hear of some for the sale of the textile fabrics, groceries, and sellers of flowers, grains, and other articles. Hotels and taverns too existed. (see Vin. II. 267; IV. 248 and 249). Slaughterhouses, ale-houses, and hotels for the sale of cooked meat and rice existed. As regards these last, we have repeated mention in the Arthaśāstra and some early Buddhist works (see Arthaśāstra, Book II, and Vinaya. I. 20, II. 267. D. 22). The Arthaśāstra mention slaughter-houses for the sale of meat, drinking-houses, ale-houses, hotels, shops for the sale of cooked rice, meat, and other kinds of food. (Note the words Paṇyāgāra Audanika, Pākkamāṃsika).

Sellers of vegetables and other minor commodities brought their goods and halted at the city-gate and hawked thence for sale. So also bunters and fishermen brought meat and fish from outside to the markets in the town or carried from door to door.

No REGULATION OF PRICES.—As yet, however, there is nothing to prove a regulation of prices as we find in the Arthaśāstra or in the later Smrtis. According to the Jātaka evidence, purchases on behalf of the king were made by a royal officer, and the price of these

was settled by a man named "Agghakāraka" or the court-valuer. Whether this was the germ of the later system of price-regulations by the king we do not know. As a matter of fact, we have no mention of such interferences by royal officials, neither in the Dharma-

sūtras nor in the Jātakas, nor in the older Buddhist records.i

LEVY OF DUTY.—This valuer or Agghakāraka, according to the Jātakas, also assessed the toll on articles, e.g., of a twelfth on local produce and a tenth on imports from abroad. The toll was collected by the Valipragrāhakas and other minor officials. On wines, a duty was levied and this was often collected by the village headmen.

Business Organisation.—Apart from the business or commercial dealings conducted by single individuals, we find some information as to existence of joint undertakings. Men often joined each other, till the completion of their journey. Thus from the Jātakas we learn that caravan merchants or sea-traders united for this purpose. Several Jātakas, e.g., the Cullasetthi Jātaka (No. 4), the Kūṭāvāṇija, (No. 203), the Serivāṇija, Mahājanaka Jāt. (No. 539), Mahāvāṇija (439) and the Jarudapāna Jat. (No. 256), all seem to testify to the tendency of merchants to unite together for specified commercial undertakings.

Thus the Cullasetthi Jāt. (No. 4), describes the joint purchases made by 100 Benares merchants from a young man who had purchased the contents of the ship by depositing his ring. The Kūṭavāṇija Jātaka describes the union of two merchants from Benares, who had taken five hundred waggons of merchandise with each. At the end of the transaction we find one of them claiming a double share, which however was disallowed by the

other party. Similarly the Suhanu Jātaka speaks of horse-dealers of north, who carried on their transactions jointly. Likewise the Serivāṇija Jātaka (No. 3) gives us the story of two hawkers carrying on business jointly and dividing the profits between them. The Mahāvaṇija, too, gives us the same information, e.g., of merchants joining together and going out in search of treasures under an elected leader. The Mahājanaka Jātaka speaks of similar agreements among sea-traders. The Jarudapāna (256) gives us some more information and tells us that not only did the merchants proceed jointly, but divide a treasure-trove among them, showing the nature of the union.

But here one important question comes up for discussion. With the scanty information at our disposal we cannot as yet make ourselves sure, as to whether these joint undertakings were of a permanent nature, or

No joint stock companies.

there were temporary unions which ended with the end of the undertaking. As yet the evidence at our disposal

points to the possibility of these being of the latter type. This appears to us from the instances of Sambhūya Samutthānam in the Arthaśāstra where all such undertakings are mostly of a temporary nature.

Probably, real and permanent business organisations or joint-stock companies, which we find in the later Smrti works, as yet did not arise. But anyhow these may be regarded as the forerunners of later partnership organisations and of joint-stock companies. The great development of trade led to their legal recognition in later periods.

Tempo

CHAPTER V

OCCUPATIONS

The rise of the industries, as also the development of trade diverted a large number of men to these new means of livelihood. Agriculture, though it remained the occupation of the mass of the population, lost its main attraction, and men began to crowd in cities, attracted by the luxury and finery of city life, by the chances of getting employment, and by other facilities. The landless found a greater opportunity in the cities where they obtained employment Rise of sub-sections. easily. Labourers and artisans too organised themselves, and with the advancement of complexities or the requirements of division of duties were sub-divided into sub-groups. Diversity of occupation too had an influence on the social organisation, as we shall explain later on.

As to the various occupations, in addition to those mentioned in connection with the different branches of industry there were men of other occupations—men not connected with agriculture or any of the important branches of industry, but whose services were important to the community. The greater number of these had come into existence towards the close of the Vedic period. Subsequently more new occupations arose. Most of these had their own guilds and their own

regulations. The following is a list of the professions and intellectual and cultured occupations:—

- I. 1. The Physicians, Surgeons, Child Doctors: (Vejja, Komāravacca). These men were often highly paid. Thus, Jivaka obtained a fee of sixteen thousand pieces for curing a Setthi's wife (Vin. 1. 272).
- 2. Astrologers—soothsayers, omen-readers, magicians, performers of spells, etc.:—As in the Vedic period these were mostly Brahmins. The Brahmajāla Sutta describes Buddha's violent attack on those people, since they preyed on the ignorance of the ordinary people.
- 3. Various orders of Brahmin Priests whose business, earnings, and luxury, Buddha condemned.
- 4 & 5. Clerks and Accountants.—Lekhaka and Ganaka. Very little is known of these.
- 6. Teachers:—These were highly paid by rich pupils, who on completion of their studies used to pay big fees—often 1000 kahāpaṇas. In the various centres of learning which existed in those days these teachers had their independent establishments. Students from all parts of the country flocked to them. According to the tradition in the Jātakas, Taxila and Benares were the great educational centres of those days. The people of Benares maintained poor students (Punna-sisya).
- II. Next to these intellectuals, there were others, who, not connected with productive industries, earned their living by amusing rich people or ministering to their habits of luxury. As before, we hear of men engaged in dancing and singing, musicians, clappers,

acrobats, actors in theatres, courtesans, professional boxers, wrestlers, story-tellers, etc. The word Nata meaning an actor occurs even in Panini (IV. 3. 110-129).

III. Lastly, there were those who engaged in various menial occupations. Of these we have as before the barbers, cooks, washermen, bath-servants (Snāpaka, nahāpaka), shampooers (samvahaka), various grades of army folk, grooms, elephant-keepers, garden-keepers, charioteers, carters, caravan-guards, day-labourers, sailors, hunters, fishermen, butchers and slaves (D. 1. 51; Bud. Ind., p. 88).

Courtesans lived in cities and exacted big fees from their visitors. Some of them like Ambapāli were rich and, far from being despised, held a high position in society. Princes and nobles all vied with each other in paying court to them and honouring them. Ambapāli and Sālabati were the pride of cities. In the Arthasastra we find regulations to control them and an officer was appointed who was in charge of the courtesans of the city. Keepers of gambling-houses too existed, and these were frequented by all grades of people. During the period described by the Jatakas, there was hardly any state control over these. In the next period we find an officer appointed by the state to control these houses. Keepers of slaughter-houses, and ale-housekeepers had a place within the city and plied a brisk trade. Hotels and hotel-keepers too existed, but information is rather meagre,

Occupation was mainly hereditary, though it could often be changed. From the Jātakas which give us a realistic picture of society we get innumerable instances of such changes in hereditary occupation. But the tendency to follow one's father's occupation is natural and is found even now in our present-day society freed from the shackles of old-world conservatism. In the Jātakas, we find this tendency amply influencing the ordinary people. Individuals and families are constantly referred to and described in terms of their traditional calling or those of their Occupation generally hereditary. parents. Thus we find numerous references to families of merchants (Setthikula; see Phala Jāt. 54). One Jātaka (Visavanta, 69) speaks of a family of Visavaidyas (those who treated cases of snake-biting?). Another refers to a family of Pannikas (growers of vegetable.-Jat. No. 70). The Babbu Jat. (No. 137) speaks of a family of stone-masons (Pāsāna-kuttaka). Similarly we get mention of families of weavers, potters (Jat. No. 178 in addition to those referred to), families of actors (Nata Jāt. 212) of forest-guards (Jāt. No. 265), etc.

Low-caste people (Hīna-Jācco; vasalas) like Candālas, Nesādas, Veṇa, Rathakāra, Pukkusa, naturally followed the occupation of their family. They had no place in society, and they were looked down upon by men of the higher castes, who would not think of taking to their ignoble professions. Lower craftsmen (Hīna-sippāni) too followed their profession. Thus barbers, weavers, basket-makers, potters, and

tanners adhered to their hereditary means of livelihood. The Vaisyas, or the Ambatthas who are hardly mentioned as such in the Jātakas, found it profitable to continue their own hereditary calling of trade, banking or agriculture (Jāt. 495).

In the case of Brahmins and Ksatriyas, the majority followed the hereditary intellectual or military callings. Some of the Brahmins distinguished them by their profficiency in the sacred lore, and got help from their students or from kings, or occasionally from localities. Others turned astrologers, soothsayers, omen-readers. Some became priest or chaplain to the king, and trained their children in their occupation. The generality of well-to-do Kşatriyas, trained their sons in the profession of arms, or entered the service of the king. Those Change of Occupation. . however who could not earn a livelihood from these, took to the occupations of the Vaisyas and Sūdras. From the evidence of the Dharmasutras, it would appear that men of higher castes often engaged in the occupation of lower castes. Thus the Sūtras prescribe agriculture, cattlerearing or trade (except in some commodities) for Brahmins and Ksatriyas. The evidence of Buddhists books especially that of the Jatakas, which give us a realistic picture of the society of those days, proves the same (Rhys David's Buddhist India, Ch. IV, on social grades, p. 54). Thus in the Sarabhanga Jat. (522), we find the son of the Purohita training (58) as an archer and soldier. The Dasa-Brahmana Jataka (495) speaks of Brahmins being engaged as caravanguards or in still lower occupations (see also 155 and 222). Some degraded Brahmins even turned robbers (Mahākanha Jāt. 469). One becomes a hunter (Cullanandika. 222). We find Brahmins engaged in agriculture (Jāt. 211 and 354) and tilling the land with their own hand, while others reared goats and sheep (413 and 495). One Brahmin seems to have become a carpenter (Jāt. 475).

In the case of Kṣatriyas too we find similar deviations from hereditary occupation. Some seem to have engaged in Vedic studies and Kṣatriya Mahāsālas are mentioned. Moreover, there are instances of princes turning traders, glorists or cooks or potters.

Generally however trades and crafts were largely hereditary and traders and craftsmen in general trained their own sons and relatives in their own business. In addition to paid servants to assist them, they kept these affiliated apprentices. From the Jātakas we know something of the apprentices (Ante-vāsika). The Ante-

vāsika was affiliated to the master who was the Ācārya, after the example of the Vedic teachers. During the period of training, the Ante-vāsika, like the Brahmacāries had to reside in his master's house and to perform all the duties entrusted to him. He received his food and clothing in lieu of services rendered by him.

The Vāruni Jātaka mentions an apprentice to a wine-merchant who was a friend of Anāthapinḍada. During the absence of the master (Ācāriya) the work of selling wine was entrusted to him. The Kusa Jātaka

(531) tells us of an Ikṣāku prince, who became himself an apprentice successively to a potter, a garland-maker, and a cook, of the Madra king in order to get an opportunity of coming in communication with Princess Prabhāvatī.

Excepting this, other details about the apprentices is rather meagre. In the case of apprentices of intelligence and merit they were rewarded by their master. Thus the Kusa Jātaka, refers to this practice of rewarding of apprentices, and we hear of their getting 1000 Kahāpaṇas (see Kusa Jāt. No. 531).

CHAPTER VI

Ι

MONEY AND MEDIUM OF EXCHANGE

In this period, there was a larger circulation of gold, silver and coper pieces as medium of exchange. Not only do we meet with the old names of Niska, Satamāna, but we find evidence of the rise of a new and varied currency. Of the older types of currency, the Satamāna and Niska are referred to in many places of the Upaniṣads and the śūtras. The Chāndogya Upaniṣad contains references to a Niṣka necklace which is conferred by king Jānaśruti Pautrāyana to Raikka (IV. 2.). Kātyāyana's Srautaśūtra refers to the Satamāna (XV. 181 and 182).

The circulation of the Niṣkas and Satamānas continued, but a newer currency system came into use, with the beginning of the period. The earliest information on his head is furnished by the Sūtras of Pāṇini who as we have shown flourished in the 7th Cen. B. C. Pāṇini mentions the words Kaṃsa (V. 1. 25 Kāṃsāṭṭiṭhan) Satamāna (V. 1. 27—Satāmāna viṃśatika-sahasra-vasanādan) Kāṛṣāpaṇa (V. 1. 29.—Bibhāṣākāṛṣāpaṇa sahasrābhyāṃ) Paṇa, Pāda, Niṣka (V. 1. 34 and V. 2. 119; and V. 1. 30). We also hear of the Vista (V. 1. 31.—Vistācca—Suvarṇatolaka) for the purchase of goods. In V. 2. 65 and VI. 2. 55 the word Hiraṇya is mentioned but the meaning is not

clear (in V. 1. 55 Dhanahiranyāt kāme). That, all of these were coins, some of silver and gold, others of copper or base-metal we have no doubt, as is proved by the evidence of later works. In the case of Vista however we have some difficulty since we hardly find the use of the Vista or Suvarna-tolaka in later literature. Moreover the evidence of Pānini is really significant and proves, in clear and unmistakable terms, the practice of stamping impressions on coins. The Sūtra in question is V. 2. 120 (Rŭpādāhata prasamsayoryap) where we get the rule for the addition of the yap suffix on the word Rūpa to designate both a coin-piece bearing impressions, and also to signify a man of fine appearance. Ahata has been explained by the Kāśikā commentary, as bearing impression by stamping "Nighātinatādanādinā, Dinārādisu rūpam yadutpadyate tadāhatamucyate (see Kāśikā on V. 2. 120). These stamped coins known as Rupyas or as they are called in prakrt dialects, Rupiyos obtained a large circulation in the next centuries.1

Coming to the Buddhist works, we have repeated mention of the words Nikkha, Suvanna, Hirañña, Kahāpana, Kamsa, Pāda, Māsaka, Kākanikā which all designated pieces of gold, silver or of other metals used as mediums of exchange. In addition, there

¹ The attention of scholars was drawn to this Sütra by the late Dr. Goldstücker (see Numismata Orientalia, p. 39, note 3). This question of stamping has been discussed very exhaustively by Prof. Dr. D. R. Bhandarkar in his Carmichael Lectures on Indian Numismatics (2nd Series).

were pieces of intermediate or fractional value. Thus we meet with half-Kahāpaṇa or quarter, and Suvaṇṇamāsakas.

NIKKHAS.—Of these, the Nikkha, Suvanna and Hirañña were of higher value and presumably coins of gold. The Nikkha was a coin equal in weight to that of 5 Suvannas according to the evidence of the early Pali literature, i.e., 5×16 māsakas=400 ratis. The Suvanna was equal to about Suvanna and Hirañña. $5 \times 6 = 80$ ratis. That it was a gold coin appears from its very name, "gold" and this compares very favourably with the names "Aurei" or the "Louis d'or". In addition to these, we find the word Hirañña. Now it is very difficult to decide the sense in which the word is used. Mrs. Rhys (J.R.A.S., 1901) comes to the conclusion Davids (after comparing some passages in which Suvanna and Hirañña occur side by side—e.g., Vin III, 219) that they signify gold coins and unstamped bullion respectively. Hirañña perhaps stands for gold in any form, coined or not. A gold piece of lower value was the Suvanna-māsaka, which though not mentioned in any of the canonical works, occur more than once in the Jātakas. Thus the Udaya Jātaka mentions Suvanna-māsaka in connection with the attempted tempting of Udayabhadda by her former husband. Again in the Samkhapāla Jātaka, we find another mention of the Suvanna-māsaka. We do not as yet know whether there were other gold pieces of intermediate value. (Car. Lec. II., p. 52.).

One important point to be noticed in this connection is the almost entire absence of the mention of the Satamāna. This may be explained as being due to the general acceptance of the standard weight of \$0 ratis in the various localities of northern India.

THE KARSAPANAS.—The next class of coins which obtained general acceptance was the Kahāpaṇa, and its fractional parts. This Kahāpaṇa or Kārṣāpaṇa was so called because it was of the weight of one Karṣa of metal of which it was composed.

This Kārsāpana seems to have been synonymous with the Pana if we are to take the opinion of Manu, but there will remain room for the gravest doubt in accepting his opinion (Kārṣāpaṇastu vijneyo tāmrikaḥ Kārsikah Panah). This question will come up for discussion later on. We go on; however, with the determination of the nature of the Kahapana. The mass of the evidence furnished by the Jatakas and other portions of the Pali literature seems to support the view that the Kahāpınas were mainly of copper and these were most widely in circulation in connection with transactions of everyday life. Thus when we find the daily wages of an actor put down at 1000 Kahāpanas, when we find the daily earnings of a tailor computed at 100 Kahāpaņas, when we find mention of the rate of carriage-hire put down at 8 Kahapanas per hour, when we find a fisher woman fined eight panas for a small offence, in all probablity the Kahāpaņas mentioned must be taken to be copper Kahāpaņas, Some cases, however, present difficulty and seem to raise the doubt that there were Kahāpaṇas of silver or gold also. Thus in Nanda (39) and Durājāna (64) Jātakas the

price of a lamb is put down at 100 Kahāpaṇas while in the Gāmanicanda Jāt. (257), the price of a pair of oxen is expressly stated to be 24 Kahāpanas. In this latter case if we take the Kahāpana to be copper, then the price seems to be not only low but ridiculous. Here silver Kahāpana seems to have been suggested. The existence of silver coins of this value is proved by the evidence of Manu who mentions silver Puranas or Dharanas, though these are never called Kārṣāpanas. The existence of silver Kārsāpanas is further proved by a passage of the Nārada Smrti (see Vīramitrodaya, p. 235, Rājato'pi Kārsāpano daksinasyām diśi prāvartata). Two more instances from the Jatakas may be quoted to prove the existence of gold Kārṣāpaṇas. Thus when the Brahmin (in Sīlamimāmsā Jāt. 18) steals Kahāpanas from the house of the Herañniko, and when the wife of a Benares merchant exhausts her forty crores of Hirañña by giving away Kahapanas every day, we may come to the conclusion that they were of gold. The assumption as to gold Kahāpaņas is thus borne out by facts and its non-occurrence is explained by the tendency of common people using the word rather loosely without reference to the metal.

Most of the names of these coins mentioned above have reference to a certain weight and Mrs. Rhys Davids following Manu (VIII. 134-136) prepared a

table of the weights of these pieces and approximately ascertained their value.

According to her

146 grains of gold = 16 gold Māsas = 1 Suvarna

of silver = 16 silver Māsas = 1 Dharana1

,, of copper = 16 copper Māṣas = 1 Kārṣāpana, and from this she arrived at the conclusion that-

One Suvarna was equal to ... £ 1. 5s.

... 9d. .. Dharana

,, Kārsāpana 1d.

From the evidence of the Manusamhita and the later Law Books the weight of a silver Purana was $\frac{32}{96} = \frac{1}{3}$ of a tolā. Hence according to the present price of silver it would amount to $\frac{1}{3}$ of a rupee or about $5\frac{1}{3}$ annas.

In the case of copper, it is clearly to be noted that the weight of a copper Kārṣāpaṇa was equal to that of a Suvarna. Hence the weight of each was 38 = 8th of a Tolā. Its value according to our present copper standard was thus less than 2 pice.

This reference to the weight of the silver coins, as given by Manu, is indeed very interesting. For when we come to the evidence furnished by authorities occupying an intermediate position in point of chronology, we note that in the days of the author of the Arthasastra, this silver Purana or Dharana. was equal in weight to 88 white mustard seeds (Aşţāśītigaurasarşapāh Rūpyamāşakah) multiplied by

¹ In the case of silver we find an error in Mrs. Rhys Davids' table since two Kṛṣṇalas (2 ratis) make one silver Māṣaka. Hence in the case of silver the weight was 32 Krsnalas.

sixteen. Now 18 Gaura-sarṣapas make one Kṛṣṇala. Hence a Dharaṇa was equal to 80 Kṛṣṇalas which is practically the same weight as that of a Suvarṇa.¹

The Kārṣāpaṇas were of various shapes and bore many symbols. They were square, rectangular and circular. As to the practice of stamping, we have already referred to it. The evidence of Pāṇini has already been cited. The Pātimokkha too refers to it in more than one place (V. 18, V. 19).

In those days, symbols or punches were stamped on them, either on one side or on both sides, as we know from specimens which have come down to us. While coins of gold have not reached us, we have innumerable specimens of silver and copper coins bearing Punch-marks. The symbols were numerous, and represented the peculiar signs of localities, banking-houses, or guilds.

The Kārṣāpaṇas originated probably as early as the beginning of this period. They have been referred to the 10th century B. C. by General Cunningham. Prof. D. R. Bhandarkar, in his brilliant lectures on Indian numismatics, would refer them to an even earlier period, though some other scholars like James Kennedy and V. A.

¹ See Prof. Dr. D. R. Bhandarkar's Carmichael Lectures on Indian Numismatics, Lec. III, pp. 91-94. He has discussed the subject, clearly and exhaustively and was the first to find out this discrepancy, and to give an explanation. His lectures are a valuable contribution to the subject of Indian numismatics. See also S. K. Chakrabortty, A Study of Ancient Indian Numismatics.

Smith would refer their introduction to the sixth century B.C. when trade with the Semitic countries came to be developed.¹

A discussion of the nature and origin of these coins is beyond the scope of Economic History. But this much may be said in passing, that there is nothing which goes to prove that they were anything but of indigenous origin. Even during the Vedic period, an indigenous currency had come into existence and this was based on the weight of the Kṛṣṇala. The unit of weight in the case of the Kāṛṣṇala. The unit of this Kṛṣṇala and nothing else. The practice of stamping or of putting symbols, was of indigenous origin and far from being borrowed.

As yet there is nothing to prove that there was any central authority which regulated the currency. The determination of the value was by weight and fineness of the metal (for a discussion see J. R. A. S., 1901, p. 871 and p. 878). Almost all the money-pieces, mentioned in previous pages, seem to refer to a system of weights, the lowest unit of which was the Krsnala or Rati.

On the basis of this unit, two systems, came into general acceptance. The one reckoned the weights of the coins of the highest value at 100 Kṛṣṇalas, while according to the other 80 Ratis became the standard weight of all coins whether gold, silver or copper. The older Satamāna standard thus still continued in some localities, and

¹ For date and origin, see John Allan, Cat. of the Coins of Ancient India, 1936, Intro.

this is proved by the evidence of the Vinaya Piṭaka which in one place computes one Pāda for 5 Māsas. Hence according to the practice of that locality, one Kahāpaṇa was equal to $5 \times 4 = 20$ (māsa) $\times 5 = 20 \times 5 = 100$ Ratis. The same perhaps gives an explanation to the statements in early Pali literature which reckons 5 Suvaṇṇas to the Nikkha. If we regard this Nikkha according to the older standard of 100 Ratis, then 400 Ratis = $5 \times 80 = 400$. Hence 5 Suvaṇṇas made one Nikkha.

We have at present very little evidence at our disposal to enable us to determine whether gold or silver was the accepted standard of currency. Both the standards seem to have existed side by side.¹

The copper or bronze pieces were used as token coins or ordinary media of exchange, and their value depended on the market. Their purchasing power in a market of abundant supply was very great, as we may know from the affixed table. Even such a small token as the Kākanika had a considerable purchasing power. The lowest medium of exchange was the Sippika or the Kapadaka or the cowrieshell (see concluding verse of Sigāla Jātaka, No. 113).

Last of all we must mention the Gopuccha. Pāṇini mentions it in more than one place (IV. 4, 6, and

¹ We have for the present no means of finding out the relation existing between the various standards. As regarls the ratio between the values of gold and silver, we are indebted to Dr. D.R Bhandarkar. On the basis of very reliable evidence furnished by a second century inscription, he has found out the ratio between gold and silver as 14:1. This must be regarded as a piece of invaluable service to the history of Indian currency.

V. 1, 19—Ārhād-agopuccha-saṃkhyā-parimāṇāṭ ṭhak). The meaning of this is very difficult to find out and we do not know whether it meant the simple 'cow tail' or a metal piece bearing the impression of the cow-tail.

Barter:—In spite of this wide circulation of metallic currency, barter continued to exist side by side with it. As to barter, some of the Sūtras of Pāṇini prove its existence in his time (See Pāṇini V. 1, 26—Sūrpād añ anyatarasyām; also V. 1, 27—Satamānaviṃśatika-sahasra-vasanādaṇ; V. 1. 27—Tena krītam). As examples of these Sūtras we have a large number of words which prove the existence of the practice of exchanging one article for another. Thus we have vāsanam, anything purchased with vasana, anything bought with śūrpa—śaurpa; anything bought with the exchange of mudga—maudgika and so on. The continuance of barter was due to the ease with which husbandmen or ordinary people could exchange their goods readily and easily.

In those remote ages, sale of and trade in articles of agricultural production was looked down upon by the higher castes (e.g., the Brahmins and the Kṣatriyas) and consequently we find barter recommended to them. Apastamba and Gautama expressly say so (Apastamba I. 7.20.15). Thus while trade is forbidden, a Brahmin is allowed to barter sesamum, rice, cooked food, other slaves articles and (see Va. Dh. S. II. 31 to 39; also J.R.A.S. 1901, p. 875). Barter was also prescribed for Buddhist monks and members of the Order since

they could neither use nor carry gold or silver (see J.R.A.S. 1901, p. 876; Vin, II. 174; III. 215-223 also Vin. text I. 2. 2. N. 1; see Pātimokkha, V. 18. V. 19.). The Jātaka evidence, too, confirms the use of barter. Thus, according to the evidence of the Taṇḍulanāli Jātaka, rice was used as standard of value even in the Jātaka period.

In addition to these instances of simple barter, we find also the continuance of the cow as a standard of value. Thus in the Sūtras of Pāṇini, we find the formation of compounds according to the rule "Taddhitārthottarapada-samāhāre ca" (II. 1. 51.) and as an example of this we have the word Pañcagu (meaning anything bought with five cows) which goes to prove the existence of the cow standard (of value) in his time. In the Dharmasūtras, too, which fall into this period, all fines for murder are reckoned in cows. Thus Bodhāyana, Āpastamba and Vasiṣṭha prescribe a fine of a 1000 cows for murdering a Kṣatriya (See Āpastamba I. 9, 24,1. Kṣatriyaṃ hatva gavāṃ sahasraṃ vairaniryātanārthaṃ dadyāt, śataṃ Vaiśyaṃ daśa Sūdram; see Bodhāyana—I. 10. 19,1).

PURCHASING POWER OF MONEY TABLE OF PRICES

The Buddhist works place a mass of materials at our disposal, which enables us not only to form an idea as to the purchasing power of money but also about the economic condition of those days. Incidentally, these books tell us something as to the state of the industries, the luxury of the richer classes, the rates of wages paid to workmen, and thus give us a picture of the life of those days.

The Jātakas contain a mass of details of every-day life, but their evidence is not always acceptable. They contain not only exaggerations, but an imaginary colouring of facts. In spite of this, however, the evidence furnished is invaluable, for even if we make allowances for such, we get something which throws a flood of light on the socio-economic life of those days.

The purchasing power of money was high and articles of food seem to have been very cheap. Quantities of meat, green grocery, spirits or other articles, sufficient for a single man could be had even for the copper Kārṣāpaṇa—and according to the Vinaya, a small quantity of ghee or oil could be had for that sum (Vin., IV. 248-250).

The price of ordinary clothing was not high. In the Pātimokkha, six and ten Karṣas (Kahāpaṇas?) are put down as the price of coarse clothing for monks and nuns. Some Jātakas reckon the price of coarse Cīvaras at 1 Kahāpaṇa, while that for a nun is said to cost 16 such pieces. References are not wanting, however, to rich clothes costing 1,000 or even 1,00,000 pieces.

Cattle and animals, especially those of an inferior quality, were very cheap. Thus in the Mahāunmagga Jātaka (546), an ass is valued at 8 Kahāpaṇas. Similarly, in the Gāma-

nīcanda and Kanha Jātakas (257 and 29, respectively) a pair of oxen is valued at 24 Kahāpaṇas, presumably of silver.

The price of slaves varied. In the Vessantara Jāt, the price of the accomplished girl enslaved by the Brahmin is reckoned at 100 Nikkhas in addition to cows and other things, while in the Durājāna (64) and Nanda (39) Jātakas the price is put down to 100 Kahāpaṇas. Here, too, it is difficult to regard this Kahāpaṇa to be of copper for in that case the price would be too low.

The price of horses is reckoned very high. It varied from 1,000 to 6,000 Kahāpaṇas, and this may be taken to be copper.

The lowest daily wages of a royal servant was 1 Kahāpana a day, presumably of Hire; wages. copper. In the case of a highlytrained archer, the daily wages are put down at 1,000 Kahāpaņas, this being an exaggeration undoubtedly. The fee paid to a barber for hair-cutting and shaving was 8 Kahāpaņas (of copper). Similarly, the fee of a high-class courtesan (Ganikā) is reckoned at 50 or 100 Kahāpanas, presumably of copper. Of other such details the following may be mentioned. Cart-hire for an hour at Benares was 8 Kahāpanas; a fish of considerable size cost 7 māşas (288); a cup of wine cost 1 masa. Certain articles were noted for their high price. Thus, a chariot is valued at 90,000, Kahāpanas. For a valuable gem 100 Nikkhas are offered. Sandalwood iss poken of as being very

valuable. Of remuneration to teachers, we find 1,000, Kārṣāpaṇa, as a moderate average estimate. In one specified instance (the Dūta Jātaka, 478) we find a poor Brahmin collecting 7 Nikkhas.¹

WEIGHTS AND MEASURES

As stated already, the Tulā (Scales) is mentioned in the Yajurveda (Vaj. Sam. XXX 17) and some of the weights, e.g., the Kṛṣṇala, occurs in the Vedic literature. In Pāṇini, we have some words, e.g., Māṣa, Vista, Āḍhaka, (V, 1.53) and Droṇa denoting weights and measures. In the Arthaśāstra, there is a list of weights and measures of those days. These were regulated by the state under the supervision of a Royal Official.

¹ Some more details as to prices are to be found in Fick's work and Rai Sahib I.C. Ghose's Introduction to the second volume of his Bengali translation of the Jātakas.

CHAPTER VII

PROGRESS OF CAPITALISM AND REACTION. BANKING; USURY

With the development of trade and industry, there was accumulation of capital in the hands of a class of rich men who became the capitalists and bankers of those days. The word Sresthi, meaning probably a banker, occurs in the Brāhmana literature. In early Pali literature we hear of various grades of Setthis (e.g., the ordinary Setthis, the Maha-setthis of big towns, the Anu-setthis, and the Uttara-setthis (Jat. 118). The Setthis of the Buddhist literature were probably rich capitalists, held in high esteem by the townsmen and even by the kings of those days. This would appear from the high position of Anathapindada, Mrgadhara (Migāra), Yasa and others mentioned in early Buddhist literature. The wealth of these people was almost fabulous and in the Jataka literature we hear of Setthis, whose wealth was reckoned in Kotis or tens of millions. From the evidence of these books, it would appear that each city contained at least one rich Setthi, who was designated by the name of the locality in which he lived. Rival Setthis too lived in the same city. Similarly, Janapada-setthis are mentioned in one Jātaka (Nigrodha Jāt., 445).

The position of the Mahā-setthis is not quite clear, and it is very difficult to determine whether they were

royal servants, or merely held a position of preeminence in view of their great wealth and headship
of the capitalistic interests of the locality. They
seem, however, to have been intimately connected with
the kings. Several Jātakas speak of their presence in
the court of the king (Jāt. 59, Puṇṇa-pāti Jāt. 53;
Illīsa, 78; Mayhaka, Jāt., 390). They seem to have
helped the kings by advancing money and counsel
in times of distress. As they enjoyed special favour,
they were also under the special jurisdiction of the king
and entirely depended on him. When any of the
Setthis thought of entering the Buddhist order, he had
to take the permission of his royal master.

The office of the Mahā-setṭhi was most probably hereditary. In case of failure of male heirs it passed to near relations. The Culla-setṭhi Jātaka mentions the accession of a young man to this post by virtue of his

being the son-in-law of the Benares Setthi.

The Anu-setthi seems to have been an assistant to the Mahā-setthi. The meaning of the word Culla-setthi is not clear. Some of these were made ministers of the kings and controlled the guilds and trading organisations of the country. They had, according to most authorities, high position and dignity and were respected by princes.

According to Mr. Rhys Davids, all disputes between one guild and another were under the jurisdiction of the Mahāseṭṭhi, who acted as a sort of chief Alderman over the aldermen of the guilds. The evidence of another Jātaka, however (e.g., Nigrodha Jātaka, 445), proves

that the minister named Bhaṇḍāgārika was entrusted with the duty of settling disputes between all guilds (Sabbaseṇīnaṃ vicāraṇārahaṃ Bhaṇḍāgārikaṭṭhānaṃ, etc.).

In the absence of other details, it is difficult to find out exactly the amount of governmental control over the capitalists and at the same time, the relation in which these stood to the various guilds. Probably the Mahāsetṭhis acted in a double capacity. On the one hand they were the Presidents of the industrial and banking organisations of the city, whose interest they represented in the royal council, while on the other hand, they acted as royal servants and became their councillors and advisers.

Banking:—Clear references to banking during this period are hardly available. We have however references to merchants helping one another in distress without any securities and we hear of deposits with friends (Vin. III. 237). The rise of a system of credits may be pre-supposed from the mention of purchases, by deposit of signet rings (Culfa-setthi Jāt. 4) but, as yet, there is nothing to prove the existence "either of fiduciary currency or of collective banking" (J. R. A. S., 1901). In the next period the word Adesa is found in the Arthasāstra, which probably meant a letter of credit.

Ordinary people hoarded their surpluses and kept these concealed underground within the house, or put them in cleverly concealed brazen jars. Rich people kept a register of

the amount and nature of their hoards in inscribed plates of gold and silver (See Jātakas, 39, 40, 73, 137).

Capitalists and bankers lent money on interest. Pāṇini in the 7th century B. C. refers to their transactions and some of his Sūtras seem to refer to the exorbitant rates of interest exacted by some of the money-lenders (see IV. 4. 30. and 31 and V. 1. 47). In his Sūtras we find the words Dvaiguṇika, Traiguṇika and Daśaikādaśika, which go to prove the great profit exacted by these men. In the early Buddhist books we have no references to rates of interest, and there is nothing in the Buddhist

rates of interest, and there is nothing in the Buddhist canon (except an occasional slur on usurers in Mahākanha Jāt. 469) which denounces usury. On the contrary, the Dharmasūtras forbid Brahmins and Ksatriyas to practise usury (Vasistha II. 40). The exaction of the usurer was heavy. Debtors were often imprisoned for debts. They were not allowed to enter the Buddhist order and ordination was refused to any candidate who suffered from liabilities (Vin. 1.76). Men were often reduced to slavery for non-payment of debts. Thus in the Therīgāthā, Isidāsī, a nun speaks of herself being reduced to slavery in one of her previous births on account of her father's debts. He, unable to pay his creditors, gave her to a merchant in satisfaction of his claim for principal and interest (Therigatha: see also D. 1. 71).

Loans were contracted, either on notes of hand or Inapannāni (Likhitam; Vas. D.S. XVI. 10), or on the deposit of pledges. The deposit of pledges tended to lessen the rate of interest. There are even instances of mortgaging wife and children.

When the loan was repaid, the debtor got back his note of hand. This would appear from the Khadirān. gāra Jātaka (40) and also from the Ruru Jātaka (482) where we find the highly embarrassed debtor summoning his creditors, along with his notes of hand to the river bank, where he promises to pay them in full but attempts to commit suicide in their presence by drowning himself in the river. From the evidence of the Gautama Dharmasūtra (XI. 21) the usurers seem to have formed a class and had an organisation (guild: Varga) and certain customary laws of their own which governed their transactions. We know nothing about rates of interest from the Buddhist books, but we find these in the contemporary Dharmasūtras. The Gautama Dharmasūtra mentions six or seven kinds of interest. Of these some may be mentioned, e.g., (1) the ordinary legal rate of interest; (2) compound interest, i.e., Cakravrddhi: (3) periodical interest to be trebled or quadrupled in case of non-payment during a certain period; (4) and corporal interest. The ordinary rate is specified at 5 Māṣas for 20 Kārṣāpaṇas, which comes to about 183%, which is not very high. (Kusīdavrddhih dharmyā vimsatih pancamāşakī. See Gautama, XII. 29).

Vasiṣṭha, whose opinion on interest, is cited by all subsequent law-givers denounces the trade of the Vārdhūṣika and fixes rates of interest, according to the

easte of the debtor. According to him, interest on loans varied from 2 to 5% per month. It stopped with the death of the king in whose reign the transaction took place (Vas. Dh. S., II. 48-49).

The regulation of rates of interest and the denunciation of the Vārdhuṣika go to prove the existence of the evils of capitalism, of cornering and the consequent

Denunciation of the commodities of general use. The evils of capitalism and cornering led

to state-intervention later on, as is proved by the evidence of the Arthaśāstra in which we find not only regulation of prices and profits but laws against cornering and the fixing of rates of interest. According to the Arthaśāstra, the rate of interest varied with the risk undergone by the capitalist who lent his money (see Ch. on Rṇādāna, pp. 174-75).

According to the law of the period, sons and heirs of a debtor were bound to pay off his debts unless these were contracted for evil purposes or other specified purposes for which no such liability was recognised (Vas. Dh. S. XVI. 31; Gau. XII. 40, 41).

CONTRACTS.—Business-contracts were regarded as sacred and were enforced by the state. The contract for the purchase of the Jetavana monastery and its enforcement is well-known to all students of Buddhist literature. During the next period, in the Arthaśāstra, we find the law of contract, the law of debt and other allied branches of civil law fully developed.

II

LANDED PROPERTY

Landed Property:—Next, we must consider property in land. As shown already, property in land had long become freed from restrictions of communal control and the last vestiges of such an obstruction passed away towards the close of the Vedic period. Land thus was an object of individual ownership. It could be retained in proprietory ownership or could be let on lease, either for rent or for a share of the profit (see Apastamba II., 21. 1. 6. 18).

Land and fields also became objects of division. While trade and industry drew away a large number to new pursuits, the Brahmins and the agricultural section confined themselves to cultivation. To the ordinary Brahmin householder, land seemed to furnish all the necessaries of life. Agriculture, though direct participation in it was condemned, was allowed to them if other means of livelihood failed. So was the case with the Kṣatriyas. It was also an object of gift. Some Dharmasūtras discourage traffic in land (Gau., VII. 15.) but the authors of the Dharmasūtras attach much importance to cultivation, and if we are to believe in Apastamba, a man failing to till a plot taken on lease was to undergo punishment and was fined.

While the Vaisya Grhapatis sold their products, the Brahmins and Kṣatriyas had recourse to barter, as described already. Traffic in certain classes of agricultural products was forbidden, but other agricultural products they could freely barter.1

TIT

DISTRIBUTION OF WEALTH THROUGH INHERITANCE AND DIVISION

The Dharmasūtras, our earliest legal authorities, always dwell on the merit arising out of division of property, as is shown by of Apastamba and some other Dharmasūtra writers (Gau.; Ap., II. 14).

Apastamba strongly pleads for the equal division of property and cites the instance of Manu's equal division of property among his sons. Preferential division among sons, however, was general (see Ap., II. 14;

Gau., XXVIII).

In general, sons were heirs to paternal property and this they could divide not only on his demise, but even during his life-time, and if the mother was past child-bearing. Daughters too could inherit in some cases, and in regard to maternal property they enjoyed preference to sons.

As mixed marriages were tolerated, various kinds of sons were recognized. The twelve kinds, enumerated in

The regulations of the Dharmasutras forbidding Brahmins to trade are very interesting (see Apa. I. 21, 10-16; Gau. VII. 8-21; Vas. II. 16-39). Certain traffics, e.g., in slaves, slave girls, animals for slaughter, cows, lac, salt, poison and arms are entirely forbidden. In regard to agricultural products, sesamum and rice, and according to some, red and black pepper were forbidden articles of trade. Trade in cloth was forbidden by some. Selling of milk caused degradation in three days. Similarly according to some, traffic in land and all animals was forbidden (Gau. VII. 15).

the Smrtis, were all recognized in society. Some of these were recognized heirs, while others succeeded if the former did not exist.

Various causes were operating for the preferential consideration of the claims of some kinds of sons. Mixed marriages were becoming unpopular and we have clear evidence proving that preferential shares were allotted to sons of wives of higher castes.

The tendency to equal division in Apastamba is worth noticing. Preferential division was already telling on social conditions and came to be regarded as unjust. Similarly, the exclusion of some kinds of sons shows that men were alive to the evils of too minute divisions.

As we proceed, the daughter's claims get less and less support.

Joint families existed, but probably these were more numerous among the cultivating and artisan classes, and fewer among the wage-earners and those who followed the professions.

Other causes of distribution of wealth existed, e.g., charity and munificence. Of the various castes, the Brahmins received gifts from princes and people. Charity caused much wealth to flow from the rich to the poor. In the Buddhist literature, especially the Jātakas, we have instances of public charity either in the cause of the church or for the poor. Anāthapindada made gifts to the church, and many such charitable millionaires existed. Gifts to the church, however, became unpopular, as we shall see later on. The village people, too, spent money for local charitable undertakings.

CHAPTER VIII

LABOUR

Labourers were mostly free and worked for their wages. The free labourers (Karmakāra, Kammakāra) entered into contracts as to their works and wages and in cases of dispute wages were settled by experts. The wage-earning labouring class existed in the days of Pānini who mentions the words Vetana and Vaitanika (IV. 4. 12). In early Buddhist Free labourers. literature, the Kammakāras are repeatedly mentioned but details are wanting. In addition to these, there were the day-labourers (Bhatikārakas) whose lot was probably harder. Some of the labourers were paid daily or monthly, while others were given food only. In regard to rates of wages something has already been said.

Next, there were the unfree labourers, e.g., slaves, who are mentioned in the early Buddhist literature, the Jātakas and the Dharmasūtras. Slaves were often employed to serve in their master's household or performing other duties in the field. The causes of slavery were many, e.g., capture in war, judicial punishment or degradation, voluntary enslavement and slavery for non-payment of debt (see Therigāthā, 441; also D. I. 60, 92, 93, 104; Vin. I. 72; Dialogues of Bud. I. 19). The Jātakas, too, speak of four or five kinds of slaves. Thus in the Vidhura-paṇḍita

Jātaka, No. 545, we find four classes of slaves, e.g., (a) children of slaves, (b) those who sell themselves to others for food or protection, (c) those who recognise others as their owners, (d) those sold for money.

Large numbers of men seem to have been reduced to slavery, by the raiding forays of robbers who captured men and women and sold them into slavery. Others appear to have lost their freedom, as punishment for heinous crimes. An instance of such degradation of status is found in the Kulāvaka Jātaka, where the king enslaves the tyrannical headman, as punishment for his crimes. The existence of slavery as a judicial punishment is found even in the Arthaśāstra.

Most of the slaves were domestic servants and were probably well treated, though violence to them was not illegal. They resided in the family of the master and performed all sorts of household duties. Some of the Jātakas bear evidence to their kind treatment. Thus in Jātakas 382 (Sirikālakanni) and 421 (Gangamāla) and 354 (Uragā Jāt.) we find the slaves and slave girls treated as members of the family. The slaves of the Samkha-setthi in Asampadāna Jāt. (131) bear testimony to their kind treatment, and of their lovalty to the ex-master. In the Nanda Jat. (39), the master shows his confidence in his slave by informing him of the whereabouts of his treasure. Again in the Nānacchanda Jāt. (289), the Brahmin consults his slave girl Punnā as to the nature of the boon he should ask of the king.

This was, however, the better side of the picture. In the hands of cruel masters the lot of the slave was one of terrible misery. Thus in the Nāmasiddhi Jāt. (97), the master and mistress of the slave girl Dhanapālī, beat her and put her on hire to work for others. Moreover, from the Jataka evidence, we further know that it lay in the power of the master, to beat his slave, to imprison him or to brand him. This is proved by the Kaṭāhaka Jāt. (125). There we find Kaṭāhaka the hero, a son of the Seṭṭhi by a slave girl. As a young man he had to act as a page to the master's son, and he always feared lest on the slightest offence, the master would beat him, imprison him or brand him. Thus thinking he took the earliest opportunity of escaping from his master's house and succeeded in marrying the daughter of a frontier Setthi cleverly impersonating as the real son of the Setthi.

We have in the early Buddhist books or in the Jātakas nothing to prove that a master could with impunity take the life of his slave. Probably that right too resided in the master, and this we may infer from the introductory portion of the Cullasetthi Jāt. (4) where the daughter of the Setthi feared that the father would cut her and her slave-lover to pieces if he heard of their liaison.

The chief difficulty with the slave was his loss of persona. Nothing except freedom could improve this social degration. The marriages of slave with free women hardly improved their status. Sons of slave

girls by their masters were hardly regarded as free men. Thus the Licchhavis never regarded Vāsavakhattiyā as a member of the Sākya family, since she was the daughter of a Sākya prince Mahanāma by the slave girl Nagamundā. Stories of intimacy of masters with slaves are common and in the Jātakas we have at least two instances of a master's daughter falling in love with a slave. Many slaves ran away from their masters, crossed the frontier and improved their position by marrying the daughters of respectable people (125—Kaṭāhaka Jāt.; Kalaṇḍuka Jāt., 127).

Slavery was not restricted to a particular class or caste. Brāhmins, Kṣatriyas and men of high birth were often reduced to slavery. The traditional Buddhist accounts paint Purana Kassapa and Ajita Kesakambali as being slaves in their early life. The Vessantara Jātaka seems to point to the fact that the enslavement of a high-born prince or princess was nothing which could shock the social ideas of the day.

In the Arthaśāstra alone (written early in the next period) we find regulations for the protection of slaves from the unkind and cruel treatment of their masters. In addition, there are regulations for the manumission of slaves on account of ill-treatment or their being able to pay their own ransom. The tendency of the Arthaśāstra was to abolish slavery altogether. The Buddhists regarded slaves as the property of their masters and did not allow them to enter the order. Other religious orders seem to have admitted them, and admission into any religious order made them free

men. Manumission of slaves was looked upon as an act of virtue. In the Dharmasūtras we find slavery existing though, according to Apastamba, a Brāhmin was never to engage in the traffic of slaves (1,7,20.15). He was, however, allowed to exchange his slave for another. Perhaps, here we may find the germs of that liberal tendency which is so well developed in Kauṭilya.

The average price of an ordinary slave was not very high. The preambles to the Jātakas, e.g., the Nanda Jātaka (No. 39) and the Dūrājana Jātaka, point to 700 paṇas. In the second Jātaka a man speaks of his "wife being meek as a slave girl bought for 100 paṇas some day, and a terrible termagant some other day." From another Jātaka (Sattubhastā No. 402) we know that 100 Kārṣāpaṇas was enough for a slave.

The price of slaves varied with their accomplishment, good birth or (if a woman) beauty. In the Vessantara Jātaka the princely father, when parting from his boy and daughter, speaks of the daughter as being only fit for a princely purchaser who could offer 100 Niṣkas, in addition to a hundred slaves, horses, cows and elephants. In the case of the prince his ransom-money was estimated only at 1,000 Kahāpaṇas.

The number of slaves was undoubtedly very large, but we have very little evidence to prove that in India slavery ever became the basis of the economic life of the people; on the contrary, free labour predominated.

CHAPTER IX

CLASSES OF POPULATION

- THE LAND-OWNING CLASSES. These, whose origin towards the close of the Vedic period we have already traced, included the nobles who formed a hereditary proprietary class living on the labour of their subjects and tenants and giving themselves up to amusement or other pursuits. In addition to these another land-owning class existed in the Mahāsālas, who were mostly Brahmins and in some cases Ksatrivas. The Jātakas, too, speak of the gift of Bhogagrāmas to priests. They enjoyed grants of villages made by kings of Kośala and Magadha. In the dialogues of Buddha we find the names of many such people, who received royal bounty in this shape, by virtue of their proficiency in the sacred lore. The agriculturist householders were represented by the Gahapatis and Kutumbikas of the Pali literature. Most of these like Bharadvāja or Dhaniya owned big plots of land and cultivated them. The majority of them were well off and happy, and were men of wealth and substance. Some, however, seem to have fallen on evil days and had to work as labourers (Sutano Jāt. 398).
- 2. THE MERCHANTS. Though fewer in number they were perhaps the wealthiest section of the community, and made large gifts to the poor or to the

religious orders. Some of them had huge fortunes always estimated in Kotis.

- 3. THE ARTISANS (men of the guild). These were free men and enjoyed a considerably high social position. Their wealth was considerable and they were above the reach of poverty. Their corporate organisations made their position stronger.
- 4. The Wage-earners and members of independent professions. This class which must have been a considerable one included men who followed the occupation of physicians, teachers, accountants, and priests. This class was not generally very wealthy but was above want. Occasionally, some of these made good fortunes (note the instance of Jīvaka the physician, who got a fee of 16,000 gold pieces). Teachers mainly depended on the fees paid by students and occasionally received big sums. 1,000 Kārṣāpaṇas was the amount generally paid on the completion of study.
- 5. Poorer labourers, slaves and aborigines. The condition of these classes was not very enviable. They often suffered from want and had to depend on others. Often they sold themselves to slavery.

In point of wealth and social importance arising therefrom, the princes, the nobles and land-owners as well as the Sresthi bankers, and merchants occupied the highest position. Next in importance were the middle-class householders and Grhapatis owning and cultivating their own fields, the artisans and the ordinary traders. Below these were the poorer cultivators of the soil, men engaged in lower arts (hina-

sīppāni) and the labourers and servants. At the bottom of the society were those who lived by hunting, or gleaning the fields, the aboriginal tribes and the slaves who were regarded as the property of others.

TT.

WEALTH: LUXURY: CHARITY

The general wealth of the community was high and this is proved by the stories of the hoards of bankers and merchants, the large use of gold and silver money. and the luxury of upper classes. The hoarded wealth of the rich was estimated in kotis, and they spent it liberally. Their munificence is apparent from stories of large donations to various religious orders and the establishment of almoneries. Thus in Khadirangara Jat. (40) we are told of a Setthi who had established six almonaries, two within the town and four at each gate. The preamble to the same mentions the pious benefactions of Anathapindada and these included the establishment of almoneries, and supply of food to the monks. Incidentally we hear of the practice of dedicating tanks on square paths and the non-realisation of loans advanced to traders or householders in distress.

The existence of the dancer, singer, dress-maker, shampooer, acrobat, actor, and the story-teller, who formed a non-producing parasitical class, point to the prosperity of the upper classes. It is further proved by the rich festivities, large fees paid to courtesans, the

high price of rich wines and the stories of betting with big sums (see Bhūridatta Jāt., 543). The middle-class people were happy and often above the reach of want. They too lived a life of ease, indulged in charities, made gifts to the Order, raised money by subscription for charity or for works of public benefit and joined in merriment and festivities.

Of course, the poor often suffered from the exactions of money-lenders or the raising of prices by cornering, as they do in all ages and at all times. Famines too occurred at intervals and added to the distress of all classes.

One thing, however, is noticeable, e.g., the bitter struggle for existence was wanting in the country taken as a whole. This was due partly to the fact that the production in the country was ample and society did not rest content with the happiness of classes, but felt for its members in distress. Hospitality was regarded as the highest duty of householders. The Dharmasūtras repeatedly enjoin the duty of feeding guests, infants, old and sick people, pregnant women, and even Sūdras. who come for food (Apastamba says, a Sūdra may be fed after he has performed some work for his host; see Apas. II. 2. 4. 19). While such was the social duty of all householders, the king was regarded, as we shall see later on, the natural guardian of the widow, orphan or the indigent. Apastamba calls upon kings to build a hall open to guests learned in the Vedas and an assembly-house for the use of men of the three upper castes and to see that no Brahmin

suffers from hunger in his realm (Apastamba II, 10. 25. 4-12).

India was rich. Stories of her great wealth and prosperity reached the ears of foreigners and roused their greed, and this made them invade India. In the 5th Century B.C. the portion of the Punjab under the occupation of the Persians was regarded as the wealthiest province of their empire and yielded the vast tribute of 360 Talents of gold annually (£ 3,000,000).

CHAPTER X

GENERAL CHARACTER OF ECONOMIC EVOLUTION

From what has already been said, it would appear that the general economic condition of the country was one of great prosperity. The mass of the people was well off, knowing little of scarcity and as yet there was nothing of that bitter struggle for existence which characterised the subsequent stages of development.

This many-sided prosperity of the country was due to various causes which tended to give a wider scope to the activity of the various classes of the population. Agriculture flourished, under the fostering care of the princes, new plants were cultivated, and the quantity of production was increased owing to the extension of the Aryan population over the fertile regions of eastern and south-eastern India.

The introduction of silk and cotton cultivation paved the way for the development of the textile industry. The opening of direct trade-relations with western Asia gave a further impetus to the growth of Industry and foreign industry by opening up new markets for the productions of Indian handicraft. The growth of industry in its turn gave the industrial sections a better opportunity and added to their prosperity.

Their guild-organisation became more and more complete and with its help they improved their

condition. Artisans and labourers were better off and they could earn fair wages without being dependent on any other section of the population.

Side by side with these, other changes too took place. The main centres of activity of the industrial and commercial sections of the people were shifted from the villages to the towns which grew in prosperity. The landless and poor labourers, in addition to the rich, congregated into the towns, which became centres of distribution for the goods of various country-parts, and this again gave an impetus, which tended to widen the scope of national activity.

The revival of trade contributed to the wider circulation of metallic currency and added to the wealth of the country in general. All these causes added to the prosperity of the various sections of the populace. The masses became richer, and India became prosperous than ever. Her mariners exploited regions beyond the seas, came in touch with foreign nations and added to the country's wealth.

Town life or the new conditions were, however, distasteful to a conservative section, especially the Brahmins, who are asked not to frequent towns or the congregation of the many. They continued to prefer village life, and remained attached to agriculture and continued their abhorrence for trade or industrial life.

CHAPTER XI

THE STATE IN RELATION TO ECONOMIC LIFE

The socio-economic ideas of the period as also the ideas regulating the relation between the individuals and the state were gradually evolved out of the similar conceptions of the Vedic Age. The people expected protection and active help from the state. We have very little of theories in regard to these matters in the Buddhist books, but, as stated already, the ideal king is represented as granting loans of corn to peasants, or settling them on royal land.

In regard to the relation subsisting between the king and his subjects, a contractual obligation was supposed to subsist between them. The germs of this theory are found in the Brāhmaṇa literature, while in the Aggañña sutta we have an exposition of the theory of the origin of society in a contract between the king-elect (Mahā-sammata) and the people. The theory is found well-developed in the Sāntiparva, based on an older tradition relating to Manu and his election by the people (Sānti. ch. 67).

As regards taxes paid to the king, these were regarded as wages paid in lieu of his services. In regard to the sources of the king's revenue we have very little of details in the Buddhist books. But from the scanty information available we find that these included—

(1) a share of the produce of fields, measured and exacted in the name of the king by the Drona-māpaka;

- (2) duty on articles of merchandise (see p. 213), on imports and on exports;
- (3) excise duty on wines and liquors (chāṭikahā-paṇa) which the Grāma-bhojakas exacted from the villagers;
- (4) other taxes including those collected at the gates of the city (see Mahā-ummagga Jāt.), or occasional gifts made to the king on the birth of a son (See Suruci Jāt.).

In the Jātakas we hear of no taxes on the artisans, but we have instances of villagers uniting to do service for the king (e.g., to help him in his hunting expedition.)

In the Dharmasūtras we have more details. According to these the taxes included—

- (a) a share of the produce, which varied according to the various authorities (Vasistha I. 42; Vasistha says it was 1/6, but according to Gautama it varied from 1/10 to 1/6 of the produce—X. 24).
- (b) a tax on cattle and gold amounting to $\frac{1}{50}$ of the stock (Gau. X. 25, see also Sāntiparva, 67);
- (c) toll on merchandise, amounting to 1/20 of the value (Gau. X. 26-27) together with 1/60 of roots, flowers, meat and medicinal herbs, etc.;
 - (d) duty payable by owners of ships and carts;
- (e) gifts of merchandise, once a month, by merchants for less price than in the market;
- (f) In addition to these, the king was entitled to all treasure-troves, lost articles, escheats on lapse of heirs, a share of the booty gained in war, and further-

more artisans had to work one day in the month for the king (See Gau. X. 31).

EXEMPTION FROM TAXATION: -Thus almost all producing sections were taxed, but some classes were exempt from taxes. Most of the exempted classes were non-productive and these included Srotriyas, women of all castes, children, students and ascetics forbidden to hold property, diseased persons, Sūdra servants (See Vaś. XIX. 23., Apas. II. 1(-26, 10-17). To these Vasistha adds those who live by exploiting rivers, forests, or hills, and also those earning less than a Kārsāpana (Vasistha, Ch. XIX. 26 and 37) as suggested in a verse attributed to Manu.

Far from taxing them, the king, according to the evidence available, was bound to maintain the Srotriyas. the weak, the aged, women without means, and lunatics (Vasistha, XIX. 35; Gau. X. 9-12).

Socio-Economic Ideas: - Economic theories proper do not seem to have been developed in those days, and all speculation ends in a fine idealism about a regulated social existence. We have nothing which can help us in showing whether the ancients knew, or cared to know the laws governing demand and supply or production and distribution. The conception of wealth was rather loose, anything enjoyable being regarded as wealth.

1. From the economic point of view, the functions of the head of the community were extensive. As stated above, he was not to confine himself to mere police duties or administration of justice, but had to do

everything in his power to further the interest of the people. Society regarded the life of the people as sacred, and it was the duty of the state to find out means of subsistence for the people. Failing that, the king was to maintain those without means and to relieve distress. As in many other primitive communities, the state was more social than political, and the concept of state-duties, though not elaborate, approaches that of the modern socialist.

Another important point in this conception was the idea of social solidarity and its dependence on the mutual co-operation of the classes. The classes were assigned certain duties, and in the fixing of the relations, the social position of castes and sub-castes was taken into consideration. The caste theory, which had arisen in the Vedic period, was becoming rigid. To see that these duties are carried out without restraint, certain castes were forbidden to encroach upon those of others. This seems to have been the reason which restrained the Brahmin from directly engaging in agriculture, trade or usury. The idealism of the Dharmasūtras, whether real or imaginary, is worthy of notice, and as we proceed, we find a further development of this permanence of relation between caste and craft in the Smrtis. This marks an important phase in the evolution of the caste system, which must be looked upon as a federation on the basis of socio-economic duties and privileges. The different sections of the various castes and sub-castes were organised on guild lines, and from

the point of view of their internal organisation, were democratic. Within the guild, there was a harmonious association of labour and capital and thus a struggle between the two divergent elements was avoided.

3. Society, though split up into castes and classes. was looked upon as an organic whole, and its salvation was supposed to depend upon the harmonious co-operation of the various sections. The idea of co-operation gave rise to or very nearly coincided with that of a just remuneration or price. This, though not so developed as in the Arthaśāstra, or in the later Smṛtis, shows, how even in these days, society expected every section, to exact its proper share of profit and nothing more. Cornering or undue raising of prices came to be considered (Vasistha, II. 41-51) as inimical to society and on the same principle the rates of interest were fixed. As the idea of a just price gained ground, the Vardhusika came to be denounced (Vasistha, II. 40-42), since his exactions were telling heavily on society. His food was regarded as impure (see Ap. I, 6, 18. 22.).

While exploitation of others by capitalists came to be denounced, society attached great importance to the performance of duties, assigned to individuals and castes and such adherence to duties was regarded as something leading to heaven. The conservative sections, especially the Brahmins, regarded agriculture as a duty of land-owners. Lessees and those who neglected it, were fined, as well as the negligent labourers, who were flogged. Deviations from caste duties in the case of Brahmins were denounced.

The adoption of the military or medical profession (in the case of Brahmins), the practice of usury or crafts, and letting of houses, were regarded as causing a loss of social position (see Apastamba, I. 6.18.16—22).

- 4. The concept of social duty, also called upon individual house-holders, not only to maintain their family but to help others in distress. A servant was also to help his master in distress. Ultimately there was the state, which came to the assistance of its indigent subjects by freeing them from taxes and maintaining them.
- 5. Mendicancy, beggary or undue asceticism was regarded as a social evil, except in the case of men in the decline of their life. This appears from the trend of the conversation between Buddha and Ajātaśatru. In the Apastamba Dharmasūtra, a mendicant in violation of the law has been denounced while Vasiṣṭha denounces begging Brahmins as thieves (Vas., Ch. III, 4).

GENERAL TENDENCY TOWARDS STATE-INTERFERENCE IN ECONOMIC LIFE

The economic arrangements of the period as described above, do not show any great amount of state-interference. As yet there was neither the monopolies, nor royal ownership in mines, nor do we find royal officers regulating prices and profits. Yet the germs of the later system as described in the Arthasāstra can be easily detected in the Dharmasūtras or the Jātakas.

Thus in regard to revenue, the taxes on produce, the duty on articles of trade, and the excise on wine exist in the Jātakas. Moreover, in the same books we find the tolls collected at the gates (see Mahāummagga Jāt.). These exist in the Arthaśāstra. The germs of the occasional taxes are found in the Jātakas. Thus the practice of paying a small sum to the king on the birth of an heir, is clearly the forerunner of the Utsanga. Similarly in regard to the forced labour of artisans, we can see its early existence in the Dharmasūtra of Gautama.

In regard to mines and forests, Vasistha seems to regard these as res communes, which were enjoyable free. Prior to the rise of the Maurya state, the conquests of the Saiśunāgas and Nandas, had already converted some of these into royal domains. In the days of small states these belonged to nobody, but when these were conquered by the Magadha king, all intervening territories in addition to forests and other unclaimable natural sources passed to the dominion of the conqueror.

State regulation of prices and profits came as a natural sequel. In the Jātakas, we find the existence of the Agghakāraka, who valued everything on behalf of the king. Gradually as cornering began to tell heavily on the people, the latter looked upon the king to intervene on their behalf and what was once done in the interest of the king came to be done in the public interest. Similar situations, called for, and resulted in the regulation of weights and measures and later on, of the currency.

In regard to labour and wages, interference came with a view to checking the exorbitant demands of labouring people. The germs of a labour legislation are found in the Dharmasūtras which lay down regulations for punishing servants employed in tillage or herdsmen who leave their work, and thereby cause loss to the employer. A relation between work and wages also came to be thought out, as we find in the Sāntiparva, ch. 67 (see supplementary chapter). We find also laws directed against mendicancy or beggary. Kautilya's opposition to indiscriminate mendicancy marks an important chapter in the social history of India.

Thus we find that the policy of interference of the Maurya monarchy was not the creation of a single day or of a single brain, but was the logical sequel to the forces and factors operating in the previous period.

BOOK IV

SUPPLEMENTARY EVIDENCE FROM THE RAMAYANA AND THE MAHABHARATA

BOOK IV

CHAPTER I

T

SUPPLEMENTARY EVIDENCE FROM THE RAMAYANA AND THE MAHABHARATA

Before we pass on to a study of the economic condition of India attending on the rise of the centralised Maurya Empire, something ought to be said as to the picture of the economic life described in the two Epics—the Rāmāyaṇa and the Mahābhārata.

Each of these two great works throws a flood of light on the conditions of India in the past, but as is well known to most scholars, there is a great difficulty in utilising the materials furnished by them. The two great works were not the production of a particular period, but grew out of older nuclei, handled and rehandled by subsequent composers. They thus took centuries to be reduced to their present form. Moreover, though attributed to single writer, each seems to have been composed piece-meal, re-touched and so re-handled several times afterwards as to leave the traces of subsequent handling.

Our difficulty therefore lies in separating the various strata of composition, which are sure to bear the stamp of the age in which they were produced. The traditions about historical events may be reproduced intact by a subsequent writer, but whenever, some one tries to draw a picture of social life, it is sure to be influenced imperceptively by the ideas and conditions of the age in which the writer lives.

Such has been the case with the Rāmāyaṇa and more so with the Mahābhārata. Of the two again, the Rāmāyaṇa, though coloured by the poet's imagination, gives us a picture of a more primitive period. In the case of the Mahābhārata, we get indeed a glimpse of the period to which the events are taken to belong, but the general picture is occasionally so coloured by the additions and modifications of later ages that it is difficult to form an idea of the period, the events o which are professedly narrated.

As instances of such modifications, we may point out the mention of Dīnāras in the Mahābhārata, the political and social tendencies of the Anuśāsana Parva, the mention both in the Mahābhārata and in the Rāmāyaṇa (Bāla. chs. 50-51), of foreign tribes like the Sakas, Cīnas, Hūṇas or the Pahlavas, many of whom came to India not earlier than the first, second, third or the fourth centuries A.D. Other instances of comparatively late additions also occur.

Yet a careful examination shows that in spite of this modification of some chapters, the main bulk of the two Epics gives us pictures of social and political life far removed from those which we get in later compositions. The picture of social and political life in the Rāmāyaṇa is essentially primitive. The whole country to the east and the south was more or less

covered with forest. There was a vast forest region to the east of Mithilā. The whole of the Vindhya region and Dandaka were covered with jungles, inhabited by wild animals and savage primitive men. Such was also the character of the Kiskindhyā region and we hear very little of settled kingdoms or of cities.

The Mahābhārata account, though more coloured by the poet's imagination, gives us also the description of a comparatively early stage of development. It was certainly not so primitive as that described in the Rāmāyana, yet it carries us to an age anterior to that which saw the great movement for the establishment of centralised monarchy in Northern India culminating in the Empire of the Nandas and later on of the Mauryas. We are carried back to the age of the small city-states, the tribal democracies, and the republican Ganas, and Sanghas. The picture of life, though often coloured by poetic imagination, is not far removed from that which we have in some of the early Brahmanical Sūtras or that described in the Jātakas. To speak generally, the age of the Mahābhārata, as also of the Rāmāyana, was one, so far as economic life was concerned, which coincides with that characterised by-

- (1) the growth of town-life,
- (2) the growth of crafts and the organisation of craftsmen into guilds,
- (3) the development of trade, both internal and foreign (though the data in regard to the latter are very meagre).

Difficult as the problem of utilising the evidences of the two Epics is, we think we will not be very far removed from truth if they are used as supplementary data in support of the picture of the economic life in the second period.

We have summed up the chief characteristics of the two Epics so far as economic life is concerned, but before we enter into an examination of the above characteristics we must say something about the various regions of India in regard to their economic products. Both the books give us some data in regard to the products of the various localities in connection with gifts presented to kings by their feudatories, on the occasion of their performance of the Aśvamedha or the Rājasūya.

The Rāmāyaṇa evidence in regard to this is rather meagre, but inspite of it we find the following inform-

ation:

II. LOCALITIES AND THEIR PRODUCTS

1. The countries of Kāmboja, Bāhlika and Vanāyu were famous for horses (Bāla., ch. VI, 21). In one place we are told that the Kekaya king made a gift of 10,000 horses (Uttara, ch. 113) of Kāmboja.

2. The elephants of the Vindhya region were known for their size and strength (Bāla., ch. VI, 22).

3. In the Ayodhyā Kāṇḍa (ch. 82) we are told of the gift of jewels (ratnāni) made by the Sāmudras (seagoing merchants) of Kauṭya, Aparānta and possibly

of the Kerala country (Kevala?) in addition to that made by merchants of Udīcya, Pratīcya and Dākṣi-ṇātya.

4. Various other commodities are mentioned but the localities are not specified. Thus in many places, gems and pearls are mentioned. The description of courts and palaces shows the large use of gold and silver. We hear of bows and shafts of gold, golden coats of mail, scimitars of gold, not to speak of vessels, plates or seats of gold, used in bedecking palaces. In regard to gold, the epithet Sātakumbha-maya is used in many places. The various chapters show moreover the use of bangles, pendants, ornaments, and garments of gold. The use of bell-metallic vessels is mentioned in more than one place.

Of other products, we have repeated mention of silken cloth. The queens of Kośala are described as wearing silk garment and Sītā in Rāvaṇa's house is spoken of as wearing silk. Kambalas (blankets) are mentioned in many places. Thus the Bāla Kāṇḍa (ch. 74, 3) speaks of Janaka's gift of Kambala, Kṣauma Ambara and carpets (paṭṭam). Yudhājit is also described as making a present of Kambalas and cloths with designs (citra-vastra; Uttara, ch. 114). In addition, we have mention of woolen stuff (Bāla., ch. 73., Kiṣ. ch. 50) cotton and linen garments.

In the Mahābhārata, we have more details as regards these. Not to speak of scattered references to local products, we have in the Sabhā, Rājasūya, and Aśvamedha chapters, a large variety of the goods brought

to Yudhiṣṭhira and these throw light on the various regions of production. It will be an interesting study to compare these local products mentioned in the Mahābhārata, with those in the Arthaśāstra or later works. Such a comparison will show that the Epic poets did not solely rely on their imagination to furnish details.

As to the various products and the localities of their production, we may refer our readers to the following chapters of the Mahābhārata, e.g., Ādiparva—chapters 199, 221; Sabhāparva—chapters 28, 30, 31, 49, 51. The first two enumerate the gifts of Kṛṣṇa to the Pandavas while in the other chapters, we have a list of the gifts and presents made by the tributary princes to Yudhisthira on the occasion of his Rajasuya. In the list of the feudatories, we have mention of princes and chiefs hailing from Manasa-sarovara, from the extreme hill regions, Meru and Mandara, from the East, West and from the extreme South. The tributaries include men of fabulous description, e.q., men with one eye, one foot, with long ears, with horns on their head, and all these remind us of the tales of Megasthenes or those embodied in the later Puranic accounts. The gifts include gems, pearls, gold and silver, varieties of cloth, carpets, precious stones, elephants, cows, horses, camels, weapons of steel, slaves, slave girls and various other things. Among those who make the presents were kings of the Pandya country, Sakas and Cinas, and according to our present ideas they are but later additions. The most important

of these products are arranged according to the locality of production.

Eastern countries, various loca-Elephants lities of west and south.

Kāmboja, Gandhāra, Bāhlika, of the best Horses Prāgjyotisapura. quality.

Mathura, the country of the Cattle, kine, donkey ... Vātadhānas.

The western regions. Camels

Kāmboja. Blankets Woollen blankets inclu-

ding those made of the hair of mouse, and cat (vailan and Varsadamśān), embroidered cloth and cloth of gold (Jātarūpa-pariṣkṛtān) ... Kāmboja.

Other varieties of blankets, coverlets, deerskins, etc.

Bāhlika and Cīna.

Aparanta, Eastern countries, Cotton cloth Malaya.

Eastern Bāhlika, Cīna, Silk regions.

Prāgjyotisa, Aparanta and the Weapons of steel Eastern regions.

Sandal wood & aloes ... Malaya mountain regions; also the sea-coast regions.

Pearls ... Pāṇdya and the country of Mleccha princes on the seaside.

Rice and cereals ... Indus delta.

These are the localities, and it is curious to note that when we come to the Arthaśāstra, descriptions in the latter work very nearly tally with this account. In regard to the precious metals, we find no clue to the regions producing gold, but the epithet Jāmbunada is applied to it (Vana., ch., 243, Sānti., 39.) which is also found in the Arthaśāstra.

In addition to these, we have mention of various other products. Thus we find mention of red silken cloth (Adi., 221), cotton cloth, linen garments (Adi., ch. 199), chariots of various descriptions, weapons, swords, arrows, javelins, armours, leather goods, including gloves made of the skin of the big golden lizzard, works of ivory, ornaments and various other articles of use, not to mention those of everyday necessity.

III. AGRICULTURE: FAMINES

As regards agriculture, there is nothing special to mention, nor, do we have any description of village or agricultural life. In all descriptions of cities and countries, we find them spoken of as abounding in foodgrains. Villages are often described as having fields on their skirts. The Rāmāyaṇa mentions the Mahāgrāmas of the Puṇḍras and of the Magadhas.

Famines, owing to want of rain, caused suffering on the part of the people. We have two accounts of famines, one in the Rāmāyaṇa, in the kingdom of Romapāda, and the other described in the Mahābhārata, of the consequences of which a harrowing account is given in the Sāntiparva (ch. 141).

IV. HOME AND FOREIGN TRADE: SEA VOYAGES

As regards trade, we have but little details. In connection with the description of cities, we find mention of merchants, and also streets lined with shops containing merchandise. (This we find, in the description of Ayodhyā—Bāla, V; again in the Sundara-kānda, we have a description of another city; in Uttara, 83, a city is described as containing merchants from all In the internal trade, river traffic was largely used and there was an abundance of river-craft. This would indeed appear from the description of the Ayodhyā-kānda, where the Candāla king Guhaka. commands his Kaivartas to have 500 vessels in readiness, as if to resist the passage of an enemy. Occasional references to the sea are met with but nothing more is known. In one place of the Ayodhyā-kānda (ch. 82) merchants (Sāmudras) of Aparānta and Kerala are evidently referred to.

In the Mahābhārata too, details are lacking. In the Sabhā-parva, on the construction of Indraprastha, we hear of merchants coming to settle in the new city. In many places the use of river-craft is found, but details are lacking. In one place the Pāṇḍavas are said to be using a vessel (described as Yantrayuktā and Patākinī). The Sabhā-parva repeatedly speaks of merchants and occasionally we hear of merchants from foreign countries beyond the seas.

V. Indian and Extra-Indian—Geographical Knowledge

On this head some more information, however, is furnished by those chapters of the Kişkindhyā kānda. where Sugrīva directs his monkey chiefs to go out in search for the wife of his ally Rāma. These chapters. we know not whether old or late, show that they had, not to speak of transmarine intercourse, a knowledge of Indian and extra-Indian geography, which was not inconsiderable. The accounts, though full of fables about strange men and creatures, are interesting as furnishing remarkable details. Thus in the East we are not only told of the Mahāgrāmas of Magadha and of the Pundras but we are told of the land of the Kosakāras and Silver producers (Rajatakāras), of the islands peopled by cannibalislic Kirātas, Yavadvīpa with its seven kingdoms, and of the islands of gold and silver. Beyond this, was the ocean of red waters, and another ocean with the Sudarsana Island in it. In the south, the monkey chiefs are directed to go to the land of the Andhras, Pāndyas, Colas, and Keralas, in addition to various countries of fabulous description. Similarly. in the west we find various countries enumerated. The account, moreover, is supposed to contain a reference to the Polar regions which for six months remain dark

and where no sun rises. We know not whether these are later additions, but the account is of great interest showing the extent of the geographical knowledge of the ancients (See N. C. Das.—Ancient Geography of Asia).

VI. DEVELOPMENT OF TOWN LIFE DESCRIPTIONS OF TOWNS.

From the descriptions contained in both the Epics, town life seems to have been well developed. In the Rāmāyaṇa, towns (Nagaras) are mentioned and contrasted with villages. Only a few however have been described, such as., the town of Ayodhyā, the city of Janaka, and the city of Rāma's adversary Rāvaṇa. Similarly, in the Mahābhārata, we have descriptions of Hastināpura, Indraprastha, Vāraṇāvata, the capital of the Pāñcālas and incidental descriptions of some more.

A description of Ayodhyā is furnished by the Bāla-kāṇḍa (ch. V), and further details are furnished in connection with the contemplated Yauvarājya of Rāma, or on subsequent occasios. The city is described, as being surrounded by wide ditches and high walls, in which there existed gates and towers (Aṭṭālaka) bearing pennons, carrying weapons of offence and defence and garrisoned by soldiers of all arms (kapāṭa-toraṇavatī and uccāṭṭāladvajāvatī). Within the city, lived men of various cashes and professions and merchants from different countries. There were stocks of all kinds of merchandise or articles of everyday necessity. In the Uttara-kāṇḍa (Ch. 83) another town is described as containing streets lined with shops of merchants.

It was also inhabited by merchants of different countries.

Similar descriptions of Lankā are furnished by various chapters (see Aranya, ch. 50, 55; Lankā, 75; Sundara, 2 and 11) which dwell upon the beauty and grandeur of the Demon King's capital, but these are more or less the creations of poetic fancy and it is needless to mention details.

The Mahābhārata, similarly furnishes us with descriptions of towns, but these are not so detailed as in the Rāmāyaṇa. Thus, in Chapter 207 of the Ādi, we have the story of the building of Indraprastha, and descriptions of fortifications and its defensive arrangements. In regard to other details, we are told of the settlement of merchants, craftsmen and skilled artisans (sarvaśilpavidaḥ). The cities of Virāṭa and Drupada were similarly fortified and organised.

From all these descriptions, towns seem to have been the centres not only of cultural life, but also for the distribution of goods and commodities within the states of those days, which may be likened to the small city states which existed elsewhere in the world. Some of the industries came to be located in the cities, as will be seen in the case of Ayodhyā. Villages remained as before, productive areas. The ordinary agriculturists, the masses dwelt in villages. Brahmins who were learned or were in the service of the king lived in the cities, though the poorer sections liked village-life. Recluses lived in secluded settlements or in hermitages though this exposed them to

attacks of savages, as is well known to all readers of the Rāmāyaṇa. As in the case of the Jātakas, castevillages existed in the days of the Mahābhārata, and we have references to Brahmin villages (Anuśāsana 68), Kṣatriya villages or Sūdra villages.

VII. CRAFTS AND THEIR DEVELOPMENT GUILDS

In regard to the various crafts, we find innumerable references in the Rāmāyaṇa. They are mentioned in more than one place and we find lists of the craftspeople in the Bālakāṇḍa (ch. XIII), e.g., on the eve of Daśaratha's Yajña, in the Ayodhyākāṇḍa (ch. XXCIII), in connection with Bharata's expedition to bring Rāma, back when the craftsmen join him (also Ayodhyā), ch. 80 and in various other scattered places. The first mentions craftsmen (karmāntikān), skilled artisans (śilpinaḥ, śilpakāras, vardhakis and khanakas); ch. 79 of the Ayodhyākaṇḍa speaks of the śilpi-varga while ch. 80 gives us a long list of craftsmen. A fuller list of the higher and the lower crafts is supplied by the 83rd chapter of the Ayodhyākāṇḍa.

From all these we prepare a full list of the higher and lower crafts.

Sūtra-karma-viśāradāḥ Khanaka. Karmāntika. Sudhākāra. Vaṃśakāra. Manikāra.

42-1334B

Vardhaki Yantraka Sūpakāra. Vṛkṣakāra. Carmakāra. Dantakāra. Rajaka.

Kumbhakāra.

Ausņodaka. Dhūpika.

Suvarņakāra.

Kambalakāra.

Māyūraka.

Krākacika.

Vedhaka.

Rocaka.

Tantuvāya.

Snāpaka.

Vaidya.

Gandhopajīvī. Sastropajīvī.

Kaivartaka.

Sailūṣa. Nata.

Tālāvacara.

Mārgasodhaka.

Sauņģika.

Raksaka.

The Mahābhārata refers in many places to various crafts. No complete list of the crafts is furnished by any single chapter, but from random references we may make up a list. Thus the Ādi parva (ch. 207), describing Yudhiṣṭhira's building of Indraprastha refers to the various skilled artisans. Some chapters of the Anuśāsana-parva mention various craftsmen in connection with mixed castes.

Weavers—including makers of blankets, silk manufacturers, makers of woollen cloths and carpets.

Goldsmiths—workers in base-metal including

karmāras.

Carpenters.

Wine-makers.

Potters.

Various grades of cooks.

Soup-makers.

Innumerable grades of menials and servants

Elephant tamers.

Grooms.

Charioteers.

Various grades of masons.

House-builders.

Basket-makers.

Tanners.

Makers of weapons, mails. Toilet-makers.

bows, arrows.

Workers in ivory.

Sellers of garlands.

Washermen.

Barbers

Bath-servants.

(male and female).

Whether these crafts were organised in guilds, it is difficult to determine, but their leaders are mentioned prominently in various places of the Rāmāyana showing their importance. On all important occasions the Naigamas (Ayo., ch. 14, also 89) are mentioned, as well as the Gana-vallabhāh (Ayo., ch. 81). In more than one place, we find the mention of the Sreni-mukhyāh (Ayodhyā,—ch. 26), and in the Ayodhyā-kānda, we find the Rajakartarah accompanied by the guilds (ch. 79). Again on the occasion of Rāma's entry into Ayodhyā, he is welcomed by the Sreni-mukhyāh (Lankā ch. 129).

In the Mahābhārata, we find similar references to the Srenis and their organised character. In the Adi and Santi-parva chapters, we have innumerable references to Srenis, to Paurasanghātas, and their consolidation through Sreni-mukhyas. In many of the chapters dealing with the conquests of Yudhisthira and of Duryodhana (on the occasion of his Vaisnava-yajña). not only have we mention of Srenis, paying tribute on being conquered, but we have references to their leaders attending the ceremonies. Duryodhana after his defeat at the hands of the Gandharvas, is abashed to meet the

Sreni-mukhyas (see Vana—ch. 248). We find men discarding their Srenibandha, condemned. The Srenis, moreover, are described as bearing arms and in one chapter of the Mahābhārāta, Āśrama-vāsika Parva (ch. 7) we have mention of the troops of the Srenis (Srenī-bala).

Detailed information is however lacking, not because the Epic poets were merely writing from their imagination, but because they dealt with facts which were so well known that details were regarded as unnecessary.

VIII. GENERAL WEALTH OF THE COMMUNITY

The general wealth of the community is apparent from the gorgeous descriptions of towns, royal palaces, or the accounts of gifts to Brahmins and sages by kings. India in the days of the Rāmāyaṇa had a rather small population, and the natural wealth of the country was very great, as would appear from these descriptions. Even ordinary people possessed large herds of cows, while their rich fields supplied their wants.

The Rāmāyaṇa is full of such accounts of gifts. Gold seems to have been plentiful, and we hear of gifts of Niṣka (Ayodhyā. 72), Hiraṇya and Suvarṇa (Bāla. 78, Ayo. 76, Uttara. 77, Lankā. 130). In more than one place, we find mention of articles of use made of gold, and the word Jāmbunada is used more often to denote gold (also Sātakumbha and Jātarūpa).

The same is also true of the Mahābhārata, as will appear from the different portions of the Sabhā-parva

(see Sabhā, ch. 9, 11, 3, 4, 47, 49). The various chapters mention Hiranyas and Suvarnas, and we have references to pots, vessels, and armours of gold, not to speak of royal thrones (see Vana. 253). We have mention of the Niskas in the Sabhā-parva (see Ch. 53). Yudhisthira is described as giving away Niskas to Snātakas, and in another place we are told that he gave away crores of Niskas to Brahmins after his Aśvamedha.

The chapters of the Anusasana Parva repeatedly extol gifts and in these we find an idea of the wealth of the country (see Anu., Ch. 61-69, 71-80). The general wealth of the community is apparent from the descriptions of Samajas and feasts, rich dishes, wine drinking (Madhu and Maireya. Rām. Kis., 30) and the use of garlands and ornaments by all classes.

IX. OCCUPATIONS; AGRICULTURE; LOWER ARTS

Agriculture was not looked down upon. We find a Brahmin Trijata, ploughing with plough and spade, and he receives gifts from Rāma. Even Janaka is described as being engaged in ploughing.

The tendency of Brahmins to look down upon these lower occupations is found in some of the chapters of the Mahābhārata. They confined themselves to the Vedic studies, and allied pursuits. Yet deviations were numerous. The Mahābhārata contains at least three instances of Brahmins taking up the military profession (Drona, Kṛpa and Aśvatthāmā). We have moreover the story of a Brahmin hunter Gautama.

As a rule such deviations were condemned. Thus Dhṛṣṭadyumna excused himself for killing Droṇa a Brahmin since he was not a Brahmin by occupation. In the Sānti-parva (ch. 77), Yudhiṣṭhira is asked by Bhīṣma, not to grant these Brahmins the immunities attached to that caste but they are to be placed on the footing of men of the caste whose professions they followed. In the Anuśāsana-parva we have not only an enumeration of mixed castes (48) but find an attempt to fix a relation between caste and craft as we find in Manu and other Smṛtis.

CHAPTER II

1

CONCEPT OF ROYAL DUTY; ENCOURAGEMENT TO AGRICULTURE AND ARTS

We pass on next to a discussion of the popular ideas, as regards the duty of kings in relation to the material prospects of their subjects. In regard to this, the general evidence of the Epics goes to confirm the view, that as in the Vedic Age, the kings and rulers of this period also thought it their duty to do every thing for the encouragement of agriculture, arts and industries. It was one of the most important duties attaching to the royal office. The idea of Palana, which we find in the two Epics, is in itself a peculiar conception of the Indian thinkers. The functions of the State were conceived as being more social and economic than political. The fruition of the Trivarga depended on the state. Every man desired to realise his Dharma. Artha and Kāma, which comprised all the natural desires and wants, which underlie all human efforts. It was the duty of the state and of the king, to help subjects of all classes, castes and sections, partly by the chastisement of wrong-doers and the granting of even-handed justice, and partly by giving direct encouragement to the efforts of classes.

Furthermore, as the prosperity of the king depended on the prosperity of his subjects, self-interest made him alive to the necessity of paying the greatest possible attention to their material welfare.

Consequently, in both the Epics we find that the greatest attention was paid to the various productive industries, and the classes who were engaged in production.

II. Vartta Lauded.—The science of Vartta, which concerned itself with the various branches of production, as understood in these days, was given a high place. Far from confining their attention to the sacred lore, or works on kingcraft, the rulers of those days not only attached an importance to it, but took care to study it thoroughly. As in the Mahābhārata, so in the Rāmāyaṇa, a high place is assigned to Vārttā. Thus, in the Bālakāṇḍa we find the king studying Vārttā along with Ānvīkṣakī, while in the Ayodhyā kāṇḍa (ch. 103), Rāma impressing upon Bharata the duty of protecting agriculturists and traders, describes Vārttā as the source of life.

In the Mahābhārata also, we find the importance of Vārttā more than emphasised. Thus in Sānti ch. 59, we find Vārttā standing side by side with Trayī and Ānvīkṣakī (59—33). Its importance is further described in ch. 89 (7th śl.). The author of the 68th chapter goes further than this and expressly says that "Vārttā is the basis or root of this universe" (Vārttāmūlo Hayam lokah (68—35). In the 89th chapter, agriculture, cattle-rearing and trade are described as the source of the life of this world (Kṛṣi-gorokṣā-vāṇijyam lokānāmiha jīvanam. In the Vanaparva, the same

teaching comes from Hanūmān who tells Bhīma that Vārttā upholds the universe (Vārttayā dhāryate sarvaṃ dharmair-etair-dvijātibhiḥ) and that of the great branches of knowledge, Vārttā is one (Vana, ch. 57—śl. 30-31). It is needless to enumerate passages extolling Vārttā, but those already quoted, go to show its importance in the eyes of kings and people.

III. THE IDEAL OF A PATERNAL GOVERNMENT

Not only was Vartta given a high place, and studied by kings and people, but the princes thought it their bounden duty to encourage the various branches of Vārttā and to help the classes engaged in these (e.g., agriculture, cattle-rearing, trade and the crafts). in the Rāmāyana and the Mahābhārata, we find sages and law-givers enjoining upon kings this duty on innumerable occasions. In the Rāmāyana, Rāma asks Bharata whether he is paying attention to the prosperity of the classes engaged in agriculture, commerce and cattle-rearing. In the Mahābhārata, such passages are common and occur in almost all chapters, dealing with instructions as to royal duty. Thus, Narada draws attention to the necessity of properly protecting the people and asks Yudhisthira whether the agriculturists were happy as well as the other sections of the industrial population (Sabhā, ch. V, 76 to 84); whether the reservoirs contained water, whether seeds and other things were supplied to them, whether loans were granted, and whether the 'five' watched over the

village. Hanuman gives Bhima the same advice. The innumerable chapters of the Santi-parva all concur in emphasising this active duty of protection (see 56, 87, 89) on the part of a king. The Mahābhārata thinkers are unanimous in imparting to the head of the state, not only the duty of protection and justice, but the active duty of ensuring the continuance of life and finding out the means of sustenance for all classes the people. Sacerdotalism emphasised the moral and spiritual relation subsisting between the king and the people. The king was to receive the fourth part of the virtues and merits of the people. Similarly if he failed to protect, if his people suffered from tyranny, oppression or poverty, he incurred sin. Again, if he failed to carry out the contractual duty attaching to his office he was looked down upon as a thief or as the Mahābhārata thinkers call it. a " bali-sadbhaga-taskara" who suffered in this world and in that beyond (See Santi, chs. 90-91). It is impossible to quote all these passages, which are attributed to sages like Utathya, Vāmadeva, and some others, who propounded the details of such a theory but the same view is again described in detail in the 132nd chapter of the Santiparva. Everything thus depended on the proper discharge of royal duties. The king created the age, good and evil depended on him. If he did his duties he was worshipped as a god, if not, denounced as a devil.

In lieu of these services, the king received taxes which were regarded as his wages, an idea which is found in the Dharmasūtras. The Sānti prava expressely says that the sixth part which the king received from his subjects was his remuneration for the protection granted to them (sa ṣaḍbhāgamapi prājña tāsāmevābhiguptaye).

Such was the conception of royal duties, and such were the relations supposed to subsist between the king and his subjects so far as their material existence was concerned. The Epic authors describe this relation by means of innumerable similes. It is impossible to discuss all these in detail, but we may mention only one or two points. Thus, in one passage, we find the ideal king compared to the mother of his subjects and kings are called upon to perform the duties of a mother to her children. As a woman in pregnancy thinks only of the welfare of the child in the womb, so should the king think of the happiness of the people (See Santi, ch. 56, śl. 44; Bhavitavyam sadā rājñā garbhinī sahadharminā etc.). In another passage we find the king spoken of as the mother of the people (mātā pitā gurur-goptā vahnir-vaisravaņo yamah I Sapta rājño guņān-etān Manur-āha prajāpatiķ || Sānti ch. 113).

In other places, we find the paternal concept of royalty described. The king was supposed to stand in relation to his subjects as a father. In more than one place we find the king likened to a father (See ch. Sānti, 57, śl.—33; Puttrā iva piturgrhe viṣaye yasya mānavāḥ | Nirbhayā vicariṣyanti sa rājā rājasattamaḥ || Again in ch. 139—Pitā hi rājā rāṣṭrasya prajānām yo'nukampanaḥ).

This paternal ideal gradually developed and the king became the natural guardian of the weak, the orphan, the widow, and it also devolved on him to maintain the Srotriya, or those who were without any means of livelihood (See ch. 86, śl. 24). As we shall see later on, this paternal ideal developed in the days of Kautilya and the Maurya Empire and its noblest exponent was the Emperor Aśoka¹ himself.

To perform all these duties, the king was entitled to the customary revenues, which included a tax on agricultural and animal produce, on gold, duty on articles of import and export, fines, treasure-troves, lost articles, and various occasional revenues. The social contract theory (Sāntiparva ch. 68) enumerates all these taxes.

In normal times, the king exacted these taxes without injury to the people. In the chapters of the Sāntiparva, Bhīsma directs Yudhisthira to imitate the leech or the bee, in collecting taxes, i.e., without detriment to taxpayers, and also that they might not feel (See ch. [71, Sānti.).

Extraordinary taxes were illegal but could be levied in extraordinary circumstances only, provided the people agreed to pay, when the king asked them to do so by showing causes for it.

IV. LABOUR AND WAGES.—We may say here something as to the condition of labour or the social ideals as to the relation between work and wages.

¹ See "Governmental ideas in Aucient India" by the author, "Calcutta Review," 1922.

In regard to labour, the Epic thinkers thought of fixing a relation between castes and crafts. Each of the castes not only had its attached duties but its members had certain specified means of livelihood. In course of time these were subjected to revision, and the rise of mixed castes led to an elaboration and modification of the earlier relation between castes and crafts. These are too well known to be repeated here.

But in one important passage we find an attempt to fix the proportion of profit between the capitalist and the labourer who worked under him. Thus, we are told that "a Vaisya or Sūdra servant tending a herd of 6 kine, was to get the milk of one; for tending a herd of 100, he was to get one pair; in trade, he was to get 1-7 of the profits; in case of his being employed in the trade of horns or hoofs of animals he got 1-16; lastly he was to get 1-7 when he worked as a cultivator on other's land." 1

(Saṇṇām-ekām piveddhenum śatācca mithunam haret | Labdhācca saptamam bhāgam, tathā śṛṅge kalā khure | Sasyānām sarva-vījānām-eṣā sāmvatsarī bhṛtiḥ) |

Sān., ctih. 60-śl. 25, 26.

¹ In Kautilya, we find a similar proportion, allotted to workmen. But he prescribes only a general share of 10 per cent. for workmen and labourers, when no wages were specified (Kau. p. 183).
